District Court of the United States,

DISTRICT OF MASSACHUSETTS.

IN EQUITY.

No. 301 (C. C. 911).

UNITED STATES OF AMERICA

v.

UNITED SHOE MACHINERY COMPANY, OF NEW JERSEY, ET AL.

EXHIBITS FOR DEFENDANTS.

DEFENDANTS' EXHIBIT 10.

[Put in Evidence, page 450.]

Heeling Machine Department. (1305)

Lease and License Number .

This Lease and Agreement made at Boston, in the State of Massachusetts, this day of 19 , between the United Shoe Machinery Company, a corporation organized under the laws of the State of New Jersey, having an office in said Boston, hereinafter referred to as the lessor, of the one part, and of in the State of , hereinafter referred to as the lessee, of the other part:

Witnesseth, that the lessor, in consideration of the covenants and agreements on the part of the lessee herein contained, does hereby lease to and license the lessee under any letters patent belonging to the lessor or under which the lessor has the right to grant such license affecting any inventions which are now or hereafter shall be embodied therein or employed in the operation thereof, to use the machine or machines of the Heeling Machine

Department of the lessor now or hereafter delivered to the lessee and designated by number or numbers in the following schedule, viz. : —

SCHEDULE OF MACHINES.

Automatic Heel Compressing Machine (No. 4, Model), No.
McKay Rapid Nailing Machine, No.
McKay Automatic Heel Loading and Attaching Machine, No.
American Lightning Nailing Machine, No.
Improved National Nailing Machine, No.
McKay Heel Trimming and Randing Machine, No.
McKay Knife Grinding Machine, No.
Smith Heel Trimming Machine, No.
Bussel Heel Trimming Machine, No.
Ultima Heel Trimming Machine, No.

and any duplicate parts, extras, mechanisms and devices relating thereto, or used in connection therewith, now attached to or delivered with the said designated machine or machines, or which may at any time hereafter be obtained from the lessor, or be added thereto by or with the consent of the lessor (the whole of which machine or machines, duplicate parts, extras, mechanisms and devices, held by the lessee under these presents, whether now or hereafter delivered to or in the possession of the lessee, is hereinafter referred to as the "leased machinery"), subject to the conditions hereinafter contained.

And that the following are agreed to as conditions of the lease and license of the leased machinery, all of which the lessee covenants and agrees to keep and perform : —

One. The leased machinery shall at all times remain and be the sole and exclusive property of the lessor, and the lessee shall have no right of property therein, but only the right to use the same, upon the conditions herein contained. The leased machinery shall be used only by the lessee himself or by operatives in his direct employ, and only in the factory now occupied by him at in the State of . The leased machinery shall not be transferred or delivered or sublet to any other person or corporation, and neither the lease nor the license hereby granted can be assigned by the

lessee by his own act or by operation of law. If the lessee becomes insolvent or bankrupt, or has a receiving order made against him, or makes or executes any bill of sale, deed of trust or assignment for the benefit of his creditors, or if a sale, mortgage, lease or removal of the leased machinery, or any part thereof, be made or attempted, or if any distress or execution or attachment be levied thereon, then and in each such case any or all leases of or licenses to use machinery then existing between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, shall at the option of the lessor cease and determine, and the possession of and full right to and control of all machinery the leases or licenses of which are so terminated shall thereupon revest in the lessor free from all claims or demands whatsoever. The lessor and its agents and employees shall at all times be given access to the leased machinery for the purpose of inspecting it or watching its use and operation, or of altering, repairing, improving, or adding to it, or determining the nature or extent of its use, and the lessee shall afford all reasonable facilities therefor.

Two. The lessee shall at all times and at his own expense keep the leased machinery in good and efficient working order and condition, and shall not permit any one to injure or deface or remove any plate, or dates, numbers, or other inscriptions now or hereafter impressed on or affixed to the leased machinery by the lessor. The lessee shall obtain from the lessor exclusively, and shall pay therefor at the regular prices from time to time established by the lessor, all the duplicate parts, extras, mechanisms and devices of every kind needed or used in operating, repairing, or renewing the leased machinery, and the same shall form part of the leased machinery, and the lessee shall not otherwise make or allow to be made any addition, subtraction or alteration to, from, or in the leased machinery without the consent in writing of the lessor, nor interfere with the proper operation of the same.

Three. The lessee shall pay all taxes and assessments which shall be assessed in respect to the leased machinery or other machinery of the lessor held by the lessee under lease or license upon whomsoever assessed. All taxes or assessments in respect to leases,

licenses or agreements covering machinery, or the rights to payments thereunder, shall be construed, for the purposes of this article, to be assessed in respect to the machinery itself. In case at any time any unapportioned tax or assessment shall be assessed to the lessor in respect in part but not wholly to machinery of the lessor in the possession of the lessee the lessee shall pay to the lessor such proportionate part of the total amount of said unapportioned tax or assessment as the fair valuation, to be determined by the lessor, of said machinery of the lessor in the possession of the lessee bears to the fair valuation, to be determined by the lessor, of all machinery (excepting machinery, if any, in the lessor's own possession) in respect to which the unapportioned tax or assessment has been assessed: provided, however, that if such unapportioned tax or assessment includes any tax or assessment in respect to tangible property in the lessor's own possession the amount thereof, based, at the established rate, upon the fair valuation, to be determined by the lessor, of such property, shall first be deducted and the lessee shall pay his proportionate part as aforesaid of the balance only of said unapportioned tax or assessment after such deduction has been made.

Four. The lessee shall use the leased machinery to its full capacity for doing all work in manufacturing, preparing and attaching all heels and top-lifts and in manufacturing and preparing all soles and taps made or prepared or attached in his factory in the manufacture or preparation or attaching of which it can be used, and the leased machinery shall be used for no other purpose.

Five. The lessee shall pay to the lessor immediately upon the execution hereof as a lease premium the sum of dollars and the lessee shall also pay to the lessor on the last day of each calendar month as rent or royalty the sum of one-half of one cent for each pair of heels manufactured or prepared or attached during the next preceding calendar month in any way, whether wholly or in part, by the aid of the leased machinery or any part thereof: **provided, however, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the rent or royalty due for the use of the leased machinery for**

the next preceding calendar month the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from such rent or royalty due for such preceding calendar month.

Six. In case any Compressing Machine (or Machines) hereby leased shall be used for compressing or otherwise operating upon top-lifts, soles or taps the lessee shall pay to the lessor independently of and in addition to the rental or royalty provided for in Article Five hereof a rental or royalty of one-quarter of one cent for each pair of top-lifts, soles or taps so compressed or operated upon. Such royalty shall be paid at the same time and in the same manner as the royalty provided for in said Article Five and shall be subject to discount for prompt cash payment, as in said Article Five provided.

Seven. The lessee guarantees that the rent or royalty herein provided (less all abatements) shall amount to at least dollars during each year embraced by this lease and at the end of each year the lessee shall pay to the lessor the amount, if any, by which the rent or royalty paid for said year is less than such guaranteed rent or royalty; provided, however, that if in any year the factory of the lessee remains wholly idle for any entire calendar month, then the amount of rent or royalty guaranteed for that year shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle.

Eight. The lessor may attach to the leased machinery, or any thereof, an indicator or indicators to register the number of revolutions or movements of any part or parts thereof, and the lessee shall not allow any person (other than the lessor or its agents) to disturb or interfere with such indicator or indicators. In case any indicator thus attached shall from any cause cease to correctly indicate or register, or shall be disturbed or out of repair, or if the glass covering any such indicator shall be removed or broken or injured, then and as often as the same shall happen the lessee shall immediately by writing notify the lessor and at the same time explain the circumstances under which the same has happened. In case any such indicator ceases to indicate, or becomes or remains inaccurate, or the glass covering becomes or remains removed,

broken, or injured, because of any fault of the lessee or any one in his employ, or because of the failure of the lessee to give promptly the notice hereinbefore provided for, then, without prejudice to any other rights of the lessor hereunder, the lessee shall pay the lessor as rent or royalty, without the right to any discount, one-half of one cent per pair for each pair of heels, top-lifts, soles or taps, in the manufacture or preparation or attaching of which the leased machinery or any part thereof shall have been used. The lessee shall keep full and accurate accounts, independently of any indicators that may be placed upon the leased machinery, showing the number of heels, top-lifts, soles and taps, in the manufacture or preparation or attaching of which the leased machinery or any part thereof shall have been used, and shall allow the lessor at all times, by its agents or attorneys, to examine and to take copies of such accounts and entries of the lessee as may serve to determine the total number of such heels, top-lifts, soles and taps, and the lessee shall produce all such accounts and entries upon request. The lessee shall require each of his operators upon the leased machinery or any part thereof to keep upon blanks or blank books to be furnished by the lessor accurate daily records of the number of heels, top-lifts, soles or taps, in the manufacture or preparation or attaching of which he has used the leased machinery or any part thereof, and shall require his operators to sign such records, and, if requested so to do by the lessor, shall verify the same under oath. The lessee shall send to the office of the lessor in Boston, on or before the fifth day of each calendar month, the original records for the next preceding calendar month kept by his operators as above provided for; and in case, in any calendar month, none of the leased machinery has been used, the lessee shall notify the lessor in writing of that fact, on or before the fifth day of the next succeeding calendar month. The lessee shall also furnish any further information which may be called for in relation to the leased machinery or the use thereof.

And that the following agreements, stipulations and provisions are agreed to: —

Nine. If at any time the lessee shall fail or cease to use exclu-

sively heel attaching machinery held by him under lease from the lessor, for attaching the heels of all boots, shoes and other footwear made by or for the lessee the heels of which are attached by the aid of machinery, the lessor, although it may have waived or ignored prior instances of such failure or cessation, may at its option terminate forthwith by notice in writing any or all leases of or licenses to use machinery of any or all the kinds mentioned by name in said schedule then existing between the lessor and the lessee (whether as the result of assignment to the lessor or otherwise) and the possession of and full right to and control of all machinery, the lease of which is so terminated, shall thereupon revest in the lessor, free from all claims and demands whatsoever.

Ten. This lease and license shall continue, unless sooner terminated by the lessor because of breach thereof on the part of the lessee, or otherwise as herein provided, for seventeen years from the date hereof. But if any breach or default shall be made in the observance of any one or more of the conditions herein contained or contained in any other lease or license agreement subsisting between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise and expressed to be obligatory upon the lessee, the lessor shall have the right by notice in writing to the lessee to terminate forthwith any or all leases of or licenses to use machinery then in force between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and this notwithstanding that previous breaches or defaults may have been unnoticed, waived, or condoned by or on behalf of the lessor. If, upon the expiration of the full term of this lease, the lessor does not request the return of the leased machinery, then the leased machinery shall continue to be held and used under and in accordance with the conditions of this lease and license, which shall thereupon be extended indefinitely as to term; but thereafter either the lessee or the lessor, upon sixty days' notice in writing to the other, may terminate this lease and license, whereupon the leased machinery shall be delivered forthwith to the lessor, as herein provided. Upon the expiration of this lease and license or any extension thereof or its termination by notice or by reason of any default

on the part of the lessee as to the terms of this lease and license or any other lease and license from the lessor, or otherwise in any manner whatsoever, the lessee shall forthwith deliver the leased machinery to the lessor at Beverly, Massachusetts, in good order, reasonable wear and tear alone excepted; and without prejudice to any other rights or remedies of the lessor hereunder, shall pay to the lessor upon demand such sum as may be necessary to put the leased machinery in suitable order and condition to lease to another lessee; and the lessee for himself, his heirs, executors, and administrators, hereby grants to the lessor, its successors and assigns, full right, power and authority to enter upon the premises and into any factory, room, or any place where the leased machinery, or any part thereof, may be, and take possession thereof, and take away the same.

Eleven. A notice in writing, signed by the president, a vice-president, the treasurer or the assistant treasurer of the lessor, or by any assignee of the lessor's rights hereunder, and posted by prepaid letter, addressed to the lessee or delivered at his usual or last known place of abode or business, that the lease and license hereby granted is determined or shall be determined at the expiration of a certain period, shall be a sufficient determination of the lease and license from the time of posting or delivering such notice, or from the expiration of the period therein mentioned, as the case may be. Any termination of this lease and license shall not release the lessee from his obligation to pay rent or royalty for the period prior to such termination, and shall be without prejudice to any other rights or remedies which the lessor may have for violation of contract, use of machines without right, or use of patented inventions without license.

Twelve. The lessee admits the validity for the full term expressed in the grant thereof (and every extension and renewal thereof) of each and every of the Letters Patent of the United States of America, owned by the lessor or under which it is licensed, any of the inventions of which are or hereafter may be embodied in the leased machinery. The lessee also agrees that he will not directly or indirectly infringe or contest the validity for the full term expressed

in the grant thereof or of any extension or renewal thereof, of any of the Letters Patent referred to in the Schedule of Patents hereto annexed or the title of the lessor thereto. The expiration of this agreement or any extension thereof or the termination or cesser of the lease and license hereby granted shall not in any way affect the provisions of this clause, or release or discharge the lessee from the admissions and estoppels herein set forth.

Thirteen. None of the terms or conditions of this lease and license shall be held to have been waived by any act or knowledge of the lessor, its agents or employees, but only by an instrument in writing, signed by the president, a vice-president or the treasurer of the lessor.

Fourteen. The term "lessor" shall include the said United Shoe Machinery Company and its successors and assigns. All the conditions and agreements binding on the lessee shall be binding on and enforceable against his legal representatives. In the construction of this instrument, words relating to the number and gender of the parties shall be read according to their real number and gender.

In witness whereof, the parties hereto have duly executed this instrument in duplicate, the day and year first above written.

No. 517,947, dated April 10, 1894.

And, Whereas, the Lessee desires a license to use the inventions, or some of them, which are patented in and by the above-recited Letters Patent, and also desires a lease of the machines which are designated by their numbers in the schedule of machines following, viz. : —

SCHEDULE OF MACHINES.

Ideal Lasting Machines.	No. , No. , No. , No. , No.
Rapid Lasting Machines (foot power)	No. , No. , No. , No. , No.
Rapid Lasting Machines (foot power)	No. , No. , No. , No. , No.
3 Rapid Power Lasting Machines,	No. *51*, No. *55*, No. *56*, No. , No.
Rapid Loose Tackers, with Hoppers,	No. , No. , No. , No. , No.
6 Rapid Loose Tackers, with Hoppers, No. *411-412*.	No. *405*, No. *406*, No. *399*, No. *400*,
Nicking Machines,	No. , No. , No. , No. , No.

The said machines being the property of the Lessor.

Now, Therefore, the Lessor, in consideration of one dollar and other valuable consideration to it paid by the Lessee, in full for rental and royalty hereunder, the receipt of which is hereby acknowledged, and in further consideration of the agreements and conditions hereinafter contained, on the part of the Lessee to be kept and performed, doth lease unto the Lessee the machines designated by their numbers in the foregoing Schedule of Machines, and doth license the Lessee and the operatives in his employment to use the machines hereby leased, and also such of the inventions patented as aforesaid as are embodied in the said machines, or

either or any of them, but upon the agreements and conditions hereinafter set forth; and this lease and license is granted by the Lessor and accepted by the Lessee on the express condition that the Lessee shall faithfully keep and perform all the agreements and conditions herein contained on his part to be kept and performed, and upon breach of the same, or either or any of them, by the Lessee, the Lessor, notwithstanding any express or implied waiver of any prior breach, may at its option cancel and terminate this lease and license, and upon written notice thereof by the Lessor to the Lessee or to any one in the possession or apparent control of the machines hereby leased, or either or any of them, this lease and license shall terminate, and possession of the said machines shall thereupon re-vest in the Lessor;

And the Lessee hereby agrees to keep and perform all the following conditions of this lease and license: —

First. The Lessee hereby agrees to use, and is hereby licensed to use, the machines hereby leased and the inventions patented as aforesaid only in his factory in *Chicago*, in the State of *Illinois*, and agrees to keep the said machines in working order at his own expense, and to purchase of the Lessor or its agents all parts for repairing the machines hereby leased, and all tacks to be used in the loose tackers and hoppers hereby leased, and agrees not to add to or subtract from the said machines any part or mechanism whatever, now or hereafter organized or connected therewith by the Lessor, nor to make nor allow to be made any change or alteration in the same, except by an authorized agent or employee of the Lessor, nor to remove or deface any dates, numbers, or inscriptions now or hereafter impressed thereon or affixed thereto by the Lessor.

Second. The Lessee hereby agrees to permit the agents and inspectors of the Lessor, at all reasonable times, to have convenient access to the machines, to examine and inspect the same and the use thereof, and to add improvements to or alter the machines as the Lessor may see fit; and the agreements and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, and to all patented inventions here-

after embodied therein, with the same effect as if the patents therefor were included in the foregoing schedule of patents.

Third. The Lessee agrees that he will not use or permit the use of the machines hereby leased, or either or any of them, on boots or shoes which are to be partially or wholly completed by the aid of any sole- or welt-sewing machine not leased to him by the Lessor (except that they may be used in lasting boots and shoes known in the trade as "McKay Sewed"), and that he will not use or permit the use of any of the tackers hereby leased on boots or shoes which have been partially or wholly lasted by the aid of any lasting machine not leased to him by the Lessor.

Fourth. This lease and license is not assignable by the Lessee by his own act or by operation of law; and all the rights and interests which under this instrument, and by reason of the ownership of said machines and patents and patent rights belong to the Lessor, shall be deemed to belong to and may be enforced in the names of the successors and assigns of the Lessor, and all the agreements and conditions binding on the Lessee shall be binding on his executors or administrators.

Fifth. It is agreed that the numbers of the machines named in this lease may be entered herein by the Lessee after signing; and, in case the Lessee shall require more than one machine, it is agreed that the termination of words relating to the machines shall be construed and considered as written in the singular or plural as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained.

Sixth. The Lessee agrees that he will not in any way violate or infringe or contest the validity of any of the patents under which he is hereby licensed, or the sufficiency of their specifications, or

the validity of the title of the Lessor to said patents, or any of them.

Seventh. The following are also agreed to by the parties as conditions of this lease and license: —

(a) That the power conveyed by this lease and license is only the right to use the said machines, and not the right to make or sell any machine embodying the inventions patented as aforesaid, or any of them; and that a transfer or removal of the machines hereby leased, or either or any of them, can only be made with the consent of the Lessor; and that if the Lessee is or becomes at any time insolvent or bankrupt, or shall make an assignment for the benefit of his creditors, or if a sale, lease, transfer, or removal of said machines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Lessee, without the written consent of the Lessor, this lease and license shall thereupon terminate and expire, and the Lessor may take possession of said machines without the Lessee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for lease and royalty under this instrument.

(b) That in case the Lessee refuses or neglects to perform, or violates, any of the conditions in this lease and license contained, the Lessor, notwithstanding any express or implied waiver of any prior breach, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon revest in the Lessor free and discharged of this lease and license; and the Lessor, or its authorized agent or agents, may thereupon enter any premises where said machines may be, and may take and remove them, and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease and license.

(c) That this lease and license shall continue (provided the Lessee complies with the agreements and conditions herein con-

tained) until the expiration of all and every the Letters Patent referred to in the foregoing Schedule of Patents, or any extensions or renewals of the same; and upon the expiration thereof the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased in good order, natural wear and tear alone excepted.

In witness whereof, the Lessor has caused these presents to be signed and its corporate seal to be affixed hereto by its *Treasurer*, and the Lessee has set his hand and seal hereto the day and year first above written.

[SEAL] GOODYEAR SHOE MACHINERY COMPANY,
by Geo. W. Randall, Treas.

Lessee will please sign here. ☞ FLORSHEIM & COMPANY [SEAL]
Milton J. Florsheim, Pres.

[Attached to Defendants' Exhibit 33.]

REQUEST.

To the Goodyear Shoe Machinery Company, No. 158 Summer Street, Boston, Mass.

The undersigned, Lessee under Lease No. *124*, granted by the Copeland Rapid Laster Manufacturing Company, dated *June 2*, 189*4*, hereby requests you to terminate said lease, and to grant him a new lease [Form 595] of the lasting and other machines referred to in said Copeland lease, upon the terms mentioned in your circular letter dated May, 1895.

And the undersigned herewith returns his said Copeland lease for cancellation, and sends a check for *$300.* as consideration for the grant of said new lease.

Dat this *seventh* day of *January*, 1897.

[Address] FLORSHEIM & COMPANY
Milton J. Florsheim, Pres.

DEFENDANTS' EXHIBIT 34.

[Put in Evidence, page 974.]

[Stamped :]
From Goodyear Shoe Mach'y Co.
51–53 Franklin St. Chicago,— Illinois.
George E. Milner.

[Duplicate Form 1291.] *Chicago, Ills.* Dated *June 25, 1894*

We hereby propose to take a lease of the machinery mentioned below, of the Copeland Rapid Laster Manufacturing Company, according to the form of lease adopted by the Company therefor, and *we* agree to pay upon delivery of the said machinery, the sum of *$300.* as consideration for the delivery of said lease, for the expenses of setting up said machinery, and for possession under the lease of said machinery.

One Power Lasting Machines. *#55 July 3/94*
Lasting Machines.
Two Loose Tackers. *#399, 400.* "

No title to the above mentioned machinery is acquired other than is given in the lease aforesaid.

A competent man is to be sent to set up said machinery at the expense of the said Company.

Freight and transportation charges on said machinery from Boston, Mass., shall be paid by the lessee.

How shall we ship, by freight or express? *"Blue Line".*

Applicant sign here. FLORSHEIM & Co.

Send us pattern of the innersole of the largest and widest of each style men's shoe you make. This is necessary before the machine can be shipped, as the toe wipers are made from these patterns.

We accept the above proposition, and promise to deliver the lease and machinery as specified therein.

Boston, July 2 1894

COPELAND RAPID LASTER MANUFACTURING COMPANY,
By S. V. A. Hunter Treasurer.

[Duplicate Form 1291.] *Chicago, Ills.* Dated *June 25, 1894*

And, Whereas, the Lessee desires a license to use the inventions, or some of them, which are patented in and by the above-recited Letters Patent, and also desires a lease of the machines which are designated by their numbers in the schedule of machines following, viz. : —

SCHEDULE OF MACHINES.

Rapid Lasting Machines,	No. , No. , No. , No. , No.
Rapid Power Lasting Machines,	No. *51*, No. *55*, No. *56*, No. , No.
Rapid Loose Tackers, with Hoppers,	No. , No. , No. , No. , No.
Rapid Loose Tackers, with Hoppers, No. *411–412*.	No. *405*, No. *406*, No. *399*, No. *400*,
Nicking Machines,	No. , No. , No. , No. , No.
Paper Strip Tackers,	No. , No. , No. , No. , No.

The said machines being the property of the Lessor.

Now, therefore, the Lessor, in consideration of one dollar and other valuable consideration to it paid by the Lessee, the receipt of which is hereby acknowledged, and in further consideration of the agreements and conditions hereinafter contained, on the part of the Lessee to be kept and performed, doth lease unto the Lessee the machines designated by their numbers in the foregoing Schedule of Machines, and doth license the Lessee and the operatives in his employment to use the machines hereby leased, and also such of the inventions patented as aforesaid as are embodied in the said machines, or either or any of them, but upon the agreements and conditions hereinafter set forth; and this lease and license is granted by the Lessor and accepted by the Lessee on the express condition that the Lessee shall faithfully keep and perform all the agreements and conditions herein contained on his part to be kept and performed, and upon breach of the same, or either or any of them, by the Lessee, the Lessor, notwithstanding any express or implied waiver of any prior breach, may at its option cancel and terminate this lease and license, and upon written notice thereof by the Lessor to the Lessee or to anyone in the possession or apparent control of the machines hereby leased, or either or any of them, this lease and license shall terminate, and possession of the said machines shall thereupon revest in the Lessor;

And the Lessee hereby agrees to keep and perform all the following conditions of this lease and license: —

First. The Lessee hereby agrees to use, and is hereby licensed to use, the machines hereby leased and the inventions patented as aforesaid only in his factory in *Chicago*, in the State of *Illinois*, and agrees to keep the said machines in working order at his own expense, and to purchase of the Lessor or its agents all parts for repairing the machines hereby leased, and all the tack strips to be

used in the hand tackers hereby leased, and all tacks to be used in the loose tackers and hoppers hereby leased, and agrees not to add to or subtract from the said machines any part or mechanism whatever, now or hereafter organized or connected therewith by the Lessor, nor to make nor allow to be made any change or alteration in the same, except by an authorized agent or employee of the Lessor, nor to remove or deface any dates, numbers, or inscriptions now or hereafter impressed thereon or affixed thereto by the Lessor.

Second. The Lessee hereby agrees to permit the agents and inspectors of the Lessor, at all reasonable times, to have convenient access to the machines, to examine and inspect the same and the use thereof, and to verify the operator's reports, and to add improvements to or alter the machines as the Lessor may see fit; and the agreements and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, and to all patented inventions hereafter embodied therein, with the same effect as if the patents therefor were included in the foregoing schedule of patents.

Third. The Lessee agrees to keep proper books of account and to make true and complete entries therein, showing the number of pairs of boots or shoes which are lasted, in whole or in part, upon or by the aid of the machines hereby leased, or either or any of them, or by the use of the inventions patented as aforesaid, or either or any of them, and to render an account thereof to the Lessor on or before the tenth day of each month, which account shall specify the number of pairs of boots and shoes so lasted, in whole or in part, as aforesaid; and the Lessee agrees to require each operator on said lasting machines to keep in duplicate in books or on printed forms to be furnished by the Lessor, a daily record of all the boots or shoes lasted, in whole or in part, upon or by the aid of the said machines, one copy of which, containing the record for the calendar month next preceding, the Lessee agrees to send, on or before the tenth day of each month, to the Lessor, and, whenever requested by the Lessor, to make oath to the correctness of said record, and to allow the Lessor, by its agents and attorneys,

to examine and take copies or extracts from the original book or books of account of the Lessee and the record kept by the operator or operators as aforesaid; and the Lessee hereby agrees to send to the Lessor, on or before the tenth day of each month, on a form to be furnished by the Lessor, the number of movements or revolutions of the shaft of each lasting machine hereby leased, as registered by the indicator thereon on the last day of the calendar month next preceding; and the Lessee heaeby agrees to send to the Lessor, on or before the tenth day of each month, in case the machines hereby leased have not been run during the month preceding one of the aforesaid books or forms furnished by the Lessor, marked across the face with the words, "not running", or "not in use".

Fourth. The Lessee agrees to pay unto the Lessor, as rent for the machines hereby leased and as royalty for the use of the inventions patented as aforesaid as hereby licensed, the sum of one cent for each and every pair of boots or shoes lasted, in whole or in part, upon or by the aid of the machines hereby leased, or either or any of them, or by the use of the said inventions, or either or any of them, the rents and royalties for all such boots and shoes lasted as aforesaid during one calendar month to be due and payable on the last day of the calendar month next following; but the Lessor hereby agrees that if the rents and royalties due on the last day of any month shall be paid on or before the fifteenth day of that month, it will, in consideration thereof, grant a discount of fifty per cent. from the rents and royalties above specified.

Fifth. The Lessee agrees that he will not in any way violate or infringe or contest the validity of any of the patents under which he is hereby licensed, or the sufficiency of their specifications, or the validity of the title of the Lessor to said patents, or any of them.

Sixth. The following are also agreed to by the parties as conditions of this lease and license: —

(a) That the power conveyed by this lease and license is only the right to use the said machines, and not the right to make or sell any machine embodying the inventions patented as aforesaid, or any of them; and that a transfer or removal of the machines hereby

leased, or either or any of them, can only be made with the consent of the Lessor; and that if the Lessee is or becomes at any time insolvent or bankrupt, or shall make an assignment for the benefit of his creditors, or if a sale, lease, transfer or removal of said machines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Lessee, without the written consent of the Lessor, this lease and license shall thereupon terminate and expire; and the Lessor may take possession of said machines without the Lessee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for rent and royalty under this instrument.

(b) That in case the Lessee refuses or neglects to perform, or violates, any of the conditions in this lease and license contained, the Lessor, notwithstanding any express or implied waiver of any prior breach, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon revest in the Lessor free and discharged of this lease and license; and the Lessor, or its authorized agent or agents, may thereupon enter any premises where said machines may be, and may take and remove them, and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease and license.

(c) That this lease and license shall continue (provided the Lessee complies with the agreements and conditions herein contained) until the expiration of all and every the Letters Patent referred to in the foregoing Schedule of Patents, or any extensions or renewals of the same; and upon the expiration thereof the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased in good order, natural wear and tear alone excepted.

Seventh. The Lessee hereby agrees that if the indicator attached to any lasting machine hereby leased shall cease to register or indi-

cate correctly the number of movements or revolutions of the shaft to which it is connected, or if the glass covering of the face of the indicator shall be broken, he will not use the said lasting machine, or allow it to be used, until the indicator thereon shall have been repaired or replaced by the Lessor; and agrees that if the glass covering of the indicator shall become broken, or if, for any reason, the indicator shall cease to indicate or register correctly, he will forthwith notify the Lessor in writing thereof; and the Lessee agrees that he will not, nor will he allow anyone, except an authorized agent or employee of the Lessor, to remove the indicator from the said lasting machine, or injure, alter, or in any way tamper therewith, or permit any such alteration, injury, or tampering to take place.

Eighth. This lease and license is not assignable by the Lessee by his own act or by operation of law; and all the rights and interests which under this instrument, and by reason of the ownership of said machines and patents and patent rights belong to the Lessor, shall be deemed to belong to and may be enforced in the names of the successors and assigns of the Lessor, and all the agreements and conditions binding on the Lessee shall be binding on his executors or administrators.

Ninth. It is agreed that the number of the machines named in this lease may be entered herein by the Lessor after signing; and, in case the Lessee shall require more than one machine, it is agreed that the termination of words relating to the machines shall be construed and considered as written in the singular or plural as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained.

In witness whereof, the Lessor has caused these presents to be

signed and its corporate seal to be affixed hereto by its Treasurer, and the Lessee has set his hand and seal hereto the day and year first above written.

DEFENDANTS' EXHIBIT 35.

[Put in Evidence. page 976.]

This Instrument Witnesseth that the United Shoe Machinery Company (hereinafter called the "United Company") the lessor or assignee of the lessor named in seventy-seven (77) several leases heretofore granted to Florsheim & Company, a corporation organized and existing under the laws of the State of Illinois, as lessee, covering certain machinery of the United Company all as set forth in the Schedule hereto attached and marked "Schedule A", said machinery being now in the possession of said Florsheim & Company as such lessee at its factory in Chicago, Illinois, does hereby consent and agree that said Florsheim & Company may permit The Florsheim Shoe Company, a corporation organized and existing under the laws of the State of West Virginia, to use in the factory above mentioned said machinery or any thereof; subject, however, to all the conditions, stipulations, provisions and agreements contained in said leases which shall be binding upon The Florsheim Shoe Company and during the continuance in force of this agreement shall have the same force and effect as if The Florsheim Shoe Company were named in said leases as a joint lessee thereunder with said Florsheim & Company; and that in consideration thereof the said Florsheim & Company and said The Florsheim Shoe Company do hereby jointly and severally covenant and agree to and with the United Company that said The Florsheim Shoe Company will faithfully observe and perform all said conditions, stipulations, provisions and agreements.

It is further agreed that during the continuance in force of this agreement or until the United Company has been notified that The Florsheim Shoe Company has ceased entirely the use of said machinery, all statements and accounts for moneys due or to become due to the United Company from either Florsheim & Company or The Florsheim Shoe Company in respect to said machinery, whether for rental or royalty for the use thereof or for parts or materials supplied for use in connection therewith or otherwise or by virtue of said leases may be rendered to The Florsheim Shoe Company.

Except as herein expressly set forth none of the conditions, stipulations, provisions or agreements contained in the leases above mentioned is hereby in any wise waived or modified, and this agreement may be cancelled and the consent hereby given withdrawn at any time by the United Company by notice in writing addressed to Florsheim & Company at Chicago, Illinois.

Executed in duplicate this 23rd day of April 1910.

THE FLORSHEIM SHOE COMPANY

The Florsheim Shoe Milton S. Florsheim, President.

Private Office Chicago, U. S. A. April 30, 1913

Attention of Mr. Chase:

United Shoe Machinery Co., Boston, Mass.

Gentlemen: Referring to your communication of the 28th inst., in regard to enclosed drafts which you state were apparently prepared by our attorney in Chicago, transferring to The Florsheim Shoe Company the right to use the Goodyear Shoe Machinery Company's machines.

Would kindly ask you to return them to us for our files as we would like to look them over.

We believe we originally sent you two copies executed by ourselves.

Under the three year bonus proposition has your company as yet made any allotment of the certificates? We understood said dis-

tribution was to be made in January but up to this writing we have heard nothing further in regard to the same.

Yours very respectfully,

THE FLORSHEIM SHOE COMPANY,

MSF)W By Milton S. Florsheim President

DEFENDANTS' EXHIBIT 37.

[Put in Evidence, page 977.]

Whereas by Lease and License Agreement L 149, dated January 7, 1897, the Goodyear Shoe Machinery Company, as lessor, did lease to Florsheim & Company, a corporation, as lessee, and did license the said Florsheim & Company to use, in accordance with the terms and conditions in said lease and license Agreement set forth, certain Lasting Machinery, in said Lease and License described, and

Whereas the said machinery, the said Lease and Agreement, and all title and rights of the said lessor therein and thereunder, have, since the said 7th of January, 1897, been transferred to and are now vested in the United Shoe Machinery Company, a corporation organized and existing under the laws of the State of Maine, and

Whereas the said corporation last above mentioned has requested that the rights of the said corporation, under said Lease and Agreement, to use the said machines, shall be transferred to The Florsheim Shoe Company, a corporation organized and existing under the laws of the State of Illinois.

Now, therefore, in compliance with said request the said United Shoe Machinery Company does hereby consent to the delivery of said machines to the said The Florsheim Shoe Company and does hereby transfer to the said The Florsheim Shoe Company the right to use in its factory at Chicago, Illinois, for the unexpired term of said Lease and Agreement the said machines designated by their numbers in the Schedule of machines contained in said Lease and Agreement, subject to all the conditions and agreements made incumbent upon the lessee by said Lease and Agreement, and does hereby accept the said The Florsheim Shoe Company as lessee of

said machines under said Lease and Agreement, in lieu of the said Florsheim & Company. The said The Florsheim Shoe Company, in consideration of the premises and the right hereby granted to it, does hereby covenant and agree with the United Shoe Machinery Company to keep and perform all of the conditions and agreements made incumbent upon the lessee in said Lease and Agreement contained.

In Witness Whereof the said United Shoe Machinery Company as lessor has caused its corporate seal to be hereto affixed and has caused these presents to be signed by its , and the said The Florsheim Shoe Company, as lessee, has caused its corporate seal to be hereto affixed and has caused these presents to be signed by its President, this 23rd day of April, 1908.

[SEAL] By Milton S. Florsheim, Pres.

DEFENDANTS' EXHIBIT 38.

[Put in Evidence, page 989.]

[Stamped:]
Received Apr 20 1900 F. G. K.

[Duplicate Form 1195.] Dated *Chicago, Ill., April 6th*, 1900.

We hereby propose to take a lease of the machinery mentioned below, of the Goodyear Shoe Machinery Company, according to the form of lease adopted by the Company therefor, and *we* agree to pay, upon delivery of the said machinery, the sum of *$1835.00* as consideration for the delivery of said lease, for the expenses of setting up said machinery, and for possession under the lease of said machinery.

One Goodyear Welt Shoe Machine , Chain Stitch, No. *1336*
Goodyear Turned Shoe Machine , Chain Stitch, No.
Goodyear Turned or Welt Shoe Machine , Lock Stitch, No.
One Goodyear Outsole Stitcher , (Lock Stitch, "Rapid"), No. *1098*
Welt Channeller , No.

Outsole Channeller , No.
Turn Channeller , No.
Channel Lip Turner , No.
One Universal Rounder and Channeller , No. *403*
One Sole Layer , No. *147*
Hadaway Stitch Separating Machine , No.
One Automatic Levelling Machine , No. *112*
One Welt Beater , No. *122* Universal
Bobbin Winder , No.
Welt Groover , No.
Welt Splitter , No.
Moulder , No
Channel Opener , No.
Universal Shanking-Out Machine , No.
Inseam Trimmer , No.

It being understood that we agree to send our check for above amount 30 days after machines are installed. It is further understood and agreed that we will return to the Goodyear S. M. Co. the following machines:

Eppler Welter #155
" *Stitcher 161*
" *Insole Chaneler 6*
" *Welt Splitter 90*
Eppler Welt Beater #92
" *Groover & Beveler 105*
" *Bobbin Winder 91*
Eppler Rounder 63
" *Grinder #53*
" *Pricker 58*
" *Channel Opener 4*
Briggs Rough Rounder #—
1 Set B. & S. S. L. Mchs

Upon receipt in Boston of said machines the Gdyr. S. M. Co. agrees to send to us their check for $1835., same being consideration in full for above machines and for any and all claims we have against the United S. M. Co., or any of its departments.

July 17/00 R. R. 76 rec'd 100.
Cr. Dec. 26/00 Eppler 1735.

Please answer these questions.	Answer here.
How will you heat Machines, by steam, gas, or lamps?	*Steam*
How will you heat Waxers, by steam, gas, or lamps?	*Steam*

How shall we ship, by freight or express? *Freight*
What kind of goods do you make? *Mens fine shoes*

No title to the above mentioned machinery is acquired other than is given in the lease aforesaid.

A competent man is to be sent to set up said machinery at the expense of the said Company.

Freight and transportation charges on said machinery from Boston, Mass., shall be paid by the lessee.

Applicant sign here. FLORSHEIM & COMPANY
1/4/13 per Louis Florsheim, Sec

We accept the above proposition, and promise to deliver the lease and machinery as specified therein.

[Stamped: Jun 29 1899]

Ans July 6/99

Chicago, June 27, 1899.

Goodyear Shoe Machinery Co. Boston, Mass.

Gentlemen: — We have had more or less correspondence with you regarding a royalty on your Company's machines. We have also had considerable difficulty in finding operators for these machines. If you will refer to previous correspondence, you will note that we have special arrangements with the Eppler Machinery Co., which entitle us to certain priviledges. Now we make this proposition, in order to adjust the matter; if you will agree to trade us Goodyear machines for the Eppler, that we now have, we will agree to sign all contracts, and also to pay you 4 cents per pair royalty. When your Mr. Lewis was here we spoke about the

matter to him, and he said he would advise us when he returned home.

We shall await your reply. Yours truly,

FLORSHEIM & COMPANY.

DEFENDANTS' EXHIBIT 40.

[Put in Evidence, page 1040.]

GOODYEAR WELT AND TURN SHOE MACHINE
AND
GOODYEAR OUTSOLE RAPID LOCKSTITCH MACHINE.

There is nothing in the leases of these machiness which requires the lessee to take from the Company any other machine or machines for any purpose whatsoever other than the welt sewing and outsole stitching of welt shoes and and the sole sewing of turn shoes, or which precludes the lessee from obtaining from any other source whatsoever any and all other machines which he may require for any and all operations whatsoever other than the welt sewing and outsole stitching of welt shoes and the sole sewing of turn shoes, or which precludes the lessee from using such other machines so obtained in conjunction with the leased Welt and Turn Sewing and Outsole Stitching Machines.

GOODYEAR AUXILIARY MACHINES.

There is nothing in any of the Company's leases which requires a lessee of any one or more of the Company's machines whatsoever to obtain from the Company any one or more of these Auxiliary Machines or which precludes a lessee of any one or more of the Company's machines from obtaining corresponding auxiliary machines from others or from using such machines so obtained in conjunction with any or all of the Company's machines, including the Company's Welting, Turn Sewing and Outsole Stitching Machines.

When obtained from the Company these machines are not in any way bound to or limited to use with Pulling Over, Lasting, Metallic, Heeling, General Department, or any other machinery obtained from the Company, excepting alone that they are limited to use on "Goodyear Welts and Turns" and in conjunction with the Good-

year Welt and Turn Shoe Machine and the Goodyear Stitcher, the two principal machines of the Goodyear System which together with the auxiliary machines form the system.

There is nothing in the leases of these auxiliary machines which requires the lessee to take from the Company or which precludes the lessee from obtaining from any other source whatsoever any and all auxiliary and other machines which he may require for any and all operations other than the welt sewing and outsole stitching of welt shoes and the sole sewing of turn shoes, or which precludes the lessee from using such other machines so obtained in conjunction with the leased Goodyear System Machines.

Rex Pulling Over Machine.

Rex Pulling Over Machines may be obtained from the Company on an Initial Payment form of lease under which the machines are not in any way bound to or limited to use with Pulling Over Auxiliary Machines, Welting, Stitching, Lasting, Metallic, Heeling, General Department or any other machinery obtained from the Company for any other operation upon the shoe; and there is nothing in this form of lease for these machines which requires the lessee to take from the Company, or which precludes the lessee from obtaining from any other source whatsoever any and all other kinds of machines which he may require for any and all operations whatsoever other than Pulling-over or from using such other machines so obtained in conjunction with the leased Pulling Over Machines held under this form of lease.

Rex Pulling Over System. — Auxiliary Machines.

If a lessee of the Company's Rex Pulling Over Machines under the above form of lease desires to obtain from the Company for use in conjunction with them one or more of the Auxiliary Machines of the Pulling Over System of the Company (which under this form of lease for the Pulling Over Machine he is under no obligation whatever to do) any or all of these Auxiliary Machines may be obtained by him on an Initial Payment form of lease under which the machines are not in any way bound to or limited to use with any other Pulling Over Auxiliary Machines, Welting, Stitching,

Lasting, Metallic, Heeling, General Department, or any other machinery, obtained from the Company for any other operation upon the shoe, excepting alone that such Pulling Over Auxiliary Machines leased on this form of lease are limited to use on shoes pulled over by the Rex Pulling Over Machine or machines held under lease from the Company under the above form of Initial Payment lease.

There is nothing in the above forms of lease for either the Pulling Over Machines or the Pulling Over Auxiliary Machines which requires the lessee to take from the Company or which precludes the lessee from obtaining from any other source whatsoever any and all Auxiliary and other machines which he may require for any and all operations other than Pulling Over, or which precludes the lessee from using such other machines so obtained in conjunction with the leased Pulling Over System Machines of the Company.

The royalty for Pulling Over System Machines held under the above form of lease is 1 cent (subject to 50% discount) for each pair of shoes operated upon by the Pulling Over Machines.

There is no additional royalty for the Auxiliary Machines.

CONSOLIDATED HAND METHOD LASTING MACHINE. — U. S. M. Co. LASTING MACHINE, No. 5.

Either or both of these machines may be obtained from the Company on an Initial Payment Lease under which the machines are not in any way bound to or limited to use with Welting, Stitching, Pulling Over, Metallic, Heeling, General Department, or any other machinery obtained from the Company for any purpose other than lasting, and there is nothing in this form of lease of these machines which requires the lessee to take from the Company any other machine or machines for any other purpose whatsoever or which precludes the lessee from obtaining from any other source whatsoever any and all other machines which he may require for any and all other operations, or from using such other machines so obtained in conjunction with the Company's lasting machines.

METALLIC MACHINES.

Any or all of these machines may be obtained from the Company on an initial payment lease under which the machines are not in

any way bound to or limited to use with Welting, Stitching, Pulling Over, Lasting, Heeling, General Department, or any other machinery obtained from the Company excepting Metallic machinery.

There is nothing in this form of lease for these machines which requires the lessee to take from the Company or which precludes the lessee from obtaining from any other source whatsoever any and all machines other than Metallic which he may require for any and all other operations or from using such other machines so obtained in conjunction with the Company's Metallic Machines.

HEELING MACHINES.

Any or all of these machines may be obtained from the Company on an Initial Payment Lease under which the machines are not in any way bound to or limited to use with Welting, Stitching, Pulling Over, Lasting, Metallic, General Department, or any other machinery obtained from the Company for any other operation upon the shoe, excepting alone those operations performed by the machines of the Heeling Department.

There is nothing in this form of lease for these machines which requires the lessee to take from the Company or which precludes the lessee from obtaining from any other source whatsoever any and all other machines which he may require for any and all operations whatsoever, other than the operations of the machines of the Heeling Department, or from using such other machines so obtained in conjuction with the Company's Heeling Machines.

CLICKING MACHINES.

There is nothing in any of the Company's leases for other machines which requires a lessee of any one or more of the other machines of the Company to obtain Clicking Machines from the Company, or which prevents a lessee of any one or more of the other machines of the Company from obtaining Clicking Machines from others or from using them in conjunction with any of the Company's other machines.

When obtained from the Company these machines are not bound to or limited to use with Welting, Stitching, Pulling Over, Lasting,

Metallic, Heeling, General Department, or any other machinery obtained from the Company, and there is nothing in the lease covering them which requires the lessee to take from the Company any other machine or machines for any other purpose whatsoever, or which precludes the lessee from obtaining from any other source whatsoever any and all other machines which he may require for any and all other operations or from using such other machines so obtained in conjunction with the Clicking Machines obtained from the Company.

GENERAL DEPARTMENT MACHINERY.

There is nothing in any of the Company's leases which requires a lessee of any one or more of the Company's machines whatsoever to obtain any of these machines from the Company, either by purchase or lease, or which requires a lessee having one or more of these machines to take others, or which prevents a lessee of any one or more of the machines of the Company from obtaining machines corresponding to these from others or from using such machines so obtained in conjunction with any of the Company's machines.

These machines are offered on outright sale to anyone desiring to use them.

The terms upon which they are put out on lease are available to those only who are users only of certain of the principal royalty machines of the Company and when leased they are limited to use with such principal royalty machines.

THE EXCELSIOR SHOE COMPANY
Manufacturers of Men's, Boys Youths and Little Gents Fine Shoes.

Branch Offices, Berlin, Germany, New York, Philadelphia, Pittsburgh, Cincinnati, Chicago, St. Louis.

Cable Address "Excelsior"

D. C. Davies, Prest. W. G. Williams, Treas.
J. E. Williams, V. Prest. & Gen. Mgr. J. W. Bannon, Jr., Secy.

Portsmouth, Ohio, Feb. 25, 1913.

Colonel King, United Shoe Machinery Co., Boston, Mass.

Dear Sir: — Your Mr. Ross, Jr. of Cincinnati was here, and we spent the most of a day in going over our proposition for the new factory, and he stated the conditions on which the Company would allow us to equip our new factory with any machinery that we desired in same.

We find upon taking the cost of your machines and what royalty we would pay and the rate of interest and depreciation, that even if we could save on the royalty, it would be a question whether there was any profit, and as far as we can figure, there would possibly be about $1,000.00 to our advantage in a year, or perhaps a little over. We do not feel that this is interesting enough as a business proposition, and told your Mr. Ross that we would go

ahead equipping the factory with your machinery, but the writer thinks that this would be an ideal plant, as we believe we are really organizing economically in any line that would show a saving, as we believe in the next rear or two all American shoes will come in severe competition with English and German made shoes, as the tendency at Washington is to take off the tariff.

As this plant is to make only two or three shoes in a Mock Welt, and is particularly adapted to Boys' shoes and nothing but this one style shoe will be made there, and as we expect to equip fully with your machinery, why would it not be in line to take this plant and your Company use it as an experiment towards a new relation of royalty. For instance, if the Excelsior Shoe Co. makes just a certain shoe in style and grade under certain conditions, and does not branch out into all styles and different constructions in this factory, why should we not be entitled to a plan something like the following, — that we should be given a flat rate for the making of shoes under this head and conditions, probably showing a saving of say half a cent a pair over the old basis.

We feel that with some encouragement on this line that the general income of your machinery in that plant will average more than the general plant in running this plain simple line, and everything being done to produce quantity easily so that what machinery was there would even yield more income than machines in the plant, where all styles and the general line of work is done.

We feel that in doing this you would show an interest, as you have always professed in the manufacturer, and would also encourage a line of goods that would always keep the American shoes, even with Free Trade competition, possibly on the fighting line.

There is no fear of a precedent in considering this question, as we do not think there is another plant like it at present in the country, and we could almost assure you that the aggregate of the machinery in this plant even with a reduced flat rate would yield more than the average equipment that you have in another plant running a regular line.

We presented this matter to Mr. Ross, and he thought it was interesting, as I showed him in a way what we expected to do

there, and as you have always stated that the Company wished to do something to show that they were interested in the manufacturer in keeping costs down when they could feel they were safe in doing so, we felt that in presenting this proposition, we have really opened up a way for the Company to co-operate.

Trusting to hear from you at an early date, as we will soon be ready to start, we remain, Yours very truly,

THE EXCELSIOR SHOE CO.

Dict. — JEWGC. Jno. E. Williams, G. M.

DEFENDANTS' EXHIBIT 44.

[Put in Evidence, page 1319.]

Lease No. *227*

Transfer from Lease No.

This Lease and Agreement, made the *30th* day of *September* A. D. 189*8*, by and between the Eppler Welt Machine Company, a corporation existing under the laws of the State of Maine, having a place of business at Boston, Massachusetts, Lessor, the party of the first part, and *R. H. Long Shoe Mfg. Co. doing business at Springfield, Mass.* Lessee, the party of the second part, witnesseth:

Whereas, the Lessor is now the owner of the following Letters Patent of the United States, viz.: —

No. 325,063, dated Aug. 25, 1885;
No. 387,059, dated July 31, 1888;
No. 487,011, dated Nov. 29, 1892;
No. 409,281, dated Aug. 20, 1889;
No. 507,873, dated Oct. 31, 1893.
No. 387,058, dated July 31, 1888;
No. 447,872, dated March 10, 1891;
No. 487,214, dated Nov. 29, 1892;
No. 498,017, dated May 23, 1893.

And whereas the Lessee desires to use the hereinafter described machines belonging to the Lessor;

Now, therefore, the Lessor, in consideration of one dollar to it paid by the said Lessee, the receipt whereof is hereby acknowledged, and of the stipulations and conditions hereinafter contained on the part of the Lessee to be kept and performed, doth lease unto the said party of the second part the machines designated by their numbers in the following schedule: —

Two Eppler Inseam Sewing Machine , Nos. *77, 151*

Three Eppler Outsole Lock Stitch Machine , Nos. *72, 145, 156*

One Eppler Insole Channeler , No. *103*

Eppler Outsole Channeler , No.

One Eppler Welt Groover and Beveler , No. *103*

One Eppler Welt Splitter , No. *88*

One Eppler Welt Beater , No. *89*

Eppler Channel Lip Turner , No.

Eppler Shank Skiver , No.

One Eppler Bobbin Winder , No. *87*

It is understood that said machines are and shall remain the property of said Eppler Welt Machine Company, and subject to the conditions of this lease and agreement.

And the Lessor doth hereby license the Lessee, and operatives in his employment, to use said machines, upon the terms and conditions hereinafter set forth; provided, however, and this lease is made and this license is granted on the express condition, that the Lessee shall faithfully keep and perform all the conditions and stipulations herein contained on his part to be kept and performed; and upon breach of the same or of any of them by the Lessee, the Lessor, its successors or assigns, may, at their option, cancel and terminate this lease and license; and upon written notice thereof by the Lessor, its successors or assigns, to the Lessee, or to any one in the possession or apparent control of the said machines, or any of them, this lease and license shall terminate, and possession of said machines shall thereupon be transferred to said Lessor, its successors or assigns. And the said party of the second part hereby agrees to keep and perform all the following conditions of this lease and license:—

First. The Lessee is by this lease and license authorized to use the machines hereby leased only in said *Springfield, Mass.* he shall not add to nor subtract from the said machines any mechanism whatever now or hereafter organized or connected therewith by the Lessor, nor make, nor allow to be made, any change or alteration in the same, without the consent thereto in writing by the Lessor, nor interfere with the proper operation of the machines, or any

mechanism forming a part thereof, or attached thereto, nor remove nor deface any dates, numbers, or inscriptions now or hereafter impressed thereon or affixed thereto by the Lessor.

Second. It shall be lawful for the Lessor, or its duly authorized agent, at all reasonable times to have convenient access to the machines, to examine and inspect the same and the use thereof, and to verify the operator's reports, and to improve the machines, and to affix indicators thereto, as it may see fit; and the covenants, stipulations, and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, to indicators now or hereafter affixed thereto, and to all patents hereafter embodied therein, with the same effect as if said patents were included in the list herein set forth.

Third. The following is the schedule of rents or royalties hereinafter referred to, and which it is understood and agreed is to be paid on each pair of shoes or boots respectively made by the aid of these machines or any of them, or by the use of the said patents or any of them, viz.: —

SCHEDULE OF RENTS AND ROYALTIES.

Children's	3 cents.
Misses'	4 "
Women's	6 "
Youth's	4 "
Boys'	6 "
Men's	8 "

Fourth. The Lessee hereby agrees to keep an account of all boots and shoes sewed by him, or by any other person for him or for others, by the aid of the machines hereby leased, or by the use of the patents aforesaid and to render an account thereof to the Lessor, its successors or assigns, on or before the tenth day of each month; which account shall specify the number of pairs of boots and shoes, made under this lease and license during the calendar month next preceding, and the class to which they belong according to the above schedule; and the said Lessee agrees that he will require the operator or operators on said machines to keep a daily

account of all boots and shoes sewed on said machines, upon the printed forms to be furnished by the Lessor, in duplicate; one copy of which, containing such reports for the calendar month preceding, the Lessee agrees to send, on or before the tenth day of each month, to the Lessor; and whenever required by the Lessor, its successors or assigns, to make oath to the correctness of said returns; and to allow the Lessor, its successors, assigns, or authorized agents to examine the original books and accounts of the Lessee, in order to verify the returns aforesaid, and the Lessee agrees to send to the Lessor, on or before the tenth day of each month, in case the machines, or any of them, hereby leased have not been run during the month next preceding, one of the aforesaid printed forms furnished by the Lessor, for each such machine, signed by the Lessee, and marked across the face with the words "not running" or "not in use."

Fifth. The Lessee agrees to pay unto the Lessor, as rent for the machines hereby leased, the rent or royalty specified in the schedule forming part of Section Third herein, on each pair of boots or shoes of the respective kinds mentioned or described in said schedule made by the aid of the said machines or of any of them, or by the use of the said patents or any of them; the rents and royalties for all such boots and shoes made as aforesaid during one calendar month, to be due on the first day of the calendar month next following, and to be paid within three months from that day; but the Lessor hereby agrees that **if the rents and royalties due on the first day of any month shall be paid on or before the fifteenth day of that month, it will, in consideration thereof, grant a discount of fifty** and twenty-five **per cent. from the rents and royalties specified in the schedule aforesaid; and the Lessee further agrees to pay, while he shall retain possession of the machines hereby leased, all taxes thereon, to whomsoever laid or assessed.** The Lessee hereby further agrees that the rents or royalties actually paid by the Lessee for each sewing or stitching machine herein leased shall, in each and every year, during the continuance of this lease, amount in the aggregate to at least one hundred dollars. The

Lessee shall also pay the expense of transportation of the machines herein leased from and to the Lessor's premises, and also the expense of keeping said machines in repair; and shall keep said machines and all of them fully insured in the amounts hereinafter mentioned against loss by fire, and in case of loss or damage to said machines or any of them shall pay to the Lessor or its order upon demand the full amount of such insurance. The insurance upon said machines shall be in the following amounts, to wit: —

Eppler Inseam Sewing Machine	$250.00
Eppler Outsole Lock Stitch	190.00
Eppler Insole Channeler	50.00
Eppler Outsole Channeler	50.00
Eppler Welt Groover and Beveler	15.00
Eppler Welt Splitter	10.00
Eppler Welt Beater	25.00
Eppler Channel Lip Turner	25.00
Eppler Shank Skiver	35.00
Eppler Bobbin Winder	25.00

Sixth. The Lessee hereby agrees that he will not in any way violate, or infringe, or contest the validity of any of the patents he is hereby licensed to use, or the sufficiency of their specifications, or the validity of the title of the Lessor, or of its successors or assigns, to said patents or any of them.

Seventh. This lease and license is not assignable by the Lessee, by his own act or by operation of law.

Eighth. The following are also agreed to by the parties to this instrument as the terms of lease and license of the machines which the Lessee is hereby licensed to use: —

1st. That the power conveyed by this lease and license is only the right to use the said machines, and not the right to make or sell any machine embodying the patents aforesaid, or any of them; and that a transfer or removal of the machines hereby leased, or any of them, can only be made with the consent of the Lessor, its successors or assigns; and that if the Lessee is, or becomes at any time, insolvent or bankrupt, or makes an assignment for the benefit of creditors, or if a sale, lease, transfer, or removal of said ma-

chines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Lessee, without the written consent of the Lessor, or its successors or assigns, this lease and license shall thereupon terminate and expire; and the Lessor, its successors or assigns, may take possession of said machines without the Lessee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for rent or license under this instrument.

2d. The Lessee agrees that the machines hereby leased shall be used only in the manufacture of boots and shoes known in the trade as "Eppler Welts," and that he will not use or permit the use of said machines, or either or any of them, upon boots or shoes in the manufacture of which any sole or welt sewing machine not leased to him by the Lessor is employed, or for any other purpose, unless the consent in writing of the Lessor shall first have been obtained.

3d. That in case the Lessee refuses or neglects to perform, or violates any of the terms or conditions of this lease and license, the Lessor, its successors or assigns, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon be transferred to the Lessor, its successors or assigns, free and discharged of this lease and license; and the Lessor, its successors or assigns, or its authorized agent or agents, may thereupon enter the premises where said machines may be, and may take and remove the same without being deemed guilty of any trespass; and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease or license.

4th. That this lease and license shall continue (provided the Lessee complies with the terms and conditions thereof) until the expiration of all the Letters Patent which the Lessee is hereunder licensed to use, or any extensions or renewals of the same, or addi-

tional patents; and upon the expiration thereof, the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased, in good order; natural wear and tear alone excepted.

Ninth. In case any other machines than these hereby leased and licensed, embracing any of the inventions patented in the aforesaid Letters Patent, or any of them, or any inventions or improvements for which Letters Patent shall be granted or assigned to the Lessor, shall hereafter come into possession of the Lessee, by exchange or otherwise, without lease or license from the Lessor, its successors or assigns, then in case the Lessor, its successors or assigns, shall so elect, all the covenants herein contained shall apply to such machines, inventions or improvements; and shall govern the parties respectively to the same extent as if the said machines, inventions or improvements had been expressly included in this lease and license. The Lessor shall give written notice of its election as aforesaid within thirty days after it shall have received written notice from the Lessee of the possession of such machines; but may give such notice without having received notice from the Lessee of the possession of such machines.

Tenth. The Lessee agrees that he will not disturb or interfere with, nor permit any one else to disturb or interfere with, any indicator which now is, or which may be hereafter, placed upon the machines as aforesaid.

Eleventh. All the rights and interests which under this instrument and by reason of the ownership of said machines and patents and patent rights belonging to the Lessor shall be deemed to belong to, and may be enforced in, the names of the Lessor and its successors and assigns, and all the stipulations binding on the Lessee shall be binding on his executors or administrators.

Twelfth. It is agreed that the numbers of the machines named in this lease may be entered herein by the Lessor after signing; and in case the Lessee shall require more than one machine, it is agreed that the termination to words relating to the machines shall be construed and considered as written in the single or plural, as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party

of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular, as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained.

In Witness whereof, the parties aforesaid have hereunto put their hands and seals: the said parties of the second part binding themselves to all the foregoing agreements, both jointly and severally.

Lasting Machine Department.

Lease and License Number *142*.

Chase Lasting Machine.

This Lease and Agreement made at Boston in the State of Massachusetts this *sixteenth* day of *January* 190*4* between the United Shoe Machinery Company, a corporation organized under the laws of the State of New Jersey having an office in said Boston, hereinafter referred to as the lessor, of the one part, and *R. H. Long Shoe Manufacturing Company, South Framingham*, in the State of *Massachusetts*, hereinafter referred to as the lessee, of the other part:

Witnesseth, that the lessor, in consideration of the covenants and agreements on the part of the lessee herein contained, does hereby lease to and license the lessee under its patents to use the

machine or machines of the Lasting Machine Department of the lessor now or hereafter delivered to the lessee, and designated by number as follows, viz. : —

Chase Lasting Machine No. *42*, *275*, *561*, *572*, *1223*, *1259*.

Chase Hand Tacker (Stop Motion) No. *955*, *1557*, *1640*, *1652*, *1662*, *2306*,

and any duplicate parts, extras, mechanisms and devices relating thereto, or used in connection therewith, now attached to or delivered with the said designated machine or machines or which may at any time hereafter be obtained from the lessor, or be added thereto with the consent of the lessor (the whole of which machine or machines, duplicate parts, extras, mechanisms and devices, held by the lessee under these presents, whether now or hereafter delivered to or in the possession of the lessee, is hereinafter referred to as the "leased machinery"), subject to the conditions hereinafter contained.

And that the following are agreed to as conditions of the lease and license of the leased machinery, all of which the lessee covenants and agrees to keep and perform : —

One. The leased machinery shall at all times remain and be the sole and exclusive property of the lessor, and the lessee shall have no right of property therein, but only the right to use the same, upon the conditions herein contained. The leased machinery shall be used only by the lessee himself or by operatives in his direct employ, and only in the factory now occupied by him at *South Framingham* in the State of *Massachusetts*. The leased machinery shall not be transferred or delivered or sublet to any other person or corporation, and neither the lease nor the license hereby granted can be assigned by the lessee by his own act or by operation of law. If the lessee becomes insolvent or bankrupt, or has a receiving order made against him, or makes or executes any bill of sale, deed of trust or assignment for the benefit of his creditors, or if a sale or lease or removal of the leased machinery, or any part thereof, without the consent in writing of the lessor, be made or attempted, or if any distress or execution or attachment be levied thereon, then and in each such case this lease and license and any

other lease or license then existing between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, shall at the option of the lessor cease and determine, and the possession of and full right to and control of all the leased machinery, and any machinery held by the lessee under any other lease or license from the lessor, whether as the result of assignment to the lessor or otherwise, shall thereupon revest in the lessor free from all claims or demands whatsoever. The lessor and its agents and employees shall at all times be given access to the leased machinery for the purpose of inspecting it or watching its use and operation, or of altering, repairing, improving, or adding to it, or determining the nature or extent of its use, and the lessee shall afford all reasonable facilities therefor.

Two. The lessee shall at all times and at his own expense keep the leased machinery in good and efficient working order and condition, and shall not permit any one to injure or deface or remove any plate, or dates, numbers, or other inscriptions now or hereafter impressed on or affixed to the leased machinery by the lessor. The lessee shall obtain from the lessor exclusively, and shall pay therefor at the regular prices from time to time established by the lessor, all the duplicate parts, extras, mechanisms and devices of every kind needed or used in operating, repairing, or renewing the leased machinery, and the same shall form part of the leased machinery, and the lessee shall not otherwise make or allow to be made any addition, subtraction, or alteration to, from, or in the leased machinery without the consent in writing of the lessor, nor interfere with the proper operation of the same. The lessee shall also purchase from the lessor exclusively at the prices from time to time established by the lessor all supplies, including string nail, tack strips, and other fastening material used in connection with the leased machinery.

Three. The lessee shall at his own expense insure the leased machinery against loss by fire, and keep the same insured to the amount of Two Hundred (200) Dollars for each Chase Lasting Machine hereby leased, and in case the same is lost or destroyed by fire, or otherwise before the expiration or termination of this

lease, then the lessee shall pay to the lessor upon demand the sum of Two Hundred (200) Dollars for each Chase Lasting Machine and accessories as partial compensation for such loss or destruction. The lessee shall pay all taxes and assessments which shall be levied in respect to the leased machinery or in respect to this lease and license, or the right to payments hereunder upon whomsoever assessed.

Four. The lessee shall use the leased machinery to its full capacity on all boots, shoes, and other footwear made in his factory in the manufacture of which it can be used, but the leased machinery shall not nor shall any part thereof be used in the manufacture of any boots, shoes, or other footwear which are or shall be welted or the soles stitched on welt sewing or sole stitching machines not leased to the lessee by the lessor or its assignor or in the manufacture of any turn boots, shoes, or other footwear, the soles of which are or shall be attached to their uppers by turn sewing machines not leased to the lessee by the lessor or its assignor, or in the manufacture of any boots, shoes, or other footwear which have been or shall be slugged, heel seat nailed, or otherwise partly made by the aid of any "metallic" machinery not leased to the lessee by the lessor or its assignors.

Five. The lessee shall pay to the lessor on the last day of each calendar month as rent or royalty the sum of one and one half (1½) cents for each pair of long-legged boots and of one (1) cent for each pair of all other kinds of boots, shoes, or other footwear, or portions thereof, lasted or manufactured or prepared during the next preceding calendar month in any way, whether wholly or in part, by the aid of the leased machinery or any part thereof; **provided, however, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the rent or royalty due for the use of the leased machinery for the next preceding calendar month, the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from such rent or royalty due for such preceding calendar month.** The lessee guarantees that for each Chase Lasting Machine hereby leased the rent or royalty herein provided (less all abatements)

shall amount in each calendar year, ending December 31, to at least (10) dollars for each calendar month and at the end of each such calendar year the lessee shall pay to the lessor the amount, if any, by which the rent or royalty paid for said year is less than such guaranteed rent or royalty; provided, however, that if in any calendar year the factory of the lessee remains wholly idle for any entire calendar month, then the amount of rent or royalty guaranteed for that year shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle.

Six. The lessor may attach to the leased machinery, or any thereof, an indicator or indicators to register the number of revolutions or movements of any part or parts thereof, and the lessee shall not allow any person (other than the lessor or its agents) to disturb or interfere with such indicator or indicators. In case any indicator thus attached shall from any cause cease to correctly indicate or register, or shall be disturbed or out of repair, or if the glass covering any such indicator shall be removed or broken or injured, then, and as often as the same shall happen, the lessee shall immediately, by writing, notify the lessor, and at the same time explain the circumstances under which the same has happened. In case any such indicator ceases to indicate, or becomes or remains inaccurate, or the glass covering becomes or remains removed, broken, or injured, because of any fault of the lessee or any one in his employ, or because of the failure of the lessee to give promptly the notice hereinbefore provided for, then, without prejudice to any other rights of the lessor hereunder, the lessee shall pay the lessor as rent or royalty, without the right to any discount, one and one-half (1½) cents per pair for each pair of boots, shoes, or other footwear, or portions thereof, in the manufacture of which the leased machinery or any part thereof shall have been used. The lessee shall keep full and accurate accounts, independently of any indicators that may be placed upon the leased machinery, showing the number of each kind of boots, shoes, and other footwear, or portions thereof, in the manufacture of which the leased machinery or any part thereof shall have been used, and shall allow the lessor at all times, by its agents or attorneys, to examine and

to take copies of such accounts and entries of the lessee as may serve to determine the total number of boots, shoes, or other footwear or portions thereof made by the aid of the leased machinery or any part thereof, and the lessee shall produce all such accounts and entries upon request. The lessee shall require each of his operators upon the leased machinery or any part thereof to keep upon blanks or blank books to be furnished by the lessor accurate daily records of the number of each kind of boots, shoes, and other footwear, or portions thereof, in the making of which he has used the leased machinery or any part thereof, and shall require his operators to sign such records, and, if requested so to do by the lessor, shall verify the same under oath. The lessee shall send to the office of the lessor in Boston, on or before the fifth day of each calendar month the original records for the next preceding calendar month kept by his operators as above provided for; and in case, in any calendar month, none of the leased machinery has been used, the lessee shall notify the lessor in writing of that fact, on or before the fifth day of the next succeeding calendar month. The lessee shall also furnish any further information which may be called for in relation to the leased machinery or the use thereof.

And that the following agreements, stipulations, and provisions are agreed to:—

Seven. If at any time the lessee shall fail or cease to use exclusively lasting machinery held by him under lease from the lessor for lasting all boots, shoes, and other footwear made by or for him, which are lasted by the aid of machinery, or shall fail or cease to use exclusively tacking mechanisms and appliances held by him under lease from the lessor, for doing all work in the manufacture of all boots, shoes, and other footwear made by or for him which is done by the aid of tacking mechanisms and appliances, the lessor, although it may have waived or ignored prior instances of such failure or cessation, may at its option terminate forthwith by notice in writing this lease and license and any other lease or license of lasting machines, lasting machinery, lasting mechanisms, or lasting devices then existing between the lessor and the lessee, whether as the result of assignment to the lessor or

otherwise; and the possession of and full right to and control of all the leased machinery and all lasting machines, lasting machinery, lasting mechanisms, and lasting devices held by the lessee under lease or license from the lessor or its assignors shall thereupon revest in the lessor free from all claims and demands whatsoever.

Eight. This lease and license shall continue, unless sooner terminated by the lessor because of breach thereof on the part of the lessee, or otherwise as herein provided, for seventeen years from the date hereof. But if any breach or default shall be made in the observance of any one or more of the conditions herein contained or contained in any other lease or license agreement subsisting between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and expressed to be obligatory upon the lessee, the lessor shall have the right, by notice in writing to the lessee, to terminate forthwith this lease and license, and also if the lessor so elects any other lease or license agreements then in force between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and this notwithstanding that previous breaches or defaults may have been unnoticed, waived, or condoned by or on behalf of the lessor. If, upon the expiration of the full term of this lease, the lessor does not request the return of the leased machinery, then the leased machinery shall continue to be held and used under and in accordance with the conditions of this lease and license, which shall thereupon be extended indefinitely as to term; but thereafter either the lessee or the lessor, upon sixty days' notice in writing to the other, may terminate this lease and license, whereupon the leased machinery shall be delivered forthwith to the lessor, as herein provided. Upon the expiration or termination of this lease and license or any extension thereof by notice or by reason of any default on the part of the lessee as to the terms of this lease and license or any other lease or license from the lessor, or otherwise as herein provided, the lessee shall forthwith deliver the leased machinery to the lessor at its office or factory in good order, reasonable wear and tear alone excepted; and shall thereupon pay to the lessor the sum of

One Hundred (100) Dollars for each Chase Lasting Machine and its accessories as compensation for setting up the leased machinery in his factory, for instructing operators, and for deterioration of the leased machinery, and the lessee, for himself, his heirs, executors and administrators, hereby grants to the lessor, its successors and assigns, full right, power, and authority to enter upon the premises and into any factory, room, or any place where the leased machinery or any part thereof may be, and take possession thereof, and take away the same; and the lessee shall have no claim for the repayment of any sum or sums, or any part thereof, which he shall have paid as consideration for the grant of this lease and license or for rent or royalty, or otherwise in respect to the leased machinery. The lessee shall also without prejudice to any other rights and remedies of the lessor hereunder pay to the lessor such sum as may be necessary to put the leased machinery in suitable order and condition to lease to another lessee as well as pay the freight expense of returning the same.

Nine. A notice in writing, signed by the president, a vice-president, or the treasurer of the lessor, or by any assignee of the lessor's rights hereunder, and posted by prepaid letter, addressed to the lessee or delivered at his usual or last known place of abode or business, that the lease and license hereby granted is determined or shall be determined at the expiration of a certain period, shall be a sufficient determination of the lease and license from the time of posting or delivering such notice, or from the expiration of the period therein mentioned, as the case may be. Any termination of this lease and license shall not release the lessee from his obligation to pay rent or royalty for the period prior to such termination, and shall be without prejudice to any other rights or remedies which the lessor may have for violation of contract, use of machines without right, or use of patented inventions without license.

Ten. The lessee admits the validity of each and every of the Letters Patent of the United States of America, owned by the lessor or under which it is licensed, any of the inventions of which are or hereafter may be embodied in the leased machinery. The lessee also agrees that he will not directly or indirectly infringe or

contest the validity of, or the title of the lessor to, any of the patents referred to in the "Schedule of Patents" hereto annexed. The termination or cesser of this lease and license from any cause whatever shall not in any way affect the provisions of this clause, or release or discharge the lessee from the admission and estoppel herein set forth.

Eleven. None of the terms or conditions of this lease and license shall be held to have been waived by any act or knowledge of the lessor, its agents or employees, but only by an instrument in writing, signed by the president, a vice-president, or the treasurer of the lessor.

Twelve. The term "lessor" shall include the said United Shoe Company and its successors and assigns. All the conditions and agreements binding on the lessee shall be binding on and enforceable against his legal representatives. In the construction of this instrument, words relating to the number and gender of the parties shall be read according to their real number and gender.

In witness whereof, the parties hereto have duly executed this instrument in duplicate, the day and year first above written.

South Framingham, Mass., Aug 7 1903

United Shoe Machinery Co. Boston Mass.

Gentlemen Your favors of 1st and 6th at hand. Mr. John E. Long has charge of all the work in the factory and he has no desire to use the Chase machines on work that can be done well on the Consolidated. The price for lasting is less on the Consolidated than on the Chase and Mr. John E. Long and the writer are trying at all times to keep down cost of labor and will use the Consolidated machines so far as possible.

I believe we have six machines (Consolidated) four of them set up and have been running until yesterday one operator left, and we have a man to take his place tomorrow or Monday. I think the operators are satisfied and have been earning good pay. I think we will be able to run all the Consolidated machines we have to their full capacity as well as some of our Chase machines and reports that have come to you saying we did not wish to use the Consolidated machines are not true. We are now advertising for cutters and stitchers and when we get under way on the fall trade we expect to start the other two machines, which would have been running now if we had enough help in cutting and stitching room.

Yours truly,

R. H. Long.

The Consolidated operators have been earning about 3.00 for 9 hours work.

License and Rental Lease No.

Transfer from License No.

This License and Rental Lease Agreement, made in duplicate the *twelfth* day of *January* A. D. 1*900*, by and between the Consolidated & McKay Lasting Machine Company (Chase Department), a corporation incorporated under the laws of the State of Maine, Licensor and party of the first part, and *R. H. Long Shoe Mfg. Co.* of *Springfield*, *Mass.*, Licensee and party of the second part. Witnesseth:

Whereas, the Licensor is now the owner of the following Letters Patent of the United States relating to Lasting Machines or auxiliary machines for lasting, to wit: No. 319,784, dated June 9, 1885; No. 337,662, dated March 9, 1886; No. 337,924, dated March 16, 1886; No. 337,925, dated March 16, 1886; No. 338,930, dated March 30, 1886; No. 340,860, dated April 27, 1886; No. 356,619, dated January 25, 1887; No. 356,620, dated January 25, 1887; No. 363,283, dated May 17, 1887; No. 364,088, dated May 31, 1887; No. 376,368, dated January 10, 1888; No. 391,688, dated October 23, 1888; No. 477,788, dated June 28, 1892; No. 477,789, dated June 28, 1892; No. 478,501, dated July 5, 1892; No. 483,375, dated September 27, 1892; No. 545,052, dated August 27, 1895; No. 558,011, dated April 7, 1896; No. 561,189, dated June 2, 1896; No. 566,831, dated September 1, 1896; No. 571,404, dated November 17, 1896; No. 569,590, dated October 13, 1896; No. 569,182, dated October 13, 1896; No. 569,231, dated October 13, 1896; No. 571,339, dated November 17, 1896; No. 571,429, dated November 17, 1896; No. 571,509, dated November 17, 1896; and other patents applied for and now pending, and is, moreover, the owner of other patents not herein enumerated;

And, whereas, the Licensee desires to use the hereinafter described machines belonging to the Licensor: —

Now, Therefore, the Licensor, in consideration of one dollar to

it paid by the Licensee, the receipt whereof is hereby acknowledged, and of the stipulations and conditions hereinafter contained on the part of the Licensee to be kept and performed, doth loan unto the Licensee the machines designated by their numbers in the following schedule, the said machines embodying some of the foregoing named patents: —

1 Lasting Machine (Chase) No. *1140*.

2 Hand Tackers (Chase Stop Motion) Nos. *323*, *1537*.

And the Licensor does hereby license the Licensee, and operatives in his employment, to use said specified loaned or rented machines upon the terms and conditions herein set forth; Provided, however, and this loan is made and this license is granted on the expressed Condition, that the Licensee shall faithfully keep and perform all the conditions and stipulations herein contained on his part to be kept and performed, and upon breach of the same, or either of them by the Licensee, the Licensor may, at its option, cancel and terminate this loan and license, and upon written notice thereof by the Licensor to the Licensee, or to any one in the possession or apparent control of the machines, this loan and license shall terminate, and possession of said machines shall thereupon revest in the Licensor. It is also agreed that the Licensor may, at its option, upon breach of any condition herein contained, take possession of said machines, or any of them, without termination of this agreement.

And the following are also agreed to as terms and conditions of the loan and license of the machines which the Licensee is hereby licensed to use, all of which, together with those hereinbefore expressed, the Licensee hereby agrees to keep and perform: —

First. — The Licensee is by this loan and license authorized to use the machines hereby loaned, only by himself or operatives in his direct employ, and only in *Springfield*, *Mass.*

He shall not add to nor subtract from the machines any mechanism whatever now or hereafter organized or connected therewith by the Licensor, nor make nor allow to be made any change or alteration in the same, without the consent thereto in writing of the Licensor, nor interfere with the proper operation of the ma-

858

chines, nor any mechanism forming a part thereof, or attached thereto, nor remove nor deface any dates, numbers or inscriptions, now or hereafter impressed thereon or affixed thereto by the Licensor, and shall at all times, at his own expense, keep and maintain the machines in as good and efficient working order as the same now are or may hereafter be put by the Licensor. All risks and expense of transportation to and from the Licensee's factory shall be assumed by the Licensee. Inasmuch as the machines are only loaned by the Licensor, and the Licensee pays no purchase price for the machines, the said machines do and shall continue to belong exclusively to and remain wholly the property of, and subject to the control of the Licensor, and the Licensee acquires no right to buy or to retain said machines except by the written consent of the Licensor. The Licensee agrees to keep the Lasting Machines and accessories in first-class order and repair at his own expense. The Licensee also hereby covenants and agrees to keep the Lasting Machines and accessories insured by a policy satisfactory to the Chase Department of the Consolidated & McKay Lasting Machine Company for two hundred dollars each, and to pay all taxes assessed on said machines. In case any Lasting Machines are damaged by fire, directly or indirectly, the Licensee agrees to pay to the Licensor the sum of two hundred dollars for each Lasting Machine, including its accessories, so damaged.

Second. — The Licensor and its agents may, at all reasonable times, have convenient access to the machines to examine and inspect the same and the use thereof, and to repair and improve the same so far as it sees fit; and the covenants, stipulations and conditions herein contained shall apply to all improvements which the Licensor shall hereafter add to the machines and to all patents on said improvements, the right to use which shall be owned by the Licensor, with the same effect as if said patents were included in the list of patents hereinbefore set forth.

Third. — The Licensee agrees to pay unto the Licensor, on the fifteenth (15th) day of each month, as rent or royalty for the previous month for the machines hereby loaned, and for the use of the patents hereby licensed, for each and every pair of shoes or boots

lasted by the aid of said machines or any of them, or by the use of said patents or any of them, or in the making of which any of said patents shall be used, the sum set forth in the classified schedule hereto annexed in the column headed "Royalty Value"; and said royalty is hereby agreed upon by and between the parties hereto as the just, fair, and correct value to the Licensee for rental of the machines and for use of the patents and inventions hereby licensed to the Licensee by the Licensor, and that the "abated rent or royalty" hereinafter named is not the true value of the license hereby granted, but is a concession and abatement of such value for and in consideration of the conditions hereto attached, and this agreement and responsibility, and all others in this license contained shall extend to and in respect of all shoes or boots made or lasted by the aid of said machines or on any machine embracing any of the patents which the Licensee is hereby licensed to use, whether made by the Licensee or by other persons for him; provided, however, that in all cases when the Licensee shall pay to the Licensor, on or before the fifteenth day of each month, the "abated rent or royalty" as hereinafter set forth, per pair for each and every pair of shoes or boots lasted in whole or in part by the use of said machines or patents, or any of them; said payments so duly made shall be full payment and satisfaction of the rent or royalty for the use of said machines and of the license for the use of the patents, for such shoes or boots in respect to which said payments shall have been so duly made, and it is agreed that default of payment of said rent or royalty or of any indebtedness to the Licensor when due, that is, on or before the fifteenth (15th) of each month, shall forfeit the Licensee's right to any abatement of the full rent or royalty, as herein provided. And it is hereby agreed that for each and every pair of shoes and boots made or lasted by the aid of the machines hereby loaned, or made by or for the Licensee by the use of the patents hereby licensed, or any of them, and in respect of which there shall not have been paid the "abated rent or royalty" as hereinbefore set forth, the Licensee shall pay to the Licensor the rental or royalty value named in said classified schedule as liquidated, fixed, and settled damages. It is hereby agreed that

the monthly rent or royalty returns shall be computed at "abated rent or royalty." In addition to these agreements relating to rent or royalty, and to the "abated rent or royalty" and to payments as liquidated damages of the full rental or royalty value, in case of neglect or default of or refusal to make payment when due, it is agreed by the Licensee that in case he becomes insolvent or makes an assignment for the benefit of creditors, or in case his property or business goes into the hands of a receiver, all rent or royalty due to the Licensor shall be at once computed at the full rent or royalty value, as expressed in the schedule of rentals or royalties herewith attached, and the Licensee expressly agrees to this computation of the rental or royalty value, and further agrees not to contest or dispute any claim for the said full rental or royalty value. It is agreed and covenanted by the Licensee that whenever requested, in writing, by the Licensor, he will pay not less than ten dollars per month, as a minimum amount of rental or royalty for the use of each Lasting Machine, except when his factory is not running. But until further notice, given in writing, it is agreed between the parties hereto that if the Licensee pays the rental or royalty on or before the fifteenth (15th) of the month following the month when the lasting was done, and otherwise keeps all the terms of this License, there will be a discount made for such payment sufficient to reduce the cost of "abated rent or royalty" on all classes of shoes to one half cent per pair, excepting on long-legged boots, on which the abatement will be sufficient to reduce the cost to three fourths of a cent a pair, but it is specially agreed that this abatement ceases upon written notice given by the Licensor to the Licensee.

Fourth. — The Licensee agrees that the operator on each machine shall keep a daily account of the number of pairs of shoes and boots lasted by him and the class to which they belong; which account shall be signed by the operator and verified and signed by the Licensee and forwarded by the Licensee to the Licensor on the first day of each month, and rental or royalty shall be paid by the Licensee on the basis of said account. And the Licensee agrees to give the Licensor, its successors, or assigns, or its or their

authorized agent or agents, free access at all times to the premises where the machines hereby loaned are stored or operated, for the purpose of verifying the operators' reports, and in case operators' reports shall not be made as above provided, it shall be the right of the Licensor to appoint a competent man to keep the accounts herein required; and all reasonable compensation for the services and expenses of such man, which shall not exceed three dollars per day, shall be at the charge of the Licensee, and the Licensee hereby agrees to pay the same.

The Licensee agrees that he will allow the Licensor, its successors and assigns, and its and their agents at any time hereafter, to attach an indicator or counter to any machine embracing any of the patents hereby licensed, which now is or which may hereafter come into the possession of the Licensee, for the purpose of indicating the number of shoes or boots made, and to examine, modify, repair, or replace the said indicator, and that he, the Licensee, will not disturb or interfere with, nor permit any anyone else to disturb or interfere with, any indicator which now is or which may be hereafter placed upon any machine as aforesaid.

Fifth. — The Licensee hereby agrees that he will not in any way violate, or infringe, or contest, the validity of any of the patents, or any reissue or extension of the same, which he is hereby licensed to use, or the sufficiency of their specifications, or the validity of the title of the Licensor to said patents, or any of them, and expressly admits the validity and sufficiency thereof.

Sixth. — The machines cannot be transferred, and this loan and license is not assignable by the Licensee, by his own act or by operation of law.

Seventh. — The power conveyed by this license is only the right to use the said specific machines, and not the right to make, sell, or alter any machines embodying the patents aforesaid, or any of them; and a transfer or removal of the machines hereby loaned can only be made with the written consent of the Licensor; and if the Licensee is or becomes at any time insolvent or bankrupt, or if a sale, lease, transfer, alteration, or removal of said machines shall be made or attempted by the Licensee, or by operation of law, or

by any legal officer, representative, or assignee, as the property of the Licensee, without the written consent of the Licensor, the possession of said machines shall thereupon revest in the Licensor, and it may take possession of said machines without the Licensee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this license, or for rental or royalty under this instrument, nor shall he be released thereby from any of the conditions of this agreement.

Eighth. — In case any machine hereby loaned shall remain unused for the period of four consecutive months, the Licensor may, at any time thereafter, while it remains unused, cancel this loan and license so far as relates to said unused machines, by giving written notice, as herein provided, that it has elected so to do, and, upon giving such notice, this loan and license shall be terminated to the extent aforesaid, and the possession of said unused machines shall thereupon revest in said Licensor, but, in case of such cancellation and reclamation, the Licensee shall thereupon pay the Licensor the sum stated in article twelfth for deterioration of the machines by use or otherwise, and other expenses in reference to the same.

Ninth. — In case the Licensee refuses or neglects to perform, or violates any of the conditions of this license, the Licensor shall have the right to terminate this license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this license shall be terminated, or upon taking or demanding possession of the machines without cancellation of this agreement, the possession of said machines shall thereupon revest in the Licensor; and upon the termination of the loan and license by lapse of time, cancellation, breach of condition, or otherwise, it shall be the duty of the Licensee forthwith to deliver the machines hereby loaned and licensed, to the Licensor in good condition, reasonable wear and tear excepted; and upon such termination or taking or demanding possession of the machines by the Licensor, and without prejudice to any other legal rights or remedies for violation of contract, use of machines without right, or use of patents without license, the Licensor or its agents may thereupo

enter the premises where said machines may be, and may take and remove the same, and the Licensee shall have no claim whatever on account of any sum or sums he may have paid under this license as rent or royalty or otherwise, nor shall he be released from his agreements contained herein regarding sum due for return of machines, repairs, instruction of operators, deterioration, etc., as mentioned in article twelfth.

Tenth. — This license shall continue (unless the Licensor shall cancel this license for breach of condition) until the expiration of all the Letters Patent which the Licensee is hereby licensed to use, and which are or may hereafter be embodied in the hereby loaned machines, and the other patents or improvements referred to shall be considered as included in this license the same as if entered in this license by date and number, or any extensions or renewals of the same; and upon the expiration thereof the Licensee shall deliver to the Licensor the machines and accessories hereby loaned in good order, natural wear and tear alone excepted.

Eleventh. — In case any other machines than those now hereby loaned and licensed, embracing any of the patents hereby licensed, shall hereafter be ordered by, or come into the possession of, the Licensee then, in case the Licensor shall so elect, all the covenants herein contained shall apply to such machines, and shall govern the parties respectively to the same extent as if the said machines had been expressly included in this loan and license. The Licensor shall give written notice of its election as aforesaid, and the entry into and under this License Agreement of all machines in possession of the Licensee is hereby specially agreed to by the Licensee, but this shall not take away the Licensor's right to refuse such entry in case of machines transferred without written consent of the Licensor.

Twelfth. — It is declared and understood that it is the intention of the Licensee to use said machines herein licensed for lasting all of the shoes and boots that shall be made by him applicable to the said machines, and not to have them in his possession as a means of reducing the price of hand lasting, or of controlling hand-lasters, or of influencing a trade with the owners of any other Lasting

Machines or of reducing the price thereof, or the prices for labor thereon, and the Licensor enters into this contract because of and by reason of such understanding and intention on the part of the Licensee. It is agreed that the Licensee shall use such machines hereby loaned for lasting all of his shoes and boots, to their full capacity, limited only by the demands of his business; and should the demands of his business require, he shall take and pay for the loan of such additional machines as may be required to do all his work; and in case any Lasting Machine in this agreement is returned to the Licensor, whether voluntarily or because of the Licensee's insolvency or the appointment of a Receiver for his business, or for non-compliance with this agreement, or otherwise, the Licensee or his assigns shall pay the Licensor one hundred (100) dollars as compensation for setting up each machine at his factory, for instructing operators, and other expenses incurred, and he shall also pay, in addition thereto, the cost of putting the machine into good condition and repair, as well as freight expense of returning the same.

Thirteenth. — It is agreed that the Licensee shall buy of the Licensor, and only of it, all the fittings and all the spare parts for repairing the machines hereby licensed, and also all the string-nail, tack-strips, or other fastenings to be driven by any appliance for lasting the shoes or boots, whether lasted in whole or in part by the aid of any of the machines hereby licensed, or by the use of any of the said patents, or in the making of any of which any of said patents shall be used; and that the same shall be sold by the Licensor at the same prices to all Licensees for the time being. The prices and terms for the same to be fixed by the Licensor; and in all cases whenever the machines are returned to the possession of the Licensor all the accessories, which shall include all spare parts and fittings, shall be returned with the machines, free from any claim as to title, and all unused tack-strips remaining in the possession of the Licensee at the time of the return of the machines shall also be returned to the Licensor's possession free from any claim as to title, but credit for such tack-strips shall be given by the Licensor.

Fourteenth. — All the rights and interests which, under this

instrument and by reason of the ownership of said machines and patents and patent rights belonging to the Licensor, shall be deemed to belong to and may be enforced by the Licensor, its representatives, and assigns, and all the stipulations binding on the Licensee shall be binding on his or their representatives or assigns.

Fifteenth. — It is agreed that this instrument may be used for Licensees of the female sex, or for corporations, and in that case the masculine pronoun denoting the Licensee shall, whenever it occurs, be instead of and indicate the feminine, or neuter, as the case may be; and also that when the party of the second part shall consist of more than one person the termination of the words relating to the said party shall be considered as singular or plural, as the sense may require; and that when the party of the second part so consists of several persons, and they sign this License and Lease for Rental, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained, and also that the numbers of the machines named in or covered by this License and Lease may be entered herein by the Licensor after signing; and that as this instrument is designed and intended for continuous use between the parties hereto, in case the Licensee shall have more than one machine, it is agreed that the termination of words relating to the machine shall be considered as written in the singular or plural, as the number of machines entered in this License and Lease Agreement may require.

License and Rental Lease No.

Transfer from License No.

This License and Rental Lease Agreement, made in duplicate the *twenty third* day of *July* A. D. *1900*, by and between the United Shoe Machinery Co.

~~Consolidated & McKay Lasting Machine Company~~,

(Chase Department)

a corporation incorporated under the laws of the State of ~~Maine~~ New Jersey,

Licensor and party of the first part, and *R. H. Long Shoe Mfg. Co. of Springfield, Mass.* Licensee and party of the second part.

Witnesseth:

Whereas, the Licensor is now the owner of the following Letters Patent of the United States relating to Lasting Machines or auxiliary machines for lasting, to wit: No. 319,784, dated June 9, 1885; No. 337,662, dated March 9, 1886; No. 337,924, dated March 16, 1886; No. 337,925, dated March 16, 1886; No. 338,930, dated March 30, 1886; No. 340,860, dated April 27, 1886; No. 356,619, dated January 25, 1887; No. 356,620, dated January 25, 1887; No. 363,283, dated May 17, 1887; No. 364,088, dated May 31, 1887; No. 376,368, dated January 10, 1888; No. 391,688, dated October 23, 1888; No. 477,788, dated June 28, 1892; No. 477,789, dated June 28, 1892; No. 478,501, dated July 5, 1892; No. 483,375, dated September 27, 1892; No. 545,052, dated August 27, 1895; No. 558,011, dated April 7, 1896; No. 561,189, dated June 2, 1896; No. 566,831, dated September 1, 1896; No. 571,404, dated November 17, 1896; No. 569,590, dated October 13, 1896; No. 569,182, dated October 13, 1896; No. 569,231, dated October 13, 1896; No. 571,339, dated November 17, 1896; No. 571,429, dated November 17, 1896; No. 571,509, dated November 17, 1896; and other patents applied for and now pending, and is, moreover, the owner of other patents not herein enumerated:

And, whereas, the Licensee desires to use the hereinafter described machines belonging to the Licensor: —

Now, therefore, the Licensor, in consideration of one dollar to it paid by the Licensee, the receipt whereof is hereby acknowledged, and of the stipulations and conditions hereinafter contained on the part of the Licensee to be kept and performed, doth loan unto the Licensee the machines designated by their numbers in the following schedule, the said machines embodying some of the foregoing named patents: —

4 Lasting Machines (Chase) Nos *158, 323, 437, 774.*

8 Hand Tackers (Chase Stop Motion) Nos. *305, 307, 1094, 1150, 1456, 1767, 1914, 1980.*

And the Licensor does hereby license the Licensee, and opera-

tives in his employment, to use said specified loaned or rented machines upon the terms and conditions herein set forth; Provided, however, and this loan is made and this license is granted on the expressed Condition, that the Licensee shall faithfully keep and perform all the conditions and stipulations herein contained on his part to be kept and performed, and upon breach of the same or either of them by the Licensee, the Licensor may, at its option, cancel and terminate this loan and license, and upon written notice thereof by the Licensor to the Licensee, or to anyone in the possession or apparent control of the machines, this loan and license shall terminate, and possession of said machines shall thereupon revest in the Licensor. It is also agreed that the Licensor may, at its option, upon breach of any condition herein contained, take possession of said machines or any of them, without termination of this agreement.

And the following are also agreed to as terms and conditions of the loan and license of the machines which the Licensee is hereby licensed to use, all of which, together with those hereinbefore expressed, the Licensee hereby agrees to keep and perform: —

First. — The Licensee is by this loan and license authorized to use the machines hereby loaned, only by himself or operatives in his direct employ and only in *Springfield, Mass.*

He shall not add to nor subtract from the machines any mechanism whatever now or hereafter organized or connected therewith by the Licensor, nor make nor allow to be made any change or alteration in the same, without the consent thereto in writing of the Licensor, nor interfere with the proper operation of the machines, nor any mechanism forming a part thereof, or attached thereto, nor remove nor deface any dates, numbers or inscriptions, now or hereafter impressed thereon or affixed thereto by the Licensor, and shall at all times at his own expense, keep and maintain the machines in as good and efficient working order as the same now are or may hereafter be put by the Licensor. All risks and expense of transportation to and from the Licensee's factory shall be assumed by the Licensee. Inasmuch as the machines are only loaned by the Licensor, and the Licensee pays no purchase

price for the machines, the said machines do and shall continue to belong exclusively to and remain wholly the property of, and subject to the control of the Licensor, and the Licensee acquires no right to buy or to retain said machines except by the written consent of the Licensor. The Licensee agrees to keep the Lasting Machines and accessories in first-class order and repair at his own expense. The Licensee also hereby covenants and agrees to keep the Lasting Machines and accessories insured by a policy satisfactory to the ~~Chase Department of the Consolidated & McKay Lasting Machine Company~~ United Shoe Machinery Co for two hundred dollars each, and to pay all taxes assessed on said machines. In case any Lasting Machines are damaged by fire, directly or indirectly, the Licensee agrees to pay to the Licensor the sum of two hundred dollars for each Lasting Machine, including its accessories, so damaged.

Second. — The Licensor and its agents may, at all reasonable times, have convenient access to the machines to examine and inspect the same and the use thereof, and to repair and improve the same so far as it sees fit; and the covenants, stipulations and conditions herein contained shall apply to all improvements which the Licensor shall hereafter add to the machines and to all patents on said improvements, the right to use which shall be owned by the Licensor, with the same effect as if said patents were included in the list of patents hereinbefore set forth.

Third. — The Licensee agrees to pay unto the Licensor, on the fifteenth (15th) day of each month, as rent or royalty for the previous month for the machines hereby loaned, and for the use of the patents hereby licensed, for each and every pair of shoes or boots lasted by the aid of said machines or any of them, or by the use of said patents or any of them, or in the making of which any of said patents shall be used, the sum set forth in the classified schedule hereto annexed in the column headed "Royalty Value;" and said royalty is hereby agreed upon by and between the parties hereto as the just, fair and correct value to the Licensee for rental of the machines and for use of the patents and inventions hereby licensed to the Licensee by the Licensor, and that the "abated rent or

royalty" hereinafter named is not the true value of the license hereby granted, but is a concession and abatement of such value for and in consideration of the conditions hereto attached, and this agreement and responsibility, and all others in this license contained shall extend to and in respect of all shoes or boots made or lasted by the aid of said machines or on any machine embracing any of the patents which the Licensee is hereby licensed to use, whether made by the Licensee, or by other persons for him; provided, however, that in all cases when the Licensee shall pay to the Licensor, on or before the fifteenth day of each month, the "abated rent or royalty" as hereinafter set forth, per pair for each and every pair of shoes or boots lasted in whole or in part by the use of said machines or patents, or any of them; said payments so duly made shall be full payment and satisfaction of the rent or royalty for the use of said machines and of the license for the use of the patents, for such shoes or boots in respect to which said payments shall have been so duly made, and it is agreed that default of payment of said rent or royalty or of any indebtedness to the Licensor when due, that is, on or before the fifteenth (15th) of each month, shall forfeit the Licensee's right to any abatement of the full rent or royalty, as herein provided. And it is hereby agreed that for each and every pair of shoes and boots made or lasted by the aid of the machines hereby loaned, or made by or for the Licensee by the use of the patents hereby licensed, or any of them, and in respect of which there shall not have been paid the "abated rent or royalty" as hereinbefore set forth, the Licensee shall pay to the Licensor the rental or royalty value named in said classified schedule as liquidated, fixed, and settled damages. It is hereby agreed that the monthly rent or royalty returns shall be computed at "abated rent or royalty". In addition to these agreements relating to rent or royalty, and to the "abated rent or royalty" and to payments as liquidated damages of the full rental or royalty value, in case of neglect or default of or refusal to make payment when due, it is agreed by the Licensee that in case he becomes insolvent or makes an assignment for the benefit of creditors, or in case his property or business goes into the hands of a

receiver, all rent or royalty due to the Licensor shall be at once computed at the full rent or royalty value, as expressed in the schedule of rentals or royalties herewith attached, and the Licensee expressly agrees to this computation of the rental or royalty value, and further agrees not to contest or dispute any claim for the said full rental or royalty value. It is agreed and covenanted by the Licensee that whenever requested, in writing, by the Licensor, he will pay not less than ten dollars per month, as a minimum amount of rental or royalty for the use of each Lasting Machine, except when his factory is not running. But until further notice, given in writing, it is agreed between the parties hereto that if the Licensee pays rental or royalty on or before the fifteenth (15th) of the month following the month when the lasting was done, and otherwise keeps all the terms of this License, there will be a discount made for such payment sufficient to reduce the cost of "abated rent or royalty" on all classes of shoes to one-half cent per pair, excepting on long-legged boots, on which the abatement will be sufficient to reduce the cost to three-fourths of a cent a pair, but it is specially agreed that this abatement ceases upon written notice given by the Licensor to the Licensee.

Fourth.— The Licensee agrees that the operator on each machine shall keep a daily account of the number of pairs of shoes and boots lasted by him and the class to which they belong; which account shall be signed by the operator and verified and signed by the Licensee and forwarded by the Licensee to the Licensor on the first day of each month, and rental or royalty shall be paid by the Licensee on the basis of said account. And the Licensee agrees to give the Licensor, its successors, or assigns, or its or their authorized agent or agents, free access at all times to the premises where the machines hereby loaned are stored or operated, for the purpose of verifying the operators' reports, and in case operators' reports shall not be made as above provided, it shall be the right of the Licensor to appoint a competent man to keep the accounts herein required; and all reasonable compensation for the services and expenses of such man, which shall not exceed three dollars per day,

shall be at the charge of the Licensee, and the Licensee hereby agrees to pay the same.

The Licensee agrees that he will allow the Licensor, its successors, and assigns, and its and their agents at any time hereafter, to attach an indicator or counter to any machine embracing any of the patents hereby licensed, which now is or which may hereafter come into the possession of the Licensee, for the purpose of indicating the number of shoes or boots made, and to examine, modify, repair, or replace the said indicator, and that he, the Licensee, will not disturb or interfere with, nor permit anyone else to disturb or interfere with, any indicator which now is or which may be hereafter placed upon any machine as aforesaid.

Fifth. The Licensee hereby agrees that he will not in any way violate, or infringe, or contest, the validity of any of the patents, or any reissue or extension of the same, which he is hereby licensed to use, or the sufficiency of their specifications, or the validity of the title of the Licensor to said patents, or any of them, and expressly admits the validity and sufficiency thereof.

Sixth. The machines cannot be transferred, and this loan and license is not assignable by the Licensee, by his own act or by operation of law.

Seventh. The power conveyed by this license is only the right to use the said specific machines, and not the right to make, sell, or alter any machines embodying the patents aforesaid, or any of them; and a transfer or removal of the machines hereby loaned can only be made with the written consent of the Licensor; and if the Licensee is or becomes at any time insolvent or bankrupt, or if a sale, lease, transfer, alteration, or removal of said machines shall be made or attempted by the Licensee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Licensee, without the written consent of the Licensor, the possession of said machines shall thereupon revest in the Licensor, and it may take possession of said machines without the Licensee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this license,

or for rental or royalty under this instrument, nor shall he be released thereby from any of the conditions of this agreement.

Eighth. In case any machine hereby loaned shall remain unused for the period of four consecutive months, the Licensor may, at any time thereafter, while it remains unused, cancel this loan and license so far as relates to said unused machines, by giving written notice, as herein provided, that it has elected so to do, and, upon giving such notice, this loan and license shall be terminated to the extent aforesaid, and the possession of said unused machines shall thereupon revest in said Licensor, but in case of such cancellation and reclamation, the Licensee shall thereupon pay the Licensor the sum stated in article twelfth for deterioration of the machines by use or otherwise, and other expenses in reference to the same.

Ninth. In case the Licensee refuses or neglects to perform, or violates any of the conditions of this license, the Licensor shall have the right to terminate this license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this license shall be terminated, or upon taking or demanding possession of the machines without cancellation of this agreement, the possession of said machines shall thereupon revest in the Licensor; and upon the termination of the loan and license by lapse of time, cancellation, breach of condition, or otherwise, it shall be the duty of the Licensee forthwith to deliver the machines hereby loaned and licensed, to the Licensor in good condition, reasonable wear and tear excepted; and upon such termination or taking or demanding possession of the machines by the Licensor, and without prejudice to any other legal rights or remedies for violation of contract, use of machines without right, or use of patents without license, the Licensor or its agents may thereupon enter the premises where said machines may be, and may take and remove the same, and the Licensee shall have no claim whatever on account of any sum or sums he may have paid under this license as rent or royalty or otherwise, nor shall he be released from his agreements contained herein regarding sum due for return of machines, repairs, instruction of operators, deterioration, etc., as mentioned in article twelfth.

Tenth. This license shall continue (unless the Licensor shall cancel this license for breach of condition) until the expiration of all the Letters Patent which the Licensee is hereby licensed to use, and which are or may hereafter be embodied in the hereby loaned machines, and the other patents or improvements referred to shall be considered as included in this license the same as if entered in this license by date and number, or any extensions or renewals of the same; and upon the expiration thereof the Licensee shall deliver to the Licensor the machines and accessories hereby loaned in good order, natural wear and tear alone excepted.

Eleventh. — In case any other machines than those now hereby loaned and licensed, embracing any of the patents hereby licensed, shall hereafter be ordered by, or come into the possession of, the Licensee, then, in case the Licensor shall so elect, all the covenants herein contained shall apply to such machines, and shall govern the parties respectively to the same extent as if the said machines had been expressly included in this loan and license. The Licensor shall give written notice of its election as aforesaid, and the entry into and under this License Agreement of all machines in possession of the Licensee is hereby specially agreed to by the Licensee, but this shall not take away the Licensor's right to refuse such entry in case of machines transferred without the written consent of the Licensor.

Twelfth. — It is declared and understood that it is the intention of the Licensee to use said machines herein licensed for lasting all of the shoes and boots that shall be made by him applicable to the said machines, and not to have them in his possession as the means of reducing the price of hand-lasting, or of controlling hand-lasters, or of influencing a trade with the owners of any other Lasting Machines or of reducing the price thereof, or the prices for labor thereon, and the Licensor enters into this contract because of and by reason of such understanding and intention on the part of the Licensee. It is agreed that the Licensee shall use such machines hereby loaned for lasting all of his shoes and boots, to their full capacity, limited only by the demands of his business; and should the demands of his business require, he shall take and pay for the

loan of such additional machines as may be required to do all his work; and in case any Lasting Machine in this agreement is returned to the Licensor, whether voluntarily or because of the Licensee's insolvency or the appointment of a Receiver for his business, or for non-compliance with this agreement, or otherwise, the Licensee or his assigns shall pay the Licensor one hundred (100) dollars as compensation for setting up each machine at his factory, for instructing operators, and other expenses incurred, and he shall also pay, in addition thereto, the cost of putting the machine into good condition and repair, as well as freight expense of returning the same.

Thirteenth. — It is agreed that the Licensee shall buy of the Licensor, and only of it, all the fittings and all the spare parts for repairing the machines hereby licensed, and also all the string-nail, tack-strips, or other fastenings to be driven by any appliance for lasting the shoes or boots, whether lasted in whole or in part by the aid of any of the machines hereby licensed, or by the use of any of the said patents, or in the making of any of which any of said patents shall be used; and that the same shall be sold by the Licensor at the same prices to all Licensees for the time being. The prices and terms for the same to be fixed by the Licensor; and in all cases whenever the machines are returned to the possession of the Licensor all the accessories, which shall include all spare parts and fittings, shall be returned with the machines, free from any claim as to title, and all unused tack-strips remaining in the possession of the Licensee at the time of the return of the machines shall also be returned to the Licensor's possession free from any claim as to title, but credit for such tack-strips shall be given by the Licensor.

Fourteenth. — All the rights and interests which, under this instrument and by reason of the ownership of said machines and patents and patent rights belonging to the Licensor, shall be deemed to belong to and may be enforced by the Licensor, its representatives, and assigns, and all the stipulations binding on the Licensee shall be binding on his or their representatives or assigns.

Fifteenth. — It is agreed that this instrument may be used for

Licensees of the female sex, or for corporations, and in that case the masculine pronoun denoting the Licensee shall, whenever it occurs, be instead of and indicate the feminine, or neuter, as the case may be; and also that when the party of the second part shall consist of more than one person the termination of the words relating to the said party shall be considered as singular or plural, as the sense may require; and that when the party of the second part so consists of several persons, and they sign this License and Lease for Rental, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained, and also that the numbers of the machines named in or covered by this License and Lease may be entered herein by the Licensor after signing; and that as this instrument is designed and intended for continuous use between the parties hereto, in case the Licensee shall have more than one machine, it is agreed that the termination of words relating to the machine shall be considered as written in the singular or plural, as the number of machines entered in this License and Lease Agreement may require.

CIRCUIT COURT OF THE UNITED STATES.
District of Massachusetts.

In Equity No. 426.

United Shoe Machinery Company
v.
R. H. Long Shoe Manufacturing Company and Richard H. Long.

COMPLAINANT'S EXHIBIT, LONG ADVERTISEMENT.

Grand Rally in Concert Hall Natick Monday Eve. Nov. 5 1906 in the interest of James H. Vahey

The speakers will be Mr. Richard H. Long of South Framingham, Mr. James H. Vahey, Mr. David C. Ahearn of South Framingham, Mr. J. H. O'Brien of Clinton, Mr. Martin C. Hall of Natick and Ex-Sen. A. H. Ray of Ashland.

The Framingham friends of Mr. Vahey will leave on special cars at 7.15 P. M.

Vote for the Interest of Your Town.

VOTE FOR VAHEY

The election of Senator in this district is most important to the business interests of the towns of Framingham, Natick, Ashland, Holliston, Hopkinton and Sherborn.

The Framingham Shoe Company that is controlled by me has begun manufacturing shoe machinery. **I have also become a director of the Duplessis Independent Shoe Machinery Co., a Canadian company**, with a capital of $2,500,000, and **I will finance and control that company.** I am assured of all the money necessary to carry on the business of both companies named above in addition to the shoe factory now running and the new factory now being built.

With all these industries Framingham should grow very fast, and the value of real estate in Framingham and the surrounding towns should increase largely.

Good conditions for the workingmen will be provided in these new industries.

Workingmen whose homes are in Framingham and the towns nearby, who are now working away from their families, may find employment here at good wages.

Ask the workmen in our factory if they are well treated. Ask them if the conditions have improved as our business has grown.

Owing to the ironclad leases that the shoe machinery trust has forced on the shoe manufacturers our companies cannot sell machines to the shoe factories in this state.

McManus owes his nomination to the influence of the counsel of the shoe machinery trust. The trust favors his election.

Vahey will oppose the shoe machinery trust.

Vahey will work for a Bill in the Massachusetts Senate to give our companies the right to sell machines.

Will you help us and help your town by Voting for

JAMES H. VAHEY

Candidate of the Independent Republicans and the Democrats

RICHARD H. LONG

E. BOTTOMLEY & Co.

Manufacturers of Misses', Children's, Boys' and Youths' Low Cuts

Boston Office: 18 Lincoln Street.

Haverhill, Mass., Jan 25 1904

United Shoe Machinery Co.

Gentlemen, We have carefully considered the matter about which your Mr. King was in to see us about the 21st inst and have concluded to continue using the Duplessis Sewing Machine. We also give notice that we shall not pay any royalty for shoes sewn on Machines leased to Eldridge & Demeritt hereafter as we have discontinued using the same. Respectfully yours

E. BOTTOMLEY & Co.

DEFENDANTS' EXHIBIT 75.

[Put in Evidence, page 1441.]

A COMPLETE LINE FOR TURNS

We have a complete line of bottoming machinery for turned shoes, which we can install at short notice.

Haverhill, Mass., is the greatest center for the manu-

facture of turned shoes in the world, and about 50% of the turns made in Haverhill and vicinity, including a large portion of the finest shoes made in the world, are now being sewed on our Sewing Machine.

[Electro here of Turn Sewer and Welter]

The Haverhill (or Fox) Turn Sewer has been on the market for nearly three years and has been brought to a high state of perfection after ten years of experimental work under practical conditions in a large shoe factory. It forms a very smooth, uniformly tight, flat seam, (which will not rip or unravel,) when run at any speed, and to do this requires only a light tension, so that thread breakage is small. 1020 pairs of woman's fine turns, sewed heel seats, have been sewed on it in 8 hours when run at ordinary speed, and at 725 revolutions, at which speed it is sometimes run, it sews at a considerably faster rate. It runs with but slight vibration, the upkeep is small, and it is much easier to operate than any other machine. If the best is wanted, get this machine.

The Haverhill (or Fox) Turn-Sole Channeler, avoids injury to the between substance, does much better work and is twice as rapid as any other channeler. We have had this machine on the market for over five years and is too well known to almost every manufacturer of turned shoes to require description.

We also furnish a full line of Auxiliary Machines for Turn Shoes.

Our machines are put out on rental, or royalty, or are sold. We do not require tying clauses in our leases, as we believe these clauses to be invalid, in view of recent decisions of the courts.

July 29, 1911

Mr. Sidney W. Winslow, United Shoe Mach. Co., Boston, Mass.

Dear Sir:— The Boston News Bureau in its issue of July 26th prints a statement purporting to come from you stating that "The United Shoe Mach. Co., has consistently pursued the policy of giving the same treatment to large and small manufacturers alike."

If this is a fact why is it that we cannot get a line of Welt machinery put in our factory on the same terms that our competitors are having same installed by your company?

Your representative has told us that because we are running two Turn Sole Stitching machines made by a competing company to yours that it will be impossible for us to get our Welt machinery on the same basis as people who do not run these Turn Sole Stitching machines; and this notwithstanding the fact that our royalties on your Goodyear Turn Sole Stitcher so far this year have amounted to $815.73.

Up to this time we have always felt very well pleased with the treatment accorded us by your company, but in view of the above facts we feel that we are unjustly discriminated against.

We would be very glad to have you advise us what we would have to do in order to get a line of Welt machinery in on the same basis you are furnishing our competitors who use nothing but your machines.

Awaiting with interest your reply, we are,

Yours very truly,

Dict. G. A. L. GEO. A. LEARNED CO.

UNITED SHOE MACHINERY COMPANY,
President's Office, Lincoln and Kneeland Sts.
S. W. Winslow, President.

Boston, Mass. August 3, 1911.

George A. Learned Company, Newburyport, Mass.

Gentlemen: Replying to your favor of the 29th of July, in which you quote the following statement from the Boston News Bureau made by me:

"The United Shoe Machinery Company has consistently pursued the policy of giving the same treatment to large and small manufacturers alike."

and you ask:

"If this is a fact why is it that we cannot get a line of Welt machinery put in our factory on the same terms that our competitors are having same installed by your company?"

In reply to your inquiry I desire to say that there is no reason whatever why you cannot get a line of Welt machinery put into your factory upon exactly the same terms as any of your competitors, provided you are ready and willing to respect the contracts already existing between your company and this company, and the contracts that would be signed by you in relation to the line of Welt machinery if put into your factory.

In reference to your statement that you have paid us this year $815.73 royalty on our Goodyear Turn Sewing Machines, would say that you must be misinformed regarding the facts, because our records show that for the use of these machines (of which there are three) you have paid us $296.96 from January, 1911, up to the present time; the last payment being 45 cents for the month of June.

I should be very glad to arrange for an interview with you regarding this whole situation, and if you are violating your existing contracts with us from inadvertence or misunderstanding of

the facts, we shall be very glad to adjust it with you in an equitable manner.

Awaiting your reply, I remain Very truly yours,
SWW–NW S. W. WINSLOW President.

Boston Office 137 Lincoln Street Telephone, 323 Oxford

Aug. 3, 1911.

Mr. Sidney W. Wilson, United Shoe Mach. Co. Boston, Mass.

Dear Sir:—On July 27th your Mr. Gray, connected with the Haverhill office, called on us in connection with a line of Welt machinery that we had considered putting in and which we had asked for a list of different machines together with the terms they are put in on. He informed us that you had two prices for putting these in, a wholesale and a retail price. On the wholesale basis the machines were installed practically free the only charge being on royalties. On the retail basis which was the one we would have to come under owing to the fact that we used the Haverhill Turn Sole Stitchers, the charge for installing a Welt line would be $3000.00. In addition to this the royalty on the Gem Innersoling which is rebated to other manufacturers who use your machines exclusively would not be rebated to us.

In the course of conversation he informed us that a previous agreement which we had made verbally for a price as a return charge on the Goodyear Stitchers would not hold and that it would cost between $400.00 and $500.00 to send back the two machines which we had ordered returned six weeks or two months ago at a return charge of $20.00 a piece.

On July 29th we wrote you asking what we would have to do to get a line of Welt machinery on the same basis that you are furnishing our competitors who use nothing but your machines.

We are very anxious to get this matter straightened out as we have a large new factory under construction which we will be shortly occupying and must plan our output for.

Trusting that you will favor us with the information required, we are, Yours very truly,

Dict. by G. A. L.

DEFENDANTS' EXHIBIT 80.

Geo. A. Learned A. E. Haines

GEO. A. LEARNED CO.

Manufacturers Hand Turned Shoes Newburyport, Mass.

Trade Mark Registered "Popular as the Sun"

Boston Office 137 Lincoln Street Telephone, 323 Oxford

Aug. 4, 1911

Mr. Sidney W. Winslow, United Shoe Mach. Co., Boston, Mass.

Dear Sir: — We are in receipt of your favor of the 3rd inst and note with pleasure your willingness to furnish us a line of Welt Machinery on the same terms that other manufacturers enjoy from you.

We would be pleased to interview you personally as you suggest, but the writer is leaving town today for two or three weeks. Allow us please to state briefly our position and then perhaps you can write us exactly what we will have to do to meet your requirements for the Welt line.

In the first place we never have run but two of your Goodyear Turn Stitchers. The third one was a new model sent us in exchange for one of our old Briggs Machines and your representative said he would have this old machine sent back and we would not have to bother with it at all. We have repeatedly asked him to have this done and he never has attended to it.

We later requested the return of the other Briggs machines at the return charge of $20.00 as agreed upon. This your representative agreed to do a long time ago but has not attended to same up to the present time. Under these conditions we are responsible for only one Goodyear machine.

The reason our Royalties have dropped off with you is because our business is a one season business and we never do much in the summer months. Our operator on the Goodyear Machine got through because there was not enough work to keep him busy. We can, of course, return this one machine if you so desire and run only the Fox Stitchers, but we had intended as soon as business starts up in the fall to get it going again.

We have not knowingly violated any contract with you and are of course entirely ignorant of what your Welt contracts call for.

Regarding the matter of royalties if you will refer to our letter of July 29th, we did not make the statement that we had paid you $815.73 but that our royalties had amounted to that. We quote herewith your bills: —

Jan. 2, 1911	221.76
Feb. 1, 1911	183.85
Mar. 1, 1911	95.85
Apr. 1, 1911	133.05
May 1, 1911	151.39
June 1, 1911	28.93
July 1, 1911	.90
Total	815.73

on which there is a discount of 50% if paid by the 15th of the month, which of course we took advantage of.

Will you please write us pointing out just where we are in error and what we will have to do to get the Welt Machinery on the same terms as our competitors.

Yours very truly,

Dict. by G. A. L. GEO. A. LEARNED Co.

Dec. 6, 1911

Mr. Sidney W. Winslow, Boston, Mass.

Dear Sir: — Mr. Endicott told me last evening that he thought you would appreciate my writing you saying how pleased I was to learn that you did not intend, in our interview of last August, to give me the impression that I went away with; viz that you would drive me out of business if I did not throw out the machines competing with yours.

As I now understand the situation it puts a better light on matters and I will try to overcome as best I can the impression I have been laboring under. Yours very truly,

GEO. A. LEARNED.

President's Office, Lincoln and Kneeland Sts.
S. W. Winslow, President.

Boston, Mass., December 18, 1911.

Mr. George A. Learned, c/o George A. Learned Company, Newburyport, Mass.

Dear Sir: At your interview with me on December 5th (at which there were present Mr. H. B. Endicott and Mr. E. P. Brown, General Manager of our Company) you acknowledged that the statement which you made to Mr. Harriman, to Mr. Endicott's nephew, and others, to the effect that I had said to you, at our interview last August,

"that I would drive you out of business if you did not throw out the machines competing with ours"

was untrue, and that you had no foundation whatever for making such a statement.

You expressed a desire to, and intention of correcting the false statements that you had made to such parties as you had talked with on this subject. Under these circumstances I had expected to receive a frank apology from you. Your letter, therefore, of December 6th, is not such a letter as I had a right to expect to receive.

Very sincerely yours,

S. W. WINSLOW.

Dec. 20, 1911.

Mr. Sidney W. Winslow, United Shoe Mach. Co., Boston, Mass.

Dear Sir:—I am amazed at the statement contained in your letter of the 18th inst.

Not only did I not acknowledge that what I had said about our interview of last August was untrue, but I made it perfectly plain that I recalled substantially your exact words which were what I have always stated them to be.

Not only was my recollection correct, but you know that it was correct and your attempt to put me in the position of a self confessed liar failed absolutely.

My letter of Dec. 6th is exactly in accordance with my statements in the interview of Dec. 5th.

Yours very truly,

GEO. A. LEARNED.

DEFENDANTS' EXHIBIT 94.

[Put in Evidence, page 1685.]

37 Prospect str. Greenwich Conn. Sept. 17 1912.

Mr. John H. Connor Boston, Mass.

Dear Sir: Not having the luck to get a suitable position with your Company, I am trying to get one outside the shoe machinery trade.

As you have known me for the past 14 years, I have taken the liberty to give your address amongst others, to a concern in Detroit, Mich. as reference concerning my ability and character. I am to be engaged there to manage the European sale.

I would beg of you to say a few good words concerning my past record, for wich I shall allways be thankfull to you.

It is my intention to publish my opinion and expirience in the

Superintendent & Foreman regarding the existing shoe machinery question in Europe and will mention all the hardships shoe manufacturers are having with the so called non-royalty machines, as soon as I have succeeded to get the above mentioned position.

Under no circumstances will I represent the Atlas Works any longer than I can help it.

Thanking you for your kindness beforehand

I remain respectfully yours

ALEX STONE.

No. 317,758, dated May 12, 1885.	

And, whereas, the Lessee desires a license to use the inventions, or some of them, which are patented in and by the above recited Letters Patent, and also desires a lease of the machines which are designated by their numbers in the schedule of machines following, viz.:—

SHEDULE OF MACHINES.

Goodyear Turn Machine , No. *529*
Turn Channeler , No.
Moulder , No.

The said machines being the property of the Lessor.

Now, therefore, the Lessor, in consideration of one dollar and

other valuable consideration to it paid by the Lessee, the receipt of which is hereby acknowledged, and in further consideration of the agreements and conditions hereinafter contained, on the part of the Lessee to be kept and performed, doth lease unto the Lessee the machines designated by their numbers in the foregoing Schedule of Machines, and doth license the Lessee and the operatives in his employment to use the machines hereby leased, and also such of the inventions patented as aforesaid as are embodied in the said machines, or either or any of them, but upon the agreements and conditions hereinafter set forth ; and this lease and license is granted by the Lessor and accepted by the Lessee on the express condition that the Lessee shall faithfully keep and perform all the agreements and conditions herein contained on his part to be kept and performed, and upon breach of the same, or either or any of them, by the Lessee, the Lessor may at its option cancel and terminate this lease and license, and upon written notice thereof by the Lessor to the Lessee or to any one in the possession or apparent control of the machines hereby leased, or either or any of them, this lease and license shall terminate, and possession of the said machines shall thereupon re-vest in the Lessor ;

And the Lessee hereby agrees to keep and perform all the following conditions of this lease and license : —

First. The Lessee hereby agrees to use, and is hereby licensed to use the machines hereby leased and the inventions patented as aforesaid only in his factory in *Reading* in the State of *Pennsylvania* and only in the manufacture of boots and shoes, and agrees to keep the said machines in working order at his own expense, and to purchase of the Lessor or its agents all parts for repairing the machines hereby leased, and agrees not to add to or subtract from the said machines any part or mechanism whatever, now or hereafter organized or connected therewith by the Lessor, nor to make nor allow to be made any change or alteration in the same, nor to remove or deface any dates, numbers, or inscriptions now or hereafter impressed thereon, or affixed thereto by the Lessor.

Second. The Lessee hereby agrees to permit the agents and inspectors of the Lessor, at all reasonable times, to have convenient

access to the machines, to examine and inspect the same and the use thereof, and to verify the operator's reports, and to add improvements to the machines as the Lessor may see fit; and the agreements and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, and to all patented inventions hereafter embodied therein, with the same effect as if the patents therefor were included in the foregoing schedule of patents.

Third. The following is the schedule of rents and royalties hereinafter referred to, and which it is understood and agreed is to be paid by the Lessee for each pair of shoes or boots respectively made by the aid of the machines hereby leased, or either or any of them, or by the use of the inventions patented as aforesaid, or either or any of them, viz.:

SCHEDULE OF RENTS AND ROYALTIES FOR GOODYEAR TURNED WORK.

Children's	2	cents per pair.
Misses'	2	" "
Women's	3	" "
Youths'	3	" "
Boys'	3	" "
Men's	3	" "

Fourth. The Lessee hereby agrees to keep proper books of account, and make true and complete entries therein of all transactions relating to the manufacture and sale of all boots and shoes made by him, or by any other person for him or for others, by the aid of the machines hereby leased, or any of them, or by the use of the inventions patented as aforesaid, or either or any of them, and to render an account thereof to the Lessor on or before the tenth day of each month, which account shall specify the number of pairs of boots and shoes made under this lease and license during the calendar month next preceding, and the class to which they belong according to the above schedule; and the Lessee agrees that he will require the operator or operators on said machines to keep a daily account of all boots and shoes made by the aid of said

machines upon the printed forms to be furnished by the Lessor, in duplicate, one copy of which, containing such reports for the calendar month next preceding, the Lessee agrees to send, on or before the tenth day of each month, to the Lessor, and, whenever required by the Lessor, to make oath to the correctness of said returns, and to allow the Lessor, by its agents or attorneys, to examine and take copies or extracts from the original book or books of account of the Lessee, and the accounts kept by the operator or operators as aforesaid; and the Lessee hereby agrees to send to the Lessor, on or before the tenth day of each month, in case the machines hereby leased have not been run during the month next preceding, one of the aforesaid printed forms furnished by the Lessor, marked across the face with the words, "not running" or "not in use."

Fifth. The Lessee agrees to pay unto the Lessor, as rent for the machines hereby leased, and as royalty for the use of the inventions patented as aforesaid as hereby licensed, the rent and royalty specified in the schedule forming part of Section Third herein, on each pair of boots or shoes of the respective kinds mentioned or described in said schedule, made by the aid of the said machines, or either or any of them, or by the use of the said inventions, or either or any of them, the rents and royalties for all such boots and shoes, made as aforesaid during one calendar month, to be due and payable on the first day of the calendar month next following, and to be paid within one month from that day; but the Lessor hereby agrees that **if the rents and royalties due on the first day of any month shall be paid on or before the fifteenth day of that month, it will, in consideration thereof, grant a discount of fifty per cent. from the rents and royalties specified in the schedule aforesaid.**

Sixth. The Lessee agrees that the machines hereby leased shall be used only in the manufacture of boots or shoes known in the trade as "turns" or "turned work," and that he will not use, or permit the use of said machines, or either or any of them, upon boots or shoes of any other class, or for any other purpose, unless the consent in writing of the Lessor shall first have been obtained.

Seventh. The Lessee hereby agrees that he will not in any way violate or infringe, or contest the validity of any of the patents under which he is hereby licensed, or the sufficiency of their specifications, or the validity of the title of the Lessor, or of its successors or assigns, to said patents, or either or any of them.

Eighth. This lease and license is not assignable by the Lessee, by his own act or by operation at law.

Ninth. The following are also agreed to by the parties to this instrument as conditions of this lease and license: —

(*a*) That the power conveyed by this lease and license is only the right to use the said machines, and not the right to make or sell any machine embodying the patents aforesaid, or any of them; and that a transfer or removal of the machines hereby leased, or either or any of them, can only be made with the consent of the Lessor, its successors or assigns; and that if the Lessee is or becomes at any time insolvent or bankrupt, or shall make an assignment for the benefit of his creditors, or if a sale, lease, transfer, or removal of said machines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Lessee, without the written consent of the Lessor, or its successors or assigns, this lease and license shall thereupon terminate and expire; and the Lessor, its successors or assigns, may take possession of said machines without the Lessee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for rent and royalty under this instrument.

(*b*) That in case the Lessee refuses or neglects to perform, or violates, any of the conditions in this lease and license contained, the Lessor, its successors or assigns, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon revest in the Lessor, its successors or assigns, free and discharged of this lease and license; and the Lessor, its successors or assigns, or its authorized agent or agents,

may thereupon enter any premises where said machines may be, and may take and remove them, and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease and license.

(*c*) That this lease and license shall continue (provided the Lessee complies with the agreements and conditions herein contained), until the expiration of all and every the Letters Patent referred to in the foregoing schedule of patents, or any extensions or renewals of the same; and upon the expiration thereof the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased in good order, natural wear and tear alone excepted.

Tenth. In case any other machines than these hereby leased and licensed, embracing any of the inventions patented in the aforesaid Letters Patent, or any of them, or any inventions or improvements for which Letters Patent shall be granted or assigned to the Lessor, shall hereafter come into possession of the Lessee, by exchange or otherwise, without lease or license from the Lessor, its successors or assigns, then in case the Lessor, its successors or assigns, shall so elect, all the covenants herein contained shall apply to such machines, inventions, or improvements, and shall govern the parties respectively to the same extent as if the said machines, inventions, or improvements had been expressly included in this lease and license. The Lessor shall give written notice of its election as aforesaid after it shall have received written notice from the Lessee of the possession of such machines, but may give such notice without having received notice from the Lessee of the possession of such machines.

Eleventh. The Lessee agrees that he will not disturb or interfere with, nor permit any one else to disturb or interfere with, any indicator which now is or which may be hereafter placed upon the machines as aforesaid.

Twelfth. All the rights and interests which under this instrument, and by reason of the ownership of said machines and patents and patent rights belong to the Lessor, shall be deemed to belong to and may be enforced in the names of the Lessor and its succes-

sors and assigns, and all the agreements and conditions binding on the Lessee, shall be binding on his executors or administrators.

Thirteenth. It is agreed that the numbers of the machines named in this lease may be entered herein by the Lessor after signing; and, in case the Lessee shall require more than one machine, it is agreed that the termination of words relating to the machines shall be construed and considered as written in the singular or plural, as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular, as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally hereto.

In witness whereof the Lessor has caused these presents to be signed in its name, and its corporate seal to be affixed hereto by its Treasurer, and the Lessee has set his hand and seal hereto the day and year first above written.

[SEAL] GOODYEAR SHOE MACHINERY COMPANY,
By S. V. A. Hunter, Treasurer.

Executed in duplicate.

DEFENDANTS' EXHIBIT 97.

[Put in Evidence, page 1865.]

[Attached to Defendants' Exhibit 97.]

1808

Lease No. *4152*, Turn Set, made between the Goodyear Shoe Machinery Company as lessor, and *Curtis Jones & Co. of Reading, Pa.* as lessee, dated *June 3d* 1892, is hereby amended as follows:—

Oct 16th 1897

The lessor hereby agrees that the rent and royalty to be paid by the lessee for Children's Turned Shoes, made after January 1, 1897, shall be 1 cent per pair, instead of 2 cents per pair as provided in

the Schedule of Section Third of said lease, on condition, however, that the lessee, while he retains possession of any machine leased to him by the lessor, shall not, without the consent in writing of the lessor, use, or allow to be used in his factory any sewing machine for uniting the soles of turned shoes to their uppers which is not leased to him by the lessor.

Executed in duplicate, *Oct 7th* 1897.

No. 453,999, dated June 9, 1891.	No. 561,386, dated June 2, 1896.

And, whereas, the Lessee desires a license to use the inventions, or some of them, which are patented in and by the above-recited Letters Patent, and also desires a lease of the machines which are designated by their numbers in the schedule of machines following, viz.: —

SCHEDULE OF MACHINES.

Goodyear Turn Machine, No. *537*
Turn Channeler, No. *676*
Moulder, No. *389*
Turn Shoe Trimmer, No.

The said machines being the property of the Lessor: —

Now, therefore, the Lessor, in consideration of one dollar and other valuable consideration to it paid by the Lessee, the receipt of which is hereby acknowledged, and in further consideration of the agreements and conditions hereinafter contained, on the part of the Lessee to be kept and performed, doth lease unto the Lessee the machines designated by their numbers in the foregoing Schedule of Machines, and doth license the Lessee and the operatives in his employment to use the machines hereby leased, and also such of the inventions patented as aforesaid as are embodied in the said machines, or either or any of them, but upon the agreements and conditions hereinafter set forth; and this lease and license is granted by the Lessor and accepted by the Lessee on the express condition that the Lessee shall faithfully keep and perform all the agreements and conditions herein contained on his part to be kept and performed, and upon breach of the same, or either or any of them, by the Lessee, the Lessor, notwithstanding any express or implied waiver of any prior breach, may at its option cancel and terminate this lease and license, and upon written notice thereof by the Lessor to the Lessee or to any one in the possession or apparent control of the machines hereby leased, or either or any of them, this lease and license shall terminate, and possession of the said machines shall thereupon re-vest in the Lessor;

And the Lessee hereby agrees to keep and perform all the following conditions of this lease and license: —

First. The Lessee hereby agrees to use, and is hereby licensed to use, the machines hereby leased and the inventions patented as aforesaid only in his factory in *Reading* in the State of *Pennsylvania* and only in the manufacture of boots and shoes, and agrees to keep the said machines in working order at his own expense and to procure of the Lessor or its agents all parts for repairing the

machines hereby leased, and agrees not to add to or substract from the said machines any part or mechanism whatever, now or hereafter organized or connected therewith by the Lessor, nor to make nor allow to be made any change or alteration in the same, nor to remove or deface any dates, numbers or inscriptions now or hereafter impressed thereon or affixed thereto by the Lessor.

Second. The Lessee hereby agrees to permit the agents and inspectors of the Lessor, at all reasonable times, to have convenient access to the machines, to examine and inspect the same and the use thereof, and to verify the operator's reports, and to add improvements to the machines as the Lessor may see fit; and the agreements and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, and to all patented inventions hereafter embodied therein, with the same effect as if the patents therefor were included in the foregoing schedule of patents.

Third. The following is the schedule of rents and royalties hereinafter referred to, and which it is understood and agreed is to be paid by the Lessee for each pair of shoes or boots respectively made by the aid of the machines hereby leased, or either or any of them, or by the use of the inventions patented as aforesaid, or either or any of them, viz.: —

SCHEDULE OF RENTS AND ROYALTIES FOR GOODYEAR TURNED WORK.

Children's . . .	2 cents per pair.
Misses'	2 " "
Women's . . .	3 " "
Youths' . . .	3 " "
Boys'	3 " "
Men's	3 " "

Fourth. The Lessee hereby agrees to keep proper books of account, and make true and complete entries therein of all transactions relating to the manufacture and sale of all boots and shoes made by him, or by any other person for him or for others, by the aid of the machines hereby leased, or any of them, or by the use of

the inventions patented as aforesaid, or either or any of them, and to render an account thereof to the Lessor on or before the tenth day of each month, which account shall specify the number of pairs of boots and shoes made under this lease and license during the calendar month next preceding, and the class to which they belong according to the above schedule of rents and royalties; and the Lessee agrees that he will require the operator or operators on said machines to keep a daily account of all boots or shoes made by the aid of said machines upon the printed forms to be furnished by the Lessor, in duplicate, one copy of which, containing such reports for the calendar month next preceding, the Lessee agrees to send, on or before the tenth day of each month, to the Lessor, and, whenever required by the Lessor, to make oath to the correctness of said returns, and to allow the Lessor, by its agents or attorneys, to examine and take copies or extracts from the original book or books of account of the Lessee and the accounts kept by the operator or operators as aforesaid; and the Lessee hereby agrees to send to the Lessor, on or before the tenth day of each month, in case the machines hereby leased have not been run during the month next preceding, one of the aforesaid printed forms furnished by the Lessor, marked across the face with the words "not running", or "not in use."

Fifth. The Lessee agrees to pay unto the Lessor, as rent for the machines hereby leased, and as royalty for the use of the inventions patented as aforesaid as hereby licensed, the rent and royalty specified in the schedule forming part of Section Third herein, for each pair of boots or shoes of the respective kinds mentioned or described in said schedule, made by the aid of the said machines, or either or any of them, or by the use of the said inventions, or either or any of them; the rents and royalties for all such boots and shoes, made as aforesaid during one calendar month, to be due and payable on the last day of the calendar month next following; but the Lessor hereby agrees that, **if the rents and royalties due on the last day of any month shall be paid on or before the fifteenth day of that month, it will, in consideration thereof, grant a dis-**

count of fifty per cent. from the rents and royalties specified in the schedule aforesaid.

Sixth. The Lessee agrees that the machines hereby leased shall be used only in the manufacture of boots or shoes known in the trade as "turns" or "turned work," and that he will not use or permit the use of said machines, or either or any of them, upon boots or shoes of any other class, or for any other purpose, unless the consent in writing of the Lessor shall first have been obtained, and that he will not use, or permit the use, in his factory, of any sewing machine for uniting the soles of turn shoes to their uppers which is not leased to him by the Lessor, unless the consent in writing of the Lessor shall first have been obtained.

Seventh. The Lessee hereby agrees that he will not in any way violate or infringe, or contest the validity of, any of the patents under which he is hereby licensed, or the sufficiency of their specifications, or the validity of the title of the Lessor, or of its successors or assigns, to said patents, or either or any of them.

Eighth. This lease and license is not assignable by the Lessee, by his own act or by operation of law.

Ninth. The following are also agreed to by the parties to this instrument as conditions of this lease and license: —

(a) That the power conveyed by this lease is only the right to use the said machines, and not the right to make or sell any machines embodying the patented inventions aforesaid, or any of them; and that a transfer or removal of the machines hereby leased, or either or any of them, can only be made with the consent of the Lessor, its successors or assigns; and that if the Lessee is or becomes at any time insolvent or bankrupt, or shall make an assignment for the benefit of his creditors, or if a sale, lease, transfer or removal of said machines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative or assignee, as the property of the Lessee, without the written consent of the Lessor, or its successors or assigns, this lease and license shall thereupon terminate and expire, and the Lessor, its successors or assigns, may take possession of said machines without the Lessee having any claim for the repay-

ment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for rent and royalty under this instrument.

(b) That in case the Lessee refuses or neglects to perform, or violates, any of the conditions in this lease and license contained, the Lessor, its successors or assigns, notwithstanding any express or implied waiver of any prior breach, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon revest in the Lessor, its successors or assigns, free and discharged of this lease and license; and the Lessor, its successors or assigns, or its authorized agent or agents, may thereupon enter any premises where said machines may be, and may take and remove them, and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease or license.

(c) That this lease and license shall continue (provided the Lessee complies with the agreements and conditions herein contained) until the expiration of all and every the Letters Patent referred to in the foregoing Schedule of Patents, or any extensions or renewals of the same, and upon the expiration thereof the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased in good order, natural wear and tear alone excepted.

Tenth. In case any other machines than those hereby leased and licensed, embracing any of the inventions patented in the aforesaid Letters Patent, or any of them, or any inventions or improvements for which Letters Patent shall be granted or assigned to the Lessor, shall hereafter come into possession of the Lessee, by exchange or otherwise, without lease or license from the Lessor, its successors or assigns, then in case the Lessor, its successors or assigns, shall so elect, all the covenants herein contained shall apply to such machines, inventions or improvements and shall govern the parties respectively to the same extent as if the said machines, inventions or improvements had been expressly included in this lease and license. The Lessor shall give written notice of

its election as aforesaid after it shall have received written notice from the Lessee of the possession of such machines, but may give such notice without having received notice from the Lessee of the possession of such machines.

Eleventh. The Lessee agrees that he will not disturb or interfere with, nor permit anyone else to disturb or interfere with, any indicator which now is or which may be hereafter placed upon the machines as aforesaid.

Twelfth. All the rights and interests which, under this instrument, and by reason of the ownership of said machines and patents and patent rights, belong to the Lessor, shall be deemed to belong to and may be enforced in the names of the Lessor and its successors and assigns, and all the agreements and conditions binding on the Lessee shall be binding on his legal representatives.

Thirteenth. It is agreed that the numbers of the machines named in this lease may be entered herein by the Lessor after signing; and, in case the Lessee shall require more than one machine, it is agreed that the termination of words relating to the machines shall be construed and considered as written in the singular or plural as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally hereto.

In witness whereof, the Lessor has caused these presents to be signed in its name, and its corporate seal to be affixed hereto by its Treasurer, and the Lessee has set his hand and seal hereto the day and year first above written.

GOODYEAR SHOE MACHINERY COMPANY,

Jan. 23, 1902.

Messrs. Curtis, Jones & Co., Reading, Pa.

Gentlemen: — Replying to your letter of January 17th, in which you ask us to change your leases of the Metallic department to the Independent lease, I will quote as follows from the Rider, which we agree, upon request, to attach to the United form of lease which you now hold.

"The lessee, if not in default in any respect with any of the conditions, agreements, stipulations, and provisions in the lease No. granted by the undersigned for certain Metallic department machinery, upon giving at least thirty days notice in writing of his intention so to do, shall have the privilege of surrendering this United lease and license at any time before February 1st, 1902, by executing the Independent form of lease and license agreement in respect to the leased machinery."

You will see from this that the time for changing from the United to the Independent form of lease has really passed, but we are willing that you should make the change now if you desire to,

and we enclose you herewith copy of the Independent form of lease for your signature. Yours truly,

UNITED SHOE MACHINERY COMPANY,

[Put in Evidence, page 2088.]

CIRCUIT COURT OF THE UNITED STATES,
DISTRICT OF MASSACHUSETTS.

IN EQUITY.

JAMES W. BROOKS and FRANK F. STANLEY, Trustees of the McKay Metallic Fastening Association,

v.

ALBERT VAN WAGENEN, LOUIS GODDU, LOUIS H. GODDU, NAPOLEON GODDU, GEORGE GODDU, WILLIAM GODDU, ELOIE GODDU, the GODDU SONS METAL FASTENING COMPANY, and GEORGE N. SMALLEY.

BILL OF COMPLAINT.

To the Honorable the Judges of the Circuit Court of the United States in and for the District of Massachusetts:

James W. Brooks of Petersham in the state of Massachusetts, and Frank F. Stanley of Swampscott in said state of Massachusetts, trustees of the McKay Metallic Fastening Association, under a declaration of trust dated the 9th day of June, 1877, both being citizens of the said state and of the United States, bring this bill of complaint against Louis Goddu, Louis H. Goddu, Napoleon Goddu, George Goddu, William Goddu, Eloie Goddu, all of Winchester in said state, and against Albert Van Wagenen of Newton in said state, and George N. Smalley of Westboro in said state, all of said defendants being inhabitants of said state and the district aforesaid; and also against the Goddu Sons Metal Fastening Company, a corporation duly organized under the laws of the state of Maine, said corporation having committed acts of infringement in the said state of Massachusetts and district of Massachusetts, and having a regular and established place of business in said state of Massachusetts and district of Massachusetts.

And thereupon your orators complain and say, on information and belief, —

That on and prior to the twenty-sixth day of September A. D. 1882, Louis Goddu of Winchester in the commonwealth of Massachusetts was the original and first inventor of a certain new and useful improvement in machines for driving sole-fastenings, not in public use or on sale for more than two years prior to his application for a patent next hereinafter mentioned, and not known or used by others in this country or patented or described in any printed publication in this or any foreign country before his invention thereof, and not abandoned; and that, being such original and first inventor, the said Louis Goddu, before the said twenty-sixth day of September A. D. 1882, made application in due form of law to the Commissioner of Patents of the United States for Letters Patent for the said invention, and duly swore to the specification thereof, and the said Louis Goddu, by an assignment in writing, duly executed on the first day of June A. D. 1882, and recorded in the United States Patent Office on the second day of October A. D. 1882, assigned said application, the invention therein contained, and the Letters Patent which might be granted therefor, to Gordon McKay, then of Newport in the state of Rhode Island, and James W. Brooks, then of Cambridge in the commonwealth of Massachusetts, respectively, principal and associate trustees of the McKay Metallic Fastening Association of Boston, their successors and assigns, and requested the Commissioner of Patents to issue the Letters Patent that might be granted for the said invention to the said McKay and Brooks, as said trustees. And such proceedings were had that, on the said twenty-sixth day of September A. D. 1882, Letters Patent of the United States numbered 265,227 were granted on the said application for the said invention therein described and claimed, to the said Louis Goddu, his heirs or assigns, in conformity with the requirements of the statutes in such case made and provided; and the said Letters Patent in their terms granted to the said Goddu, his heirs or assigns, for the term of seventeen years from the said twenty-sixth day of September A. D. 1882, the exclusive right to make, use, and vend throughout the

United States and the territories thereof the invention therein described and claimed, referring to the specification for further particulars thereof; and your orators bring here into court a duly authenticated copy of said Letters Patent, and pray that the same may be taken as a part of this bill.

And your orators further aver on information and belief that, under and in accordance with the terms of the said declaration of trust dated the ninth day of June A. D. 1877, they are the true and lawful successors of the said McKay and Brooks, trustees, and that by virtue of the said assignment the said McKay and Brooks then became, on said twenty-sixth day of September A. D. 1882, and your orators, as successors in the said trust of the said McKay and Brooks, subsequently thereto, but prior to the infringement hereinafter complained of, became, and your orators ever since have been and are now, entitled to and possessed of the full and exclusive right and liberty to make, construct, use, and vend to others to be used, the aforesaid invention within and throughout the United States and the territories thereof, as in and by said assignment, or a certified copy thereof here in court to be produced, will more fully appear.

And your orators further aver on information and belief that on and prior to the 29th day of May A. D. 1888, Louis Goddu of Winchester in the commonwealth of Massachusetts was the original and first inventor of a certain new and useful improvement in nailing-machines, not in public use or on sale for more than two years prior to his application for a patent next hereinafter mentioned, and not known or used by others in this country, or patented or described in any printed publication in this or any foreign country before his invention thereof, and not abandoned; and that, being such original and first inventor, the said Louis Goddu, before the said 29th day of May A. D. 1888, made application in due form of law to the Commissioner of Patents of the United States for Letters Patent for his said invention, and duly swore to the specification thereof, and assigned said invention and application, and the Letters Patent that should be granted on said application, to James W. Brooks, then of Cambridge in the commonwealth of Massachusetts,

in trust for the McKay Metallic Fastening Association of Boston in said commonwealth, and requested the Commissioner of Patents to issue the Letters Patent that should be granted on said application to the said James W. Brooks, trustee as aforesaid. Whereupon such proceedings were had that, on the said 29th day of May A. D. 1888, Letters Patent of the United States numbered 383,455 were granted on the said application for the invention therein described and claimed, to the said James W. Brooks, as trustee as aforesaid, as assignee of the said Louis Goddu, in conformity with the requirements of the statutes in such case made and provided; and the said Letters Patent in their terms granted to the said James W. Brooks as trustee, his successors and assigns, for the term of seventeen years from said last-mentioned day, the exclusive right to make, use, and vend the invention therein described and claimed throughout the United States and the territories thereof, referring to the specification for the particulars thereof; and your orators bring here into court a duly authenticated copy of said Letters Patent, and pray that the same may be taken as a part of this bill.

And your orators further aver on information and belief that by a valid assignment duly recorded in the office of the Commissioner of Patents of the United States, all the right, title, and interest of the said James W. Brooks as trustee in and to the said Letters Patent, and in and to the invention secured by said Letters Patent, became vested in your orators, and your orators then became, and ever since have been, and now are, entitled to and possessed of the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the aforesaid invention within and throughout the United States and the territories thereof; and that by the said assignment all claims and demands, either at law or in equity, which the said James W. Brooks as trustee had at the date of the said assignment, or might thereafter acquire, on account of any infringement of the said Letters Patent prior to the date of the said assignment, were duly assigned and secured to your orators, as in and by the said assignment, or a certified copy thereof, here in court to be produced, will more fully appear.

And your orators further aver on information and belief that on

and prior to the tenth day of July A. D. 1888, Louis Goddu of Winchester in the commonwealth of Massachusetts was the original and first inventor of a certain new and useful improvement in boot and shoe nailing machines, not in public use or on sale for more than two years prior to his application for a patent next hereinafter mentioned, and not known or used by others in this country or patented or described in any printed publication in this or any foreign country before his invention thereof, and not abandoned; and that, being such original and first inventor, the said Louis Goddu, before the said tenth day of July A. D. 1888, made application in due form of law to the Commissioner of Patents of the United States for Letters Patent for his said invention, and duly swore to the specification thereof, and assigned said invention and application, and the Letters Patent which should be granted on said application, to your orators, the said James W. Brooks, then of Cambridge in the commonwealth of Massachusetts, as trustee, and the said Frank F. Stanley of Swampscott in said commonwealth, as associate trustee, of the McKay Metallic Fastening Association of Boston in said commonwealth, and requested the Commissioner of Patents to issue the Letters Patent that should be granted on said application to your orators as trustees as aforesaid. Whereupon such proceedings were had that, on the said tenth day of July A. D. 1888, Letters Patent of the United States numbered 385,802 were granted on the said application for the invention therein described and claimed, to your orators, the said James W. Brooks, trustee, and the said Frank F. Stanley, associate trustee, as assignees of the said Louis Goddu, in conformity with the requirements of the statutes in such case made and provided; and the said Letters Patent in their terms granted to your orators, the said James W. Brooks, trustee, and the said Frank F. Stanley, associate trustee, their successors or assigns, for the term of seventeen years from the said tenth day of July A. D. 1888, the exclusive right to make, use and vend throughout the United States and the territories thereof, the invention therein described and claimed, referring to the specification for the particulars thereof; and your orators bring here into court a duly authen-

ticated copy of said Letters Patent, and pray that the same may be taken as a part of this bill.

And your orators further aver on information and belief that ever since the issue of said Letters Patent, they have been, and now are, entitled to and possessed of the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the aforesaid invention within and throughout the United States and the territories thereof.

And your orators further aver on information and belief that on and prior to the twenty-seventh day of November A. D. 1883, William P. Hopkins, then of Lawrence in the commonwealth of Massachusetts, was the original and first inventor of a certain new and useful improvement in nailing-machines, not in public use or on sale for more than two years prior to his application for a patent next hereinafter mentioned, and not known or used by others in this country, or patented or described in any printed publication in this or any foreign country before his invention thereof, and not abandoned; that, being such original and first inventor, the said William P. Hopkins, before the said twenty-seventh day of November A. D. 1883, made application in due form of law to the Commissioner of Patents of the United States for Letters Patent for his said invention, and duly swore to the specification thereof, and assigned his said invention and application, and the Letters Patent that should be granted on said application, to Gordon McKay, then of Newport in the state of Rhode Island, and James W. Brooks, then of Cambridge in the commonwealth of Massachusetts, trustees of the McKay Metallic Fastening Association, and requested the Commissioner of Patents to issue the Letters Patent that should be granted on said application to the said McKay and Brooks, trustees. Whereupon such proceedings were had that, on the said twenty-seventh day of November A. D. 1883, Letters Patent of the United States numbered 289,103 were granted on the said application for the invention therein described and claimed, to the said McKay and Brooks, trustees, as assignees of the said William P. Hopkins, in conformity with the requirements of the statutes in such case made and provided; and the said Letters Patent in their

terms granted to the said McKay and Brooks, as trustees, their successors or assigns, for the term of seventeen years from the said twenty-seventh day of November A. D. 1883, the exclusive right to make, use, and vend throughout the United States and the territories thereof the invention therein described and claimed, referring to the specification for the particulars thereof; and your orators bring here into court a duly authenticated copy of the said Letters Patent, and pray that the same may be taken as a part of this bill.

And your orators further aver on information and belief that they are the true and lawful successors as aforesaid of the said McKay and Brooks, trustees, and that by reason of being such successors they became, prior to the infringement hereinafter complained of, and ever since have been, and now are, entitled to and possessed of the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the aforesaid invention within and throughout the United States and the territories thereof.

And your orators further aver on information and belief that, prior to the eighteenth day of January A. D. 1887, Henry Dunham, then of Abington in the commonwealth of Massachusetts, was the original and first inventor of a certain new and useful improvement in boot or shoe nailing machines, not in public use or on sale for more than two years prior to his application for a patent next hereinafter mentioned, and not known or used by others in this country, or patented or described in any printed publication in this or any foreign country before his invention thereof, and not abandoned; and that, being such original and first inventor, the said Henry Dunham, before the said eighteenth day of January A. D. 1887, made application in due form of law to the Commissioner of Patents of the United States for Letters Patent for his said invention, and duly swore to the specification thereof; and thereafter, but before Letters Patent issued on his said application, he, the said Henry Dunham, died; and thereafter his administratrix, Ella B. Dunham, assigned his said invention and application, and the Letters Patent that should be granted on said application, to Henry S. Jenkins of Boston in the commonwealth of Massachusetts, trustee

for the Clinching Screw Company. Whereupon such proceedings were had that, on the said eighteenth day of January A. D. 1887, Letters Patent of the United States numbered 356,107 were granted on the said application for the invention therein described and claimed to the said Henry S. Jenkins, trustee, as assignee of the said Ella B. Dunham, administratrix, in conformity with the requirements of the statutes in such case made and provided; and the said Letters Patent in their terms granted to the said Henry S. Jenkins, trustee, his successors or assigns, for the term of seventeen years from the said eighteenth day of January A. D. 1887, the exclusive right to make, use, and vend the invention therein described and claimed throughout the United States and the territories thereof, referring to the specification for the particulars thereof; and your orators bring here into court a duly authenticated copy of said Letters Patent, and pray that the same may be taken as a part of this bill.

And your orators further aver on information and belief that, by valid assignments duly recorded in the office of the Commissioner of Patents of the United States, all the right, title, and interest of the said Henry S. Jenkins, trustee, and of the said Clinching Screw Company, for which the said Henry S. Jenkins held the said Letters Patent in trust, in and to the said Letters Patent and in and to the invention secured by said Letters Patent, became vested in your orators prior to the infringement herein complained of, and your orators then became, and ever since have been, and now are, entitled to and possessed of the full and exclusive right and liberty of making, constructing, using, and vending to others to be used, the aforesaid invention within and throughout the United States and the territories thereof, as in and by said assignments, or certified copies thereof here in court to be produced, will more fully appear.

And your orators further aver on information and belief that the said several inventions for which the said several Letters Patent were granted are capable of conjoint use in one and the same machine, and that all of said inventions have been so conjointly used

in the machines constructed, used, or sold by the defendants, as hereinafter complained of.

Your orators further show on information and belief that they and their predecessors in title have invested and expended large sums of money, and have been to great trouble and expense in and about the said several inventions and in the manufacture of machines embodying the several inventions described and claimed in the said several Letters Patent; that the said several inventions have been and are of great benefit and advantage to the public, and that the public generally have acquiesced in the rights of your orators and their predecessors in title, as secured by the said several Letters Patent, except for the infringement hereinafter set forth, and that the said several inventions have been of great profit to your orators; and that your orators are engaged in making and leasing to shoe manufacturers, or otherwise disposing of machines constructed according to and embodying the several inventions shown and described in the said several Letters Patent, and are able to make and fill all demands for such machines on the part of the public and persons desiring to use the same, throughout the United States and the territories thereof; and your orators will continue to make and to lease and otherwise dispose of large numbers of such machines, and realize great profits therefrom unless interfered with by the unlawful acts of the said defendants, as hereinafter set forth; and that the infringement by the defendants hereinafter set forth has done and still is doing, great and irreparable damage to your orators, and deprives your orators of great gains and profits to which they are justly entitled under the law, and which they would surely receive except for the unlawful acts of the said defendants, and encourages other persons to use the said several inventions in infringement of your orators' rights under the said several Letters Patent, to the great and irreparable detriment of your orators.

Yet that the said several defendants, well knowing the premises, and the rights and privileges as aforesaid secured to your orators by the said several Letters Patent, but contriving to injure your orators and deprive them of the profits, benefits, and advantages which might and otherwise would have accrued to them from the

said several Letters Patent, have since the first day of October 1895, within the said district of Massachusetts, and elsewhere within the United States and territories thereof, unlawfully, wrongfully, and without license of your orators made, constructed, used, sold, or leased, and are still making, constructing, using, selling, leasing, and intending to make, use, and sell or otherwise dispose of to shoe manufacturers, machines constructed according to and containing the said several inventions patented in and by the said several Letters Patent, in violation and infringement of the aforesaid rights and privileges of your orators, but how many of the infringing machines the defendants have so made, constructed, used, or sold, or are now making, constructing, using, or selling, your orators are ignorant and cannot set forth, but they aver that the said defendants have derived and received and are still deriving and receiving, from the said construction, use, or sale, great gains and profits, but to what amount your orators are ignorant and cannot set forth, and your orators pray that the said defendants may be required to make a disclosure of all such gains and profits.

And your orators aver that the defendants are prepared and ready to continue such infringement, and threaten so to do; and will do so unless they are restrained from so doing by this honorable court, and your orators will suffer great and irreparable damage from the said unlawful acts of the said defendants.

And your orators aver that they and their predecessors in title, and all persons making or vending the machines or mechanisms patented by the said several Letters Patent for or under your orators or their predecessors in title, have given sufficient notice to the public that all articles made, used, or vended, or otherwise disposed of by your orators or their said predecessors in title, or made, or sold for or under your orators or their said predecessors in title, and patented in and by the said several Letters Patent, are patented by fixing thereon the word "Patented", together with the days and years on which the said several Letters Patent were granted respectively, or when, from the character or the article, this could not be done, by affixing to it or to the package wherein one or more of said articles were enclosed, a label containing the like notice.

And your orators further aver that the said defendants were duly notified of the said infringement herein complained of, and that the defendants have continued after such notice to make, use, and vend or otherwise dispose of machines infringing each of said several Letters Patent.

Your orators further complain and say that the McKay Metallic Fastening Association was formed on the 9th day of June, 1877, by the execution of a trust deed or declaration, and that under said trust deed Gordon McKay became the principal trustee and your orator James W. Brooks the associate trustee, and in accordance with the terms of said trust deed the principal trustee was vested with authority to transact the business of the Association under the direction of an executive committee composed of five shareholders of the Association, and also by the terms of said instrument the principal trustee was given authority to sign the name of the associate trustee to all transfers of patents, licenses, leases, and instruments whatsoever.

Thereafter, on the 13th day of July, 1884, the said Gordon McKay resigned as principal trustee, and your orator James W. Brooks became principal trustee in his place, and your orator Frank F. Stanley became associate trustee, and from and ever since the said last-mentioned date your orator James W. Brooks has been the principal trustee of the Association, having the executive control and management of the business, and your orator Frank F. Stanley has been the associate trustee.

Your orators further say that the said McKay Metallic Fastening Association was formed for the purpose of developing certain inventions and machines of the defendant Louis Goddu for inserting screws into the soles of boots and shoes, and also to develop certain tacking machines of the defendant Goddu which were adapted to drive a fastening for holding or securing together certain parts of a boot or shoe.

Your orators further aver that prior to the formation of said McKay Metallic Fastening Association the defendant Louis Goddu had made a number of inventions relating to machines for inserting metallic fastenings, and taken out Letters Patent of the United

States therefor, and had constructed or caused to be constructed machines embodying his inventions, including machines for inserting screws in the soles of boots and shoes, and also including cable-wire tacking machines for fastening the outer soles of boots and shoes to the uppers and inner soles, and for other kindred uses in the manufacture of boots and shoes.

These inventions and machines, embodying the inventions of the said defendant Louis Goddu, had been assigned by the said Louis Goddu to a corporation named the American Cable Screw Wire Company. On the 9th day of June, 1877, the said Gordon McKay, as the principal trustee of the McKay Metallic Fastening Association, and your orator the said James W. Brooks, as the associate trustee of said Association, bought from the said American Cable Screw Wire Company all the inventions, patents, and machines of the said defendant Goddu which had been assigned by him as aforesaid to the American Cable Screw Wire Company and also took over from the American Cable Screw Wire Company certain inventions and patents of the defendant Van Wagenen which had been assigned by the defendant Van Wagenen to the American Cable Screw Wire Company.

Your orators further aver that the said defendant Louis Goddu had shown rare inventive genius in inventing, originating, and developing these metallic-fastening machines, and that it was essential, if the said McKay Metallic Fastening Association was to carry on the business of developing and pefecting the said defendant Louis Goddu's machinery, that it should have the said Louis Goddu's future inventions relating to machines for driving metallic fastenings, and should secure his services as inventor to perfect his machines. Accordingly the said McKay and your orator the said Brooks, as trustees of the said Association, on the 9th day of June, 1877, purchased from the said defendant Louis Goddu personally, all future inventions which he should make for seventeen years relating to metallic fastenings or metallic-fastening machinery. Since the said 9th day of June, 1877, your orators have purchased from the said Louis Goddu all the metallic-fastening inventions made by him during his life, so that your orators are now, and

have been ever since the formation of the said Association, entitled to all inventions relating to metallic fastenings or metallic-fastening machines made by the said Louis Goddu. Besides thus purchasing the future metallic-fastening inventions of the defendant Louis Goddu, the trustees of the McKay Metallic Fastening Association also entered into a contract with Louis Goddu to secure his services as inventor to develop and perfect his machines acquired by the Association as aforesaid. By this contract, dated the 18th day of August, 1877, the defendant Louis Goddu promised to work for the McKay Metallic Fastening Association as inventor, and to use his best endeavors, faithfully, properly, economically, and in a good and workmanlike manner, to invent, devise, and construct metallic-fastening machinery. The said Louis Goddu has been paid by the Association for his services as inventor, large amounts of money in each year, and the total sum thus paid Louis Goddu by your orators as trustees for the Association exceeds two hundred and fifty thousand dollars.

Your orators further say that the plan of business adopted by the said McKay Metallic Fastening Association was to lease its patented machinery to shoe manufacturers in the United Stated and Canada, and to sell its machinery in other foreign countries. In the leases for all machines leased and licensed for use in the United States and Canada, shoe manufacturers have always agreed to purchase from the Association the fastening material used in the machines thus leased by the Association, and as it is agreed in the lease and license that the fastening material thus purchased by the licensees of the Association shall be sold by the Association at prices considerably above the cost of the fastening material, the Association in this way has obtained from the manufacturers a license fee or royalty for the use of its leased patented machinery.

Your orators further aver that, as the said Goddu machines originally taken over by the Association as aforesaid from the American Cable Screw Wire Company have continued to be developed and improved by the embodiment therein of further inventions of the said Louis Goddu, and as the Association has begun to lease to shoe manufacturers additional machines subsequently invented and devel-

oped by the said Louis Goddu, the business of the Association has steadily increased in size until, at the present time, the Association has over five thousand machines out under lease and license to shoe manufacturers in the United States and Canada, and is making sales of metallic-fastening material to its licensees at the rate of over three million pounds per year, and the gross receipts from the business of the Association exceed a million dollars per year.

Your orators further aver that simultaneously with the numerous inventions which have been made from time to time by the defendant Louis Goddu relating to machines for driving metallic fastenings, the said Louis Goddu, as the inventor of the Association, has made many inventions relating to new and improved metallic fastenings, and the said Louis Goddu, as the inventor of the Association, has made also many inventions relating to machinery for the production of the metallic fastenings sold by the Association to shoe manufacturers for use in the machines of the Association leased and licensed to them.

Your orators further say that upon the purchase of the Goddu and Van Wagenen inventions and patents from the American Cable Screw Wire Company, as above described, the defendant, the said Albert Van Wagenen, entered the employ of the Association and for some years previous to October 1, 1895, when Van Wagenen voluntarily left the employ of your orators, he occupied a position of confidence in the Association, — one of his especial duties being to see that the various inventions which the said Louis Goddu made from time to time as the inventor of the Association were duly patented. In this way the said Van Wagenen obtained a complete and thorough knowledge of the metallic-fastening art, and especially a knowledge of the large number of patents belonging to your orators, and the validity and scope of the claims thereof. And your orators further aver that it was customary for the defendant Van Wagenen, acting in this confidential capacity, to keep himself constantly informed as to just what improvements were being devised and invented by the said Louis Goddu, and to make it a part of his duty always to accompany the defendant Louis Goddu to the patent solicitor of the Association for the purpose of aiding the said Goddu

in expressing his ideas and in preparing his applications for Letters Patent. And your orators aver that because he thus served the Association in this confidential capacity, the defendant Van Wagenen succeeded in maintaining the most intimate relationship between himself and the said Louis Goddu, and at the same time obtained a detailed knowledge of the large number of patents belonging to the Metallic Association, and of the meaning and scope of the claims therein, and of the state of the patented art, which was and is today more extensive than the knowledge of any other person in the employ of the Association.

Your orators further aver that as the five sons of the defendant Louis Goddu grew up one by one, they were, at the request of their father, taken into the employ of the Association, and these five sons, who are the defendants Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, and George Goddu, were almost entirely engaged, while thus employed by the Association, in assisting their father, first, to embody his inventions in the wooden patterns which he was accustomed to make, and then to aid him in assembling and getting into running order the first experimental machine made from these patterns, so as to reduce the inventions of their father to practice and to make a machine perfect in design and detail so that its manufacture could be readily undertaken in large quantities.

Your orators further aver that during all the years that these five sons of the defendant Louis Goddu were in the employ of the Association, although they were working nearly all the time in the inventive department of the business, and most of the time in the very room where their father was making his inventions, and were thus placed under the most favorable conditions possible, and moreover had the strongest pecuniary incentives to make inventions in the metallic-fastening line, yet in fact, as your orators are informed and believe, the said five sons never did make any inventions whatever, but proved that, although they were good mechanics and experimenters, they did not have inventive ability.

Your orators further aver that about the beginning of the year 1895 the defendant Louis Goddu became very angry with your ora-

tor the said Brooks, as the principal trustee of the Association, and with the executive committee of the Association, because it was not deemed proper that he, as the inventor of the Association, should interfere with the management of the factory of the Association and the duties of the superintendent regularly employed by the Association for the purpose of managing the said factory, and the said Louis Goddu used language to your orators, the said Brooks and other members of the executive committee of the Association, which was, and was clearly intended to be, a threat that unless he were given his way he would in future take out patents for his metallic-fastening inventions in the names of his sons. At about this same time the defendant Van Wagenen also made the same threat to your orator the said Brooks, as the principal trustee of the Association, that the said Louis Goddu would in future take out patents for his metallic-fastening inventions in the names of his sons.

Your orators further aver that at the time when the defendant Louis Goddu thus became angry because he was not allowed to interfere with the management of the factory of the Association, and at about the time when the said threats were made to your orator the said James W. Brooks, and to other officers of the Association, by the defendant Louis Goddu and the defendant Albert Van Wagenen, the said Louis Goddu and the said Albert Van Wagenen conspired together and agreed with each other that the said Louis Goddu should invent and design a full line of metallic-fastening machinery for the purpose of performing the work accomplished by the machinery already invented by the said Goddu and belonging to the Association, and it was agreed between the said Louis Goddu and the said Van Wagenen that when the said machines had been invented by the said Louis Goddu the patents therefor should be falsely and fraudulently taken out in the names of the different sons of the said Goddu, so as to attempt to defeat the right of the said Association to the inventions of the said Louis Goddu and prevent the said Association from obtaining patents for the said inventions in the name of the said Louis Goddu to which the said Association was lawfully entitled under its existing agree-

ment with the said Louis Goddu. Your orators further aver that the said plan for having the said Louis Goddu invent and devise the said machines, and then fraudulently cause patents to be taken out therefor in the names of the said sons of the said Louis Goddu, was divulged by the said Van Wagenen and the said Louis Goddu to the said five sons of the said Louis Goddu, namely, the defendants Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, and George Goddu, and it was agreed between the said Van Wagenen and the said Louis Goddu and his said five sons that this plan for defrauding the McKay Company should be put into effect; and in pursuance of this scheme it was agreed between the said Van Wagenen and the said Louis Goddu and his five sons that the said Louis Goddu should continue to receive his pay as inventor for the Association, but that he would invent and develop the new metallic-fastening machines at a small shop belonging to him and located on his house lot next to his house at the said Winchester, where in the past, to suit his convenience, he had been accustomed to carry on much of his inventive work for the Association. It was also agreed that his said five sons should leave the employ of the Association from time to time as they should be needed by their father to assist him — just as they had previously assisted him when in the employ of the Association — in the work, first, of making the wooden patterns for, and then embodying in metal, the new metallic-fastening inventions which he was thus to make. It was further agreed that while these machines were being invented by the said Louis Goddu, and his sons were assisting him in making the wooden patterns and putting together the first machines, he, the said Louis Goddu, would pay his three married sons regular daily wages, and also support his two unmarried sons, and also pay such other sums as might be needed for additional help and for tools and for castings and material, and for taking out the proposed patents, and all other various expenses that might be incurred in connection with the enterprise.

In accordance with this plan, your orators aver that on or about October 1, 1895, the invention of this line of machines was begun by the said Louis Goddu, and in order that he might assist in pro-

moting the enterprise the said Van Wagenen, of his own accord, left the employ of the Association October 1, 1895; and furthermore, that they might assist in making the wooden patterns and doing the other work essential tc the embodiment of their father's new inventions, three of the sons of the defendant Louis Goddu, namely, Napoleon Goddu, Louis H. Goddu, and George Goddu, within a few days of the same time that Van Wagenen left, also voluntarily left the employ of the Association and went to work for their father in his said shop next his house; and also William L. Goff, an employee of the Association who had long been employed by the Association, not as an inventor, but in a confidential capacity to aid the said Louis Goddu to embody his inventive ideas, was persuaded by the said Louis Goddu and the said Van Wagenen to leave the employ of the Association, and accordingly he also, of his own accord, left the employ of the Association and went to work for the said Louis Goddu for daily wages paid by the said Louis Goddu in the said shop next Goddu's house. In 1896 the two remaining sons of the defendant Louis Goddu, namely, William Goddu and Eloie Goddu, also voluntarily left the employ of the Association for the sake of aiding their father, as they had previously done when in the employ of the Association, in embodying his inventions. In this manner the defendant Louis Goddu, with the aid and assistance of Albert Van Wagenen and his five sons, carried out his plan of making a large number of inventions relating to metallic fastenings, and then fraudulently taking out patents for these inventions in the names of his sons, and the work was continued until the said Louis Goddu had invented a complete line of metallic-fastening machinery for doing precisely the same work accomplished by the machines he had previously invented for the Association. In accordance with the original plan of the said Louis Goddu and his five sons and Van Wagenen, patents were fraudulently taken out for the said inventions of the said Louis Goddu in the names of his sons, Louis H. Goddu, William Goddu, and George Goddu.

Your orators aver that some time not long prior to May, 1897, as your orators are informed and believe, the defendant George N.

Smalley was informed of the plan to defraud your orators, and was invited to enter into the scheme, and to help it forward by investing money therein, and the said Smalley, though aware of the contract of the said Louis Goddu with your orator, and well knowing the fraudulent character of the enterprise, nevertheless became a party thereto and took an interest therein, and began to advance money, and in other ways to aid and promote the enterprise.

Your orators further aver that in May, 1897, the defendant Van Wagenen, and the defendants Louis Goddu, Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, George Goddu, and the defendant George N. Smalley, formed or caused to be formed, under the laws of the State of Maine, the defendant corporation, the Goddu Sons Metal Fastening Company, and caused to be issued to the said defendants Van Wagenen, Louis Goddu, Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, George Goddu, and George N. Smalley, stock for their respective interests in the said enterprise.

Your orator avers that since the formation of the said corporation the said Louis Goddu has continued to advance all, or substantially all, the money needed to carry on the enterprise, and is still, with the aid of his five sons and of the defendant Van Wagenen, and of the defendant Smalley, directing and managing the enterprise and supplying the money for carrying it on and making from time to time additional inventions, for which he is fraudulently causing patents to be applied for and taken out by his sons.

And your orators further aver on information and belief that the defendant George N. Smalley is the president of the defendant corporation; that the defendant Albert Van Wagenen is its treasurer; that the defendants George N. Smalley, Albert Van Wagenen, Louis H. Goddu, and George Goddu are directors thereof; and that these said defendants are managers of the defendant corporation, and direct and control the machinery and the methods of manufacture used and employed by the defendant corporation, and direct and control the sale of machines manufactured by the defendant corporation, and that they have authorized and directed the construction, use, and sale of machines which each embody the

inventions shown and described in the aforesaid several Letters Patent, and have thereby infringed the rights of your orators under the aforesaid several Letters Patent.

And your orators further aver on information and belief, that each of the defendants, other than the defendant corporation, is a stockholder in the defendant corporation, and that each of the said defendants is personally interested in the infringements herein complained of, and has actively and personally assisted in the construction of the said infringing machines, and has otherwise actively and personally participated in the said infringements.

And your orators further aver on information and belief that the defendant Louis Goddu is the inventor and designer of the said infringing machines constructed, used, and sold by the said defendant corporation, and has superintended and assisted in the construction of the said infringing machines.

And your orators further aver on information and belief that neither singly nor together are the defendants financially able to indemnify your orators for the loss and damage suffered by your orators on account of the infringements committed by the defendants and herein complained of.

Your orators further aver that the said Louis Goddu and the other defendants, Albert Van Wagenen, Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, George Goddu, and George N. Smalley, who have all well known the contract relations of the defendant Louis Goddu with your orators, and the fraudulent character of his enterprise, and who have constantly consulted with the said Louis Goddu in regard to his plans, and who have been constantly aiding him to carry out his fraudulent scheme, and who have been expecting to profit largely by the enterprise, are all estopped from denying the validity of any of the patents in suit belonging to your orators or issued to your orators as assignees of the said Louis Goddu.

Your orators further aver that the said defendant corporation, the Goddu Sons Metal Fastening Company, was created solely for the purpose of serving as a means to carry out the fraudulent plan hereinbefore set forth, and was formed wholly by these defendants and

by their solicitor, James H. Churchill, who had formerly been employed in the office of the solicitor who took out the patents of the said Louis Goddu for the Association, and who is therefore estopped from denying the validity of any of the patents belonging to your orators, and especially of the patents upon which this suit is brought which were taken out by the said Louis Goddu and assigned by the said Goddu to the Association.

And your orators further pray that said defendants may be compelled, by a decree of this court, to account for and pay over to your orators all such gains and profits as have accrued to or been received by them, and all such gains and profits as they may be entitled to by reason of the aforesaid construction, use, or sale or lease of said metal-fastening machinery and the sale of materials or fastenings sold to be used therein, and all such gains and profits as your orators would have received but for the unlawful acts of the said several defendants, and the damages which your orators have sustained by the said unlawful acts of the said several defendants: and that the said several defendants, their clerks, attorneys, agents, servants, and workmen may be perpetually enjoined and restrained by the decree and injunction of this court from directly or indirectly making, constructing, using, or vending to others to be used, metal-fastening machinery containing or embodying the inventions described and patented in said several Letters Patent or any of them, and that they may be decreed to pay the costs of this suit, and that they may be also enjoined and restrained as aforesaid, during the pendency of this suit, and that your orators may have such other and further relief as the equity of the case may require, and to this court may seem meet.

To the end, therefore, that the said several defendants may, if they can, show cause why your orators should not have the relief hereby prayed, and may full, true, direct, and perfect answer make (but not under oath, which is hereby expressly waived) to the several matters hereinbefore stated and charged, as fully and particularly as if the same were here repeated and the several defendants especially interrogated in reference thereto; and especially that they may set forth whether, since said first day of October, 1895, they

have made, constructed, used, or sold, or are now making, constructing, using, or selling, or causing or permitting to be made, used, or sold, within the district aforesaid or elsewhere in the United States, any metal-fastening machinery containing or embodying the inventions aforesaid, and how many they have so made, constructed, used, or sold, or caused or permitted to be made, used, or sold and whether they claim so to make, construct, use, or sell the said articles, or cause or permit the same to be made, used, or sold under any pretended grant or license held by them or by others under any of said several Letters Patent:

May it please your Honors to grant unto your orators not only writs of injunction conformable to the prayer of this bill, but also a writ or writs of *subpoena ad respondendum* issuing out of and under the seal of this honorable court, directed to the said defendants Louis Goddu, Albert Van Wagenen, Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu, George Goddu, the Goddu Sons Metal Fastening Company, and George N. Smalley, commanding them to appear and make answer to this bill of complaint, and to perform and abide by such order and decree herein as to this court may seem required by the principles of equity and good conscience.

And your orators as in duty bound will ever pray.

JAMES W. BROOKS,
Principal Trustee of
McKay Metallic Fastening Association.

FRANK F. STANLEY,
Associate Trustee of
McKay Metallic Fastening Association.

Fish, Richardson & Storrow,
Solicitors and of Counsel.

AFFIDAVIT OF JAMES W. BROOKS.

James W. Brooks, being duly sworn, doth depose and say as follows: —

I am sixty-five years of age, and live at Petersham in the state of

Massachusetts. I have been one of the trustees of the McKay Metallic Fastening Association since the formation of the Association, June 9, 1877. The Association carries on its business under a declaration of trust dated June 9, 1877. By this trust deed the title to all the property stands in the name of two trustees, one of whom is called the principal trustee and the other the associate trustee. The principal trustee has authority to transact the business of the Association under the direction of an executive committee composed of five shareholders of the Association, and the principal trustee can also, at any time, sign the name of the associate trustee to any assignments of patents, licenses, or other instruments or contracts relating to the business of the Association, When the Association was first formed, on June 9, 1877, Gordon McKay, then of Cambridge, Massachusetts, became the principal trustee, and I was the associate trustee. On July 30, 1884, Gordon McKay resigned as principal trustee, and I took his place as principal trustee, and Frank F. Stanley of Swampscott, Massachusetts, became associate trustee. From that date until the present time, I have continued as principal trustee, having the executive control and management of the business, and Frank F. Stanley has remained as associate trustee.

The McKay Metallic Fastening Association was created chiefly to develop certain inventions and machines of the defendant, Louis Goddu, for inserting screws into the soles of boots and shoes so as to serve as a fastening for holding together the outer sole, the inner sole, and the upper; and also to develop certain tacking machines of Goddu used for driving a fastening to hold the outer sole and inner sole together during the shoe-making process, as a step preparatory to the insertion of the standard screws, or whatever other fastening may be finally employed for attaching the outer sole to the upper and the inner sole. These tacking machines are also used for tacking on the rand or narrow strip of leather which comes between the heel and the sole and serves to level up the somewhat rounded surface of the heel end of the sole, so as to afford a flat surface for the reception of the heel.

Before the formation of the McKay Metallic Fastening Associa-

tion the defendant Louis Goddu had invented a machine for inserting these screws through the outer sole, inner sole, and upper of shoes, and the defendant Albert Van Wagenen had also made some inventions relating to this class of shoe machinery, and these inventions had been transferred by Goddu and by Van Wagenen to a corporation known as the American Cable Screw Wire Company. On June 9, 1877, Gordon McKay as the principal trustee, and I as the associate trustee, of the McKay Metallic Fastening Association, acquired these patents and inventions of the defendants Louis Goddu and Albert Van Wagenen from the American Cable Screw Wire Company, and we also acquired from others certain other patents and inventions relating to metallic fastenings in order that the Metallic Fastening Association might carry on the metallic-fastening business.

The defendant Louis Goddu, besides being the principal inventor of the standard screw machine, and of the tacking machine which the Association took over from the American Cable Screw Wire Company, had made also certain other inventions relating to another metallic-fastening machine called the cable screw machine, and another metallic machine for inserting short nails in the soles of shoes, called a quilter. As Goddu had shown rare genius in inventing these metallic-fastening machines, it was essential to the Association, if it was to carry on the business of perfecting and putting into use these Goddu machines, that Goddu's future inventions in this line should belong to the Association. The trustees, therefore, at the same time that they bought these Goddu patents and inventions from the American Cable Screw Wire Company, also bought from Goddu himself all his future inventions relating to "fastening together the soles and uppers of boots and shoes with metallic fastenings" for the period of seventeen years. This purchase of Goddu's future inventions was effected by a contract entered into by the defendant Louis Goddu and the trustees of the Association on the 9th of June, 1877, and the trustees, as the consideration for these future Goddu inventions, bound the Association to pay to Louis Goddu a sum equal to one and one half per cent of all dividends or profits declared or paid from time to time

by the Association to its shareholders; the payments thus provided for were to continue for so long as any of the Goddu Letters Patent purchased by the Association from the American Cable Screw Wire Company should continue in force, and also for such longer time as the patents for any of Goddu's future inventions thereafter assigned to the Association should remain in force.

Furthermore, as this contract of June 9, 1877, only provided for the assignment of such metallic inventions as Louis Goddu might happen to make, but did not bind him to give his time and services as inventor to the Association, and as the officers of the Association knew that if the Association was to carry on the business of improving and developing Goddu's machines, it must have not merely such future inventions as Goddu might happen to make, but must secure his services as inventor to improve and perfect his machines, therefore, on the 18th day of August, 1877, the Association made an additional contract with Goddu for his services as inventor. In this contract Goddu agreed to work for the trustees —

"in the capacity of inventor and as master mechanic, in constructing such machines as the said Trustees or the Agent of the Association shall require and to use his best endeavors to faithfully, properly, economically and in a good and workmanlike manner, devise and construct said machinery and devise all such machinery and improvements in machinery processes and instrumentalities relating to or in furtherance of the business of said Association, as may be useful or profitable for it, it being understood that 'by an agreement already made said Trustees are to own all such inventions and improvements'."

In order to thus secure Goddu's services as inventor, to perfect his machines, the trustees bound the Association by this contract to pay Goddu four thousand dollars a year, and besides this salary to give him a still further percentage of its dividends, in addition to the one and one half per cent already provided for in the contract of June 9, 1877. This additional percentage was to be one and one quarter per cent of the first seventy-five thousand dollars declared in dividends by the Association, with a varying per cent for such additional sums as might be paid out as dividends in each year.

The plan of business adopted by the Association from the beginning was to lease its patented machines to shoe manufacturers in the United States and Canada, and for the most part to sell them outright in all other countries. In the lease and license agreements covering the machines put out in the United States and Canada, the shoe manufacturers have always agreed to purchase from the Association all screw wire, tacker wire, and other metallic fastenings used in the operation of the machines, and it is expressly provided in these leases that the wire thus purchased from the Association shall be sold at a price considerably above the cost of the wire to the Association. In this way, a royalty or license fee has been obtained by the Association for the use of its patented machinery, and this royalty, inasmuch as it is based directly upon the amount of metallic fastenings driven by the machines, is proportioned exactly to the extent to which any particular machine is used, and at the same time the royalty to different manufacturers is always uniform for any given shoe.

During the first year of the business of the Association there were sold in this way to shoe manufacturers in the United States about 60,000 pounds of screw wire for the Goddu standard screw machine, and more than 200,000 pounds of cable fastening and cable tacker wire for the Goddu cable wire machine and the Goddu tackers. The cable wire machine was used both as a tacker and also for the purpose of permanently uniting soles to uppers, but its use as a machine for driving a permanent fastening was gradually abandoned in favor of the standard screw machine. The sale of standard screw wire increased rapidly, until in 1884 the sale of this wire amounted to nearly 325,000 pounds, and the sale of cable tacker wire amounted to over 100,000 pounds. It is to be noticed that the sale of tacker wire, owing to the substitution of standard screw wire therefor, fell off, but in much less proportion than the increase in the standard screw wire.

Since 1884 the sale of screw wire has more than trebled, so that during the present calendar year the sales of standard screw wire have been at the rate of more 1,000,000 pounds per annum and since 1884 the sale of tacker wire has increased fivefold, so that

sales of tacker wire are now going on at the rate of more than half a million pounds per annum.

In the year 1887 the Association began to put out a new patented machine for driving loose nails. This machine was invented by Goddu as the inventor of the Association, and uses nails supplied in mass to the hopper of the machine, as distinguished from fastenings fed to the machine from a spool or coil. The use of this loose nailer has rapidly increased from sales of 15,000 pounds of nails in 1887 to more than half a million pounds of nails in the year 1897, and the sale of nails has been going on in the present year at the rate of nearly three quarters of a million pounds per annum.

In the year 1896 the Association began to lease to the shoe manufacturers a new patented slugging machine, also invented by Louis Goddu as the inventor of the Association. This slugger uses a continuous wire, and drives a series of metallic slugs or short nails chiefly in the heels of shoes, though occasionally in the soles of some of the coarser shoes. These slugs are intended not for a fastening, but to resist wear, and also for ornament. Goddu had begun to invent his slugging machine about 1889 or 1890. The slugger, however, took Goddu more time than he usually spent on his inventions, and continued to be in the experimental stage until about 1895, although a few of the machines were put out from 1890 on, and the Association sold from 3000 to 7000 pounds of slug wire in each year from 1890 to 1895. By 1896 the machine had been perfected, so the Association began to put out these Goddu slugging machines in large numbers, selling about 33,000 pounds of wire in that year. In 1897 over 214,000 pounds of wire were sold, and in the first nine months of the present year sales have been going on at the rate of nearly 900,000 pounds per annum.

It will thus be seen that the business of the Association was originally founded upon two machines invented and patented by the defendant, Louis Goddu, and that the enormous growth of the business has been based upon these two original machines (the standard screw machine and the tacker) as further developed by the many subsequent inventions which Louis Goddu has made as the inventor of the Association, and also upon the two new machines (the loose

nailer and the slugger) invented and patented by Goddu as the inventor of the Association, and which the Association began to put out in 1887 and 1896, respectively.

The number of these patented machines licensed to shoe manufacturers in the United States and Canada has been steadily and rapidly increasing as the constantly increasing sales of metallic fastenings by the Association indicate, until at the present time the Association has licensed, and in use in the United States and Canada, more than five thousand of these different patented Goddu machines, and the total receipts of the Association from its sale of fastening material and spare parts for these machines are going at the present time at the rate of more than a million dollars per annum.

It should also be stated in this connection that, hand in hand with the numerous inventions made by Louis Goddu in improving and developing these four machines, he also carried on as the inventor of the Association the invention and perfection of a complete line of machinery for producing economically and in large quantities the standard screw wire and the tacker wire or string nail, and also some other fastenings supplied by the Association to its licensees. For example, Goddu first produced a machine for cutting the screw thread on the wire used in the standard screw machines, and more than two hundred of these machines were built by the Association, and kept running to supply the wire sold by the Association to the users of its standard screw machines. Later, in 1884 or 1885, Goddu invented a new and much more effective machine for making this screw-threaded wire by a rolling instead of a cutting process, and machines for doing the work in this way were built and put into use by the Association. Later, in 1887, when Goddu had very much increased the speed and efficiency of the standard screw machines by inventing the double-thread screw wire, Goddu perfected a third set of screw-wire making machinery for the new double-threaded screw wire. Goddu also at different times has produced a number of different machines for making tacker wire.

During all these years, from the formation of the American Cable Screw Wire Company to the formation of the McKay Metallic

Fastening Association in 1877, and thence down to the present time, Louis Goddu has shown, whenever he has felt well disposed, an inventive skill in this peculiar line of machinery which can hardly be called less than marvellous. He has taken out more than sixty patents for metallic-fastening inventions, and there has never been any one else in the world who could compare with Louis Goddu in the fecundity and originality of his inventions in the metallic-fastening field. It has apparently only been necessary for him to get implanted in his mind the desire to invent a machine for doing a particular line of metallic-fastening work in order to conceive the invention or inventions necessary to solve the problem. He certainly has been endowed with a special genius for dealing with wire-manipulating machinery. He is not a man who has received scientific education — he is not even a good draughtsman, as is the case with most inventors. Although the Association has at all times been ready to aid him by permitting him to call upon its expert draughtsmen for assistance, yet he rarely works out his conceptions by the aid of a mechanical drawing. He seems to work out his inventions in his mind in a complete, or nearly complete, form, and the first expression of his conception is in the form of the wooden patterns used for casting or shaping the parts. He is himself a fair pattern maker, and sometimes whittles out these wooden patterns for parts of his machines with his own hands, though generally he avails himself of the services of one or more expert pattern makers for this purpose. These pattern makers work, under his supervision and direction, generally with only an oral description or the merest pencil outline to aid them. Thus the whole new machine is first expressed by Goddu in wood, though I think the machine is never put together by him as a wooden model, for as fast as the wooden patterns are finished they are sent away to be cast or made from metal, and as these pieces of metal are made they are put together, so that the machine is gradually assembled in this way. After the first machine is thus assembled it almost always goes through a period of testing, changing, and experimenting. This experimenting is in part done by Goddu with his own hands, but in much

larger part, as in the case of the first wooden patterns, it is performed by mechanics under his general direction.

While Goddu has been in the employ of the Association he has, whenever engaged in inventing a new or an improved machine, had working under his control and direction in the manner I have indicated one or more pattern makers to first express his conceptions in wood, and also one or more mechanics to serve as experimenters when the new machines are first assembled.

The relations of Louis Goddu to the Association have been attended with much vexation and trouble. He is a French Canadian, and of an excitable and irritable disposition. The Association has always treated him with the greatest consideration, and he has constantly received larger pay than his contract called for, and larger than any inventor I know of, but he has many times expressed the greatest ill-will and animosity towards the trustees and the members of the executive committee. He has a number of times stated that if his pay were only increased to a certain point he would then give himself heart-whole to his inventive work for the Association. The Association has repeatedly met his demands for increased pay in the hope of satisfying him and persuading him to carry on his inventive work, but only to find that in every instance he has before long again become dissatisfied, and again begun to neglect his work and to assume an attitude of hostility towards the trustees and the executive committee of the Association, and particularly to scheme in some way to get from the Association bigger pay.

It will be recognized that no contract, no matter how faithfully observed by the Association, and no matter how faithfully Louis Goddu promised therein to devote himself as inventor to the interests of the Association, can be enforced by the Association so as to compel Goddu to live up to his agreement. The moment Goddu has felt disposed not to invent, the Association has had no legal remedy to compel him to honestly carry out his agreement.

As I have stated, in June, 1877, the Association purchased from Goddu for a percentage of its dividends all of his future metallic-fastening inventions for the period of seventeen years. On August 18 of that same year the Association also entered into an agreement

with Goddu (already referred to on page 3 [printed page of this record 164]) in which Goddu promised —

"to use his best endeavors to faithfully, properly, economically and in a good and workmanlike manner, devise and construct said machinery and devise all such machinery and improvements in machinery processes and instrumentalities relating to, or in furtherance of, the business of said Association, as may be useful or profitable for it."

In return for this promise on the part of Goddu, the Association bound itself to pay him a salary of $4000, and a still further percentage of its earnings, as stated *supra*, page 4 [printed page of this record 164].

However, on January 1, 1880, within less than three years from the date of the purchase by the Association of Goddu's future inventions, and although Goddu was still absolutely bound by his contract to convey to the Association all his inventions relating to metallic fastenings for the further period of fourteen years, yet, in the hope of satisfying Goddu, the Association agreed, by a new contract dated January 1, 1880, to give him a sum equal to two and one-half per cent of all dividends declared by the Association from the profits derived from his inventions in the United States, instead of the one and one-half per cent which had been the sum agreed to by Goddu in his contract of June 9, 1877. The Association also by this new contract of January 1, 1880, bound itself to give Goddu a sum equal to twenty per cent of all dividends derived from his inventions in foreign countries. Goddu, in return for these additional obligations assumed by the Association, sold to the Association all his future inventions relating to metallic fastenings.

Less than three years after this, on May 26, 1883, the Association felt obliged to agree to pay Goddu 5 per cent of the net earnings from the "new automatic nailing machine", although this machine was then built, and, by Goddu's contract of June 9, 1877, would have been absolutely the property of the Association in return for one and one-half per cent of the net earnings of the Association, and was in fact, by Goddu's contract of January 1, 1880, the property of the Association in return for two and one-half per cent of the earnings plus a percentage running from one

and one-half to one-half of one per cent given to Goddu by the contract of August 18, 1877. It was also agreed at this time (May 26, 1883) that Goddu's salary of $4000 per annum should continue, and also that his other percentage already mentioned running from one and one-quarter per cent to one-half of one per cent should still be paid by the Association. Goddu in return for this concession entered into a fresh agreement, in writing, to

"work and do all I can for the interests of the McKay Metallic Fastening Association."

Within only a little more than a year from this time, namely, in July, 1884, when I became, as I have stated, the principal trustee of the Association and assumed its active management, I found that although by the agreement of May 26, 1883, Goddu's salary had been fixed for three years, and the pay he was to receive for his inventions had been raised, yet he had again become dissatisfied and discontented. I knew that the Association was powerless to compel Goddu to carry out his agreement, because if he did not want to invent no court would be able to compel him to do so. I therefore talked the matter over with Goddu, and he assured me that if he could obtain from the Association a sum equal to an all-round 5 per cent of the dividends declared by the Association, in addition to his regular salary of $4000, he would then be fully satisfied with this as his total compensation, and would go to work as the inventor of the Association in good faith and without reserve. Accordingly I decided to meet Goddu's demands, and made an oral agreement with Goddu on behalf of the Association, which fixed the compensation he was to receive from the Association at a sum equal to 5 per cent on the entire dividends of the Association, in addition to his salary of $4000.

In 1889, but a few years after this time, I found that Goddu was once more failing to really devote his inventive skill to the Association, and that he and the defendant Albert Van Wagenen, who had been paid a salary by the Association ever since it started and was still in its employ, had undertaken a scheme to make money for themselves by organizing and starting a corporation named the Goddu Improvement Company. This corporation was

organized by Goddu and Van Wagenen under the laws of Maine with a capital stock of $40,000, Goddu and Van Wagenen holding a majority of the capital stock. Goddu, although he was the inventor of the Association, was at work for this Goddu Improvement Company, developing a machine which he had then invented for making wire nails, and which he had assigned to that Company. Goddu was at this time being paid by the Association a large annual sum, amounting for several years to $14,000 in each year, and in 1889 to $16,500, —

"to work and do all I can for the interests of the McKay Metallic Fastening Association," —

and Van Wagenen was also being paid a salary to work for the interest of the Association, and yet I found they were both very much more interested in having Goddu devote his inventive genius to the perfection of this wire-nail making machine for the Goddu Improvement Company rather than to the machines of the Association. I knew that so long as this state of affairs lasted I could not compel Goddu to keep his mind on the machines of the Association instead of the machines of the Goddu Improvement Company, so I decided to make another effort to persuade Goddu to devote his inventive skill to the Association. Goddu this time by contract dated June 10, 1889, agreed that if the Association would pay him $15,000 in cash for his shares in the Goddu Improvement Company, he would give the Association the exclusive right, not only to his inventions relating to metallic fastenings, but to his future inventions of every kind, and that thereafter he would devote himself exclusively to the affairs of the Association. As part of the same trade, and in order to be sure to get the inventive services of Goddu, I also paid Van Wagenen $15,000 for his stock in the Goddu Improvement Company. For Van Wagenen was the chief originator of the scheme, and he exercised such control over Goddu that I knew Goddu would be influenced by Van Wagenen not to devote himself to the inventive work of the Association so long as Van Wagenen continued to hold such a large interest in another machinery company.

The Association, as part of this fresh trade with Goddu, also

agreed to pay him a sum equal to 14 per cent of all dividends which should be declared from time to time out of profits derived from any invention of his not relating to metallic fastenings, and in case the dividends from these outside inventions amounted to more than $75,000 in any year, then an additional 5 per cent of the excess. And as part of the consideration necessary to buy out Van Wagenen's interest, the Association also bound itself to give Van Wagenen 10 per cent of the dividends declared from these other Goddu inventions. I find that, including this $15,000, the Association paid to Goddu in the year 1899 the sum of $31,500. I ought, perhaps, to add that the Association never obtained any profit or income whatever from the Goddu Improvement Company. The company was purchased because it was felt that the Association was helpless so far as compelling Goddu to live up in good faith to his contract to invent was concerned, and that the only alternative was to pay this additional sum of $30,000 demanded by Goddu and Van Wagenen for the purchase of Goddu's and Van Wagenen's stock in the Goddu Improvement Company, and in this way remove from Goddu the temptation to invent for his Goddu Improvement Company rather than for the Association, and also to remove from Van Wagenen, who to a large extent controlled Goddu, all inducement for urging Goddu to devote himself to the enhancement of Van Wagenen's investment in the Goddu Improvement Company rather than to his inventive work for the Association in accordance with his contract with the Association.

The defendant Albert Van Wagenen had been employed originally, as I have stated, by the American Cable Screw Wire Company. When the Metallic Fastening Association bought the Goddu inventions and also some of Van Wagenen's inventions from the American Cable Screw Wire Company, Van Wagenen was taken into the employ of the Metallic Fastening Association at a salary of $3000 per year. So long as Van Wagenen remained in the employ of the Association he was always given a good deal of latitude, and occupied a confidential position. He was in charge for some years of the advertising, which at first was very important, and upon which the Association spent a great many thousands of dollars.

Later he made it his especial business to keep a close watch on Goddu's inventive work, and also to aid the patent solicitors of the Association in taking out Goddu's patents. I think Goddu rarely, if ever, went to the office of our patent solicitor without being accompanied by Van Wagenen to aid him in explaining his invention and expressing his ideas. In this way Van Wagenen gradually became closely associated with Goddu and intimately acquainted with his inventions. In fact, I think that for many years before Van Wagenen left the employ of the Association he had been on more intimate terms with Goddu than any one else connected with the Association, and at the same time Van Wagenen in his confidential position acquired a complete and extensive knowledge of the patents owned by the Association, and also a knowledge of what forms of mechanism were controlled by the numerous patents of the Association or the patents of others still in force, and what forms of mechanism were free to public use. Van Wagenen continued in the employ of the Association until the friction between the Association and Goddu over the control of the new factory to which I shall refer hereafter, came to a head, and then Goddu and Van Wagenen together, as I believe, formulated a plan for getting up a line of metallic-fastening machinery for the purpose of compelling the McKay Metallic Fastening Association to buy them out in order to avoid a threatened cut in the price of its metallic fastenings and disaster to its business. In any event, Van Wagenen left the employ of the Association October 1, 1895, just as the first three sons of Louis Goddu were voluntarily leaving the employ of the Association to go to work in their father's shop to aid their father as I believe in getting up the infringing machines here in dispute.

About the year 1884, before I became principal trustee of the Association, the defendant Louis Goddu built a small machine and pattern shop immediately adjoining his house at Winchester, and since the completion of this small shop next to his house Goddu has there carried on the chief part of the pattern and experimental work connected with the embodiment of his inventions and the completion of his first machines. It has been the custom of the McKay

Association to permit Goddu to employ in this shop, under his own direction and control, but at the expense of the Association, such pattern makers as he might desire for the purpose of embodying his inventions in the manner I have indicated, and also one or more machinists for the purpose of experimenting with his new machines when they have been assembled.

As the defendants in this suit Louis H. Goddu, William Goddu, Napoleon Goddu, Eloie Goddu and George Goddu, all sons of the defendant Louis Goddu, have grown up from time to time, they have been taken into the employ of the Association, and Goddu, senior, has been permitted to employ them in this shop adjoining his house. Some of his sons have been brought up as pattern makers in order to embody his inventions in the first wooden patterns, in the manner I have described, and others as mechanics to experiment on his first machines after they have been assembled for the first time.

All of his sons have received, I believe, the whole, or substantially the whole, of their mechanical education and experience while in the employ of the Association, and up to the time they left the Association, about three years ago, they had practically never worked for any other company or concern.

Goddu bought, a good many years ago, quite a large tract of land adjoining his house, and somewhat separated from the other houses in Winchester, and as his children have grown up and become married he has built for each of them a house near his own, so that there has been for some years quite a Goddu colony, consisting of four or five houses situated rather by themselves in this part of the town. Three of the married sons and one married daughter thus live in houses built and given them by their father, and adjoining their father's house, while the two unmarried sons and one daughter live with their father in his own house. All five of the sons, up to the time they left the employ of the Association, two or three years ago, were in the pay of the Metallic Association, mainly under the control and direction of their father, and working almost wholly on machinery of his invention. After this experimental shop was built by Goddu next to his house, his sons spent but a small pro-

portion of their time in the factory at Lawrence, where the manufacturing of the Association was carried on until the Association built its new factory at Winchester, and the experimental department was then transferred from Goddu's shop next his house to the factory of the Association, a mile or more from Goddu's house, and the sons were asked to carry on their pattern and experimental work at the factory. This continued only for a very short time, however, for as I shall explain later, almost as soon as the new factory was completed Goddu again became dissatisfied and discontented, this time chiefly because he was not allowed to assume the control of the new factory, or at least to interfere with the authority of the superintendent as the executive head of the shop.

Goddu's oldest son, Louis H. Goddu, who is now thirty-five years of age, began working for the Association, as an experimenter under his father's control, nearly seventeen years ago, and, with the exception of a short time, when he was on the road looking after machines of the Association, he continued to work as a mechanic in the experimental department under his father, and, especially during the seven or eight years prior to October, 1895 (when he left the employ of the Association), he worked steadily in the shop next his father's house as an experimenter to aid his father in embodying his new inventions. During all of this time, although Louis H. was placed under circumstances where he had the best possible opportunity to invent, if he had the inventive capacity, he made no inventions whatever, so far as I know. He knew, as all his brothers knew, that the Association had been paying his father large sums of money annually for many years because of his value as an inventor; but although Louis H. was thus placed where he had the most inviting surroundings and the fullest opportunity, and the strongest pecuniary inducement, to invent, I believe he never, during the seventeen years that he was in the employ of the Association, succeeded in making a single invention, and he never earned from the Association more than mechanic's pay, although the officers of the Association would gladly have raised his wages, as they have that of others, if he had in any way proved himself to be of value as an

inventor instead of merely serving as a mechanic to aid his father as an experimenter.

Louis Goddu's son, the defendant William Goddu, went to work for the Association about 1883, and he also, with the exception of less than a single year, when he was at work in connection with the construction of the new factory of the Association at Winchester, was at work under his father's control and direction in the experimental department as an experimenter on his father's machines. He spent practically all of his time in the experimental shop adjoining his father's house, until the new factory of the Association was completed in the fall of 1894, when the experimental department was moved to the factory, and he went to work at the factory, though only for a short time, because, as I have stated, shortly after the factory was built friction began to develop between the officers of the Association and his father, and then the sons went back again to their father's experimental shop adjoining their father's house, to aid their father, as I believe, in getting up the line of infringing machines here complained of. During all these years Goddu's son William, though surrounded by the same favorable circumstances as his brother Louis H. Goddu, and having the same opportunity and inducement to invent, never, so far I know, succeeded in earning more than mechanic's wages or making any invention.

Goddu's son, the defendant Napoleon Goddu, went to work for the Association, I believe, about 1890, and also began work in this small experimental shop adjoining his father's house, and during the whole, or substantially the whole, of his working career he continued to work in his father's shop as a pattern maker, assisting his father to embody his inventions in wooden patterns in the manner I have described. When the factory of the Association was completed at Winchester in the fall of 1894, he went to work at the factory for a short time, but, as in the case of his brothers, after the friction developed between his father and the Association, he returned to work again in his father's experimental shop in the Goddu settlement for the purpose as I believe of assisting his father, just as he had always assisted him, in getting up the line of machines here in dispute, and thus he continued to work for his father in precisely the

same way, and in exactly the same place, that he had always worked for him. He never, while working for the Association, made any inventions, so far as I know, or showed himself entitled to more than mechanic's pay.

In the same way Goddu's son, the defendant Eloie Goddu, began to work, I believe, for the Association in the experimental shop of his father. He worked as a pattern maker, and was thus employed by the Association to embody his father's ideas in wooden patterns in the manner I have described, and he continued to carry on this work until after the factory of the Association was built at Winchester, when he went to work at the factory for a short time, and then again returned to his father's shop to aid, as I believe, his father in embodying his inventions which form the subject matter of this controversy, just as he had previously aided his father while working in the employ of the Association. Eloie never, so far as I know, made an invention while in the employ of the Association, and never earned or showed in any way that he ought to be paid more than ordinary mechanic's wages while in the employ of the Association.

Goddu's youngest son, the defendant George Goddu, went to work for the Association about 1890, and, as in the case of his brothers, he first went to work for the Association in the experimental shop adjoining his father's house to aid his father as an experimenter on new machines. George Goddu continued to work as an experimenter in this way for the Association under his father's direction until the new factory was built at Winchester, when he went to the factory to work, and worked there for a short time, and then with his brothers returned to work again in his father's experimental shop to aid his father, as I believe, just as he had aided his father before the invention of these infringing machines began. So far as I am aware George never made any inventions while in the employ of the Association, and never earned or showed himself entitled to more than ordinary mechanic's wages.

Prior to the year 1893 the Metallic Fastening Association had always carried on the manufacture of its machinery at the factory of the Stanley Manufacturing Company at Lawrence, Mass.; but in the year 1893, as I have already indicated, the executive com-

mittee of the shareholders decided that the Association ought to build its own factory and assume a more complete control of the manufacture of its machinery. Goddu himself was at this time one of the strongest objectors to the system of carrying on the manufacture of the machinery of the Association in the factory of the Stanley Manufacturing Company, and repeatedly urged upon the members of the executive committee that the Association should build its own factory, and thus more completely control the manufacture of its machinery. Goddu was also desirous that the new factory should be built in his home town of Winchester. In the year 1893 the Association decided to begin the construction of a factory, and in accordance with the wishes of Goddu, Winchester was selected as the place for the factory.

The fear was expressed to Goddu at that time by several members of the executive committee that when the factory was completed Goddu would be tempted to spend his time in trying to run the factory, for which work neither his temperament nor his experience fitted him, and for which task an experienced man could easily be found, instead of devoting himself to inventing, in which field he had shown himself pre-eminently successful, and in which class of work the Association could find no man to take his place if he abandoned or neglected it. But Goddu repeatedly stated to the officers of the Association that he realized that he was better fitted for the work of inventing than of running a factory, and he assured the members of the executive committee that if the factory were built he would not interfere in any way with the management of the factory, or permit the factory to divert his attention from his inventive work.

The factory was built, and the Association, after careful inquiry, selected as its superintendent Mr. S. D. Leland, whom the executive committee after careful inquiry believed to be the best man that could possibly be found for the situation. Mr. Leland, prior to his selection as superintendent for the new factory, was unknown to the officers of the Association, and his appointment was not prejudiced in any way whatever by any personal friendship for him by any officers of the Association. He was appointed simply because,

of the available candidates, he seemed to be the best fitted for the task. He was a mechanical engineer educated at the Worcester Polytechnic Institute, and he had also gained a very considerable shop experience in one of the best machine shops of the country, and he had also acquired experience in the position of superintendent, and he came with the highest commendation from those connected with the Worcester Polytechnic Institute and the shops where he had worked. The executive committee found, however, that no sooner was the factory completed than Goddu began to show a desire, instead of devoting himself to his inventive work, to interfere with the executive management of the shop. Mr. Leland was instructed to treat him with the utmost courtesy and consideration in every way possible, but to retain the actual management and executive control of the shop in his own hands. It was soon found that Goddu became more and more disposed to interfere with Mr. Leland in his management of the men and the control of the shop, and became more and more discontented because Leland, while as I believe always treating him courteously in accordance with his instructions from the Association, at the same time insisted upon retaining the control of the factory and the management of the men in his own hands as the superintendent of the factory. When the factory was constructed, a large, light, and attractive room was built at the top of the building for the express purpose of providing Goddu with an experimental room to which he could always have access, and which should be always under his own control, without interference from any one. The superintendent of the factory rarely visited this room, and no one else except Goddu's own experimenters and pattern makers had authority to do so.

Goddu, however, became more and more dissatisfied with the fact that he was not given more authority in the management of the shop, and by the early part of the year 1895, only a few months after the completion of the factory, he had become very bitter towards the Association and its officers.

I should perhaps here state that the Metallic Fastening Association has brought suit against Louis Goddu and his five sons, and the Goddu Sons Metal Fastening Company, and Albert Van Wage-

nen under the contract which the Association has with Louis Goddu, senior, for his metallic-fastening inventions, and that the Association is asking the court to enjoin the defendants from making, using, selling, or putting out the infringing machinery here in dispute on the ground that the inventions embodied therein are, in fact, the inventions of Louis Goddu, which belong to the Association under his contract with the Association, and are not, as the defendants allege, the inventions of his sons. The hearings in this litigation are now going on from day to day, and some of the facts to which I have already referred, and many of the facts to which I shall refer hereafter in my affidavit, are established by the admissions of Louis Goddu, senior, of Albert Van Wagenen, and of the five Goddu sons who have testified in this litigation.

In the testimony given in this other suit it is admitted by Goddu, senior, and one or more of his sons, that they were dissatisfied with the new shop of the Association, and had some talk together and decided early in 1895 that the sons should leave the employ of the Metallic Fastening Association and go to work getting up a line of competing machinery.

Soon after the time these sons admit in their testimony that they had made up their mind to leave the employ of the Association, and I think early in the spring of 1895, Louis Goddu, senior, came before some of the members of the executive committee of the Metallic Association, including myself, and, after expressing the greatest ill-will towards the Association, said to the members of the executive committee, in substance, "I am through inventing, but I have some boys; they can invent." He also said, "My boys can begin where I have left off". He further stated that he would in no case take directions from me as the managing trustee and agent of the Metallic Fastening Association. He further said during this interview or about this time that he would spend his last dollar, if it was necessary, to injure the Association, and he also stated to me at another interview about this time that he intended to get his "revenge", using, as I clearly remember, the word "revenge."

The members of the executive committee and myself formed at that time the opinion, from Goddu's manner and his statements to us,

that he was at least thinking, if not intending, to try to break his contract with the Association by taking out patents in the names of his sons, and immediately upon Goddu's withdrawal from the room the fact that this was what Goddu had in mind, and what he would probably attempt to do, was spoken of and discussed by the executive committee.

At an interview which took place between myself and the defendant Van Wagenen, the precise date of which I cannot fix, but which took place in the year 1895, and not long after this interview with Goddu, Van Wagenen stated to me in substance, "Goddu can, if he chooses, invent in the name of some one else", although Van Wagenen went on to say, "but Goddu is not that kind of a man". What Van Wagenen said to me made it perfectly clear to me at that time that Goddu and Van Wagenen were considering the possibility of trying to deprive the Association of Goddu's future inventions by applying for patents in the names of his boys instead of in his own name, and I can conceive of no reason why he should have said this to me except that he then wished me to understand it as a threat.

At an interview, which took place before October 1, 1895, Van Wagenen also stated to the executive committee, in substance, that he had worked long enough for the Association, and that he proposed to work for himself, and that the Association would find that their business would be destroyed, or words to this effect, and I remember that he also made the remark that if it were known that Goddu was not with the Association the stock would go "to ten dollars within twenty-four hours", the price of the stock then being in the neighborhood of twenty dollars. Van Wagenen also told the members of the executive committee that he was going to leave the employ of the Association on the 1st of October, 1895.

When the 1st of October came, Van Wagenen voluntarily left the employ of the Association.

A few days before October, 1895, Louis Goddu's youngest son, George, also left the Association of his own accord, and went to work for his father in the shop next his father's house.

Also a few days after the 1st of October, Louis Goddu's oldest son, Louis H., voluntarily left the employ of the Association, and went to work in the experimental shop adjoining his father's house.

In October, 1895, Napoleon Goddu also of his own accord left the employ of the Association and went to work in his father's experimental shop.

In October, 1895, William L. Goff, who had long been in the employ of the Association, and whose work for the Association had been chiefly to assist Louis Goddu, senior, in embodying his inventions, also voluntarily left the employ of the Association and went to work in Louis Goddu's shop adjoining his house.

In April, 1896, William Goddu voluntarily left the employ of the Association and he too went to work in his father's shop.

In December, 1896, the last son, Eloie Goddu, voluntarily left the employ of the Association and also went to work in his father's experimental shop adjoining his father's house.

It has now appeared from the admissions of Louis Goddu, senior, and of his sons, and of Van Wagenen, in the pending litigation to which I have referred, that from the date when the first son left us in the latter part of September, 1895, Louis Goddu, senior, has been present in the same room in his experimental shop adjoining his house where his sons have been working at least a portion of practically every working day from that date down to the present time.

The evidence of Louis Goddu, senior, and the evidence of his sons, and of Van Wagenen also shows that Louis Goddu, senior, besides supplying his shop and the machinery therein for the development of these infringing machines, also bought and paid for with his own money out of his own pocket the necessary materials, including the wood out of which the patterns were made, and the iron out of which the first of these infringing machines were built. Louis Goddu, senior, also paid, prior to the organization of the Goddu Sons Company, and until his death, daily wages to the William L. Goff to whom I have referred. He also paid Louis H. Goddu regular wages at the rate of $2 per day. He also paid his son William $2 per day, and he also paid his son Napoleon $2 per day. His sons Eloie and George, who were unmarried and living with him, but who had been earning wages from the Association, and supporting themselves, Louis Goddu, senior, at first entered

into an agreement to support while these infringing machines were being constructed, and later he paid them regular daily wages as in the case of his other three sons.

It is also admitted by George Goddu and Louis Goddu, senior, in their evidence in the litigation to which I have referred, that Louis Goddu, senior, besides working in the same room, and within speaking distance of his sons, where these machines were being made, also whittled with his own hands at least some of the patterns for these infringing machines.

After the work of inventing and building these infringing machines had been going on for some time in the shop of Goddu, senior, and at the expense of Goddu, senior, and in the presence of Goddu, senior, and, as these defendants have admitted, with at least some direct physical aid in whittling patterns from Goddu, senior, patents for new inventions relating to a standard screw machine, a loose nailer, a slugger, and a tacker were applied for in the names of several of these sons, and these patents have been issued by the Patent Office, and are referred to in the affidavits of Joseph P. Livermore and Franklin O. Tobey, which accompany this motion.

It appears further from the evidence to which I have referred that James H. Churchill, the solicitor employed to take out the majority of these patents, had been formerly employed in the office of the solicitor whom the Association had always employed for the purpose of taking out Goddu's patents. It also appears from this evidence that Louis Goddu himself and Albert Van Wagenen made repeated visits to the office of this solicitor while these applications for patents purporting to be granted for the inventions of the Goddu sons were being prepared, and it will be remembered in this connection that Louis Goddu's custom when taking out patents through our solicitor had been to take Van Wagenen with him, and it is also a significant fact in this connection that Louis Goddu admits by his evidence in this suit that his visits to the office of this solicitor, James H. Churchill, were sometimes made when not in company with any son, and it is also clear from his testimony that these visits which he made without any son did not relate to any other matter except these then pending applications.

This enterprise continued to develop in the shop of Louis Goddu, senior, at the expense of Louis Goddu, senior, and in the presence of Louis Goddu, senior, until finally the first machines were completed and apparantly ready for manufacture. The evidence of Louis Goddu and his sons, and Van Wagenen, shows that there have now been built about a hundred of the infringing tackers at the machine shop of Nutter & Barnes in Boston, Mass., and a lesser number of each of the other machines.

The evidence of Van Wagenen, of Goddu, senior, and of his sons in this other suit also shows that while these machines were being built, Louis Goddu, senior, repeatedly visited the firm of Nutter & Barnes for the sake of instructing that firm in regard to the manufacture of these tackers.

It also appears that Louis Goddu, senior, repeatedly visited some of the foundries where the castings were being made from the wooden patterns for the first of these infringing machines built in the experimental shop next to his house, and that he, in fact, himself was in the habit of carrying the patterns from his shop and delivering them at the foundry, and giving instructions to the foundrymen in regard to the nature or quality of the work which he desired, and that he paid for these castings, as he did other bills, out of his own pocket.

In May, 1897, a corporation with a capital of $500,000 was formed under the laws of Maine, as I believe at the instigation of Goddu, senior, and Van Wagenen and as a part of their plan. The incorporators and directors of this company were the defendant Van Wagenen, the defendants Louis H. Goddu and George Goddu, and the defendant George N. Smalley (who is a personal friend of Van Wagenen), and J. H. Churchill, who has acted as the solicitor in taking out these patents issued for the alleged inventions of the Goddu sons. Albert Van Wagenen became the treasurer of the company and Louis H. Goddu became the president, though Louis H. has since been succeeded as president by George N. Smalley, but the directors have continued to be the same as at the original incorporation.

The evidence in this other suit also shows that, at the time this

Goddu Sons Metal Fastening Company was formed, Goddu, senior, had paid out of his own pocket, (*a*) in wages to his sons, (*b*) for the purchase of material, (*c*) for buying tools, (*d*) for castings, (*e*) for patent soliciting, and (*f*) for building these machines at the machine shop of Nutter & Barnes, and various other expenses relating to the enterprise, substantially $15,000. When the company was formed Goddu took in his own name $30,000 of the par value of the stock, and stock to the par value of $60,000 was given to each of his five sons, and $60,000 at par value of the stock was also given to Van Wagenen. I believe that in fact the greater part of this stock thus issued to his sons belongs to Goddu, senior, though I cannot state this positively, but it has appeared from the testimony in the litigation to which I have referred that the certificate originally issued to Goddu's son Eloie Goddu was sometime after the formation of the company, assigned by Eloie on the back, and by him delivered to his father, who now holds the certificate in his safe, and also that the certificate of at least one other son is locked up in the safe of Goddu, senior. It also appears that the stock standing directly in the name of Goddu, senior, has now increased from $30,000 to about $70,000.

Since the Goddu Sons Metal Fastening Company was formed, some stock in the company has been disposed of, it appearing from the evidence of one or more of these defendants in their evidence given in the litigation to which I have referred, and also from the evidence of these defendants brought out in an interference in the Patent Office between Herbert H. Buffum and the defendant George Goddu, that the daughter of Louis Goddu, senior, has taken or been given by her father a thousand dollars at par value of the stock, paying therefor $500 in cash, and that a son-in-law of Louis Goddu, senior, has also taken or been given by Louis Goddu, senior, some stock, and also that another daughter has taken or been given by her father some stock, and also a granddaughter, and also that the domestic servant in the family of Louis Goddu, senior, has been sold $500 at par value of the stock, paying therefor $250, and furthermore that Joseph H. Taylor, a friend of Louis Goddu, senior, and who had been working under Goddu's direction upon the Goddu

sewing machine to which I refer below, also took or was given some stock, and that some stock has been sold or given to a few other parties, though the amount disposed of to these other parties, and the sums paid therefor, has not yet appeared in the evidence, in the other litigation to which I have referred, because the treasurer, Van Wagenen, has refused to produce the stock book of the company.

Much the greater part of the stock of the company, however, is still held by Goddu, senior, and his sons, and it also appears from the evidence in this pending litigation that whatever money has been needed for the enterprise, and has not been supplied since the company was formed by these sales of the stock, has been advanced from time to time by Goddu, senior; it appears that as late as October 15, 1898, Goddu, senior, made an advance of $2000 towards the expense of carrying on this enterprise, and I have no doubt that since that date Goddu, senior, has made additional advances. The total money paid by Louis Goddu, senior, out of his own pocket up to October 15, 1898, amounted to about $40,000, and since that date I am sure he has advanced additional sums.

I should add, as bearing on this matter, that Louis Goddu is in sound health, and that he has stated in my presence on more than one occasion since this enterprise began that he never felt in better mental condition, or more able in his life to make valuable inventions. These statements have been generally made by him when discussing the sewing-machine matters. Goddu has substantially a third interest in the Goddu Sewing Machine Company, of which the Association owns a little more than half the stock, and during the last eighteen months Goddu, with the consent of the Association, has been under contract to devote his time to the invention of and improvement of a sewing machine and a line of auxiliary machines intended to be used in connection therewith. Goddu has apparently been disposed to give a part of his time to this inventive work for the Sewing Machine Company, because of his large interest in the company, and in this work he has made a number of brilliant inventions showing clearly that his inventive faculties are to-day at their best. I have no doubt whatever that Goddu is at

the present time capable of doing the most valuable and brilliant work for the Association, but as a matter of fact, since January, 1895, he has done practically nothing for the Association.

Louis Goddu, senior, also stated to me, before the final break came and his boys had begun to leave the Association, that he felt he could very much lessen the number of the parts in the machines of the Association without in any way decreasing their efficiency, and he also stated to me then, as an idea which he thought would be of value to the Association, that, besides thus lessening the parts and simplifying the metallic-fastening machinery of the Association, he could design a single base or style of base which would do for all of the machines of the Association, instead of the several bases now used for the machines of the Association, which are different for the different machines.

I annex to my affidavit a pamphlet issued by the defendant corporation, the Goddu Sons Metal Fastening Company, signed by the defendant, Albert Van Wagenen, treasurer. It will be seen that the bases of these infringing Goddu machines have been made all of the same pattern so as to embody the idea which Goddu expressed to me before his final break with the Association, and before the enterprise of building these infringing machines was undertaken. It will also be noticed that the special claim of this catalogue is not so much for the increased efficiency of the machines as that the machines have been simplified, and the number of parts much lessened, as compared with the machinery of the Association, which is the only other machinery of this class in use.

The total amount paid Louis Goddu personally by the Association since he entered its employ is over two hundred and fifty thousand dollars, and besides this the Association, at his request, took into its employ his brother, and also one or two others of his relatives or connections, and paid them all good wages. Moreover, as each one of his five sons grew up, the Association, at their father's request, furnished them all with employment at good wages, and it was only when these sons, at the instigation of their father, and of their own accord, left the employ of the Association that their names ceased to appear on the pay roll of the Association. After the sons thus

left the employ of the Association and went to work in their father's shop for daily wages paid by their father, to aid him in getting up the infringing machines, Goddu, senior, still continued to draw pay from the Association. It is only within a few months of the present time, and only after the Association had obtained conclusive proofs that Goddu, senior, had been for more more than two years using the very money he drew from the Association to carry on in secret in the shop next his house his plan for ruining the Association, that the Association refused to permit Goddu, senior, to draw any more money.

During all the time that the sons of Louis Goddu have been employed by their father in building these infringing machines, — in fact, before the enterprise started, — all the sons knew well that their father had sold his future metallic-fastening inventions to the McKay Metallic Fastening Association, and the defendant Albert Van Wagenen also knew this fact; and I am sure that the defendant George N. Smalley was also informed of this fact before he took any interest in the enterprise, or became an incorporator in the Goddu Sons Metal Fastening Company, and the only remaining director of the company, James H. Churchill, was also well aware of Goddu's contract relations with the Association. The defendant corporation, the Goddu Sons Metal Fastening Company, was formed, as I believe, by the said Louis Goddu and the said Albert Van Wagenen as a mere convenient tool for carrying on the wrongful acts herein complained of. Van Wagenen, two of Louis Goddu's sons, their patent solicitor Churchill, and Van Wagenen's friend George N. Smalley were the original incorporators, and then constituted, and have constituted ever since, the board of directors and all the officers of the company. The said Louis Goddu and the said Albert Van Wagenen have directed every act of the company since the day it was formed. The defendant Louis Goddu has continued as before to supply to the company practically all the money needed to carry on the enterprise, and I believe that no person has taken any stock in the company who has not known of the contract relations between Louis Goddu and the Association, and that the com-

pany was formed for the purpose of aiding Louis Goddu to cheat the McKay Association out of its rights.

As I have stated, I have read the affidavits of Joseph P. Livermore and Franklin O. Tobey accompanying this motion for a preliminary injunction, but I should perhaps add that I believe the affidavits to be strictly true. I do not claim to have knowledge as to those portions of the affidavits which are purely mechanical and technical. No one of the patents upon which these suits are based has ever been infringed, so far as I am aware, by any one prior to the infringement here complained of, but on the contrary they have all been acquiesced in by the public and by rival manufacturers of shoe machinery ever since they were originally issued. There have been several times within the last few years when rival manufacturers have endeavored to put out competing machines, and when they would have been very glad indeed to infringe the patents which these defendants have begun to infringe, but these rival manufacturers have not felt that they could take the inventions of the Association, or infringe the patents here involved, and in consequence these rival manufacturers have been at a serious disadvantage in competing with the Association.

The infringing machines now built and belonging to the Goddu Sons Metal Fastening Company consist of twenty-one screw machines of the kind referred to as the defendants' screw machines in the affidavits of Franklin O. Tobey and Joseph P. Livermore; twenty-five slugging machines of the kind referred to in said affidavits, and eleven loose nailers, and one hundred and one tackers of the kind referred to in the affidavits of Messrs. Tobey and Livermore. The Goddu Sons Company have also on hand the jigs and special tools required to build these machines rapidly in large quantities.

So far, none of these machines have been put out, but the machines have been offered to shoe manufacturers, as appears from the catalogue to which I have already referred, and which is annexed to my affidavit, and as also appears from the copy of a circular which I annex to my affidavit directed to Isaac Prouty & Company, and bearing the name of the "Goddu Sons Metal Fastening Com-

pany, A. Van Wagenen, Treasurer", at the bottom. This circular, offering the machines of the Goddu Sons Company, has been sent, I am informed and believe, to quite a large number of the biggest shoe manufacturers in the country. I have all along felt that Goddu and Van Wagenen were getting up these infringing machines largely for the purpose of threatening the Association, and that very probably when they found their threats did not work, they would not seriously undertake the task of putting out their infringing machines, but I have recently been informed and believe that the defendants Louis Goddu and Albert Van Wagenen have within a few days made up their minds to begin to put out the machines now on hand and to at once manufacture more, and that all of the defendants, acting together, are just on the point of doing this; and I have also been informed and believe that the said Van Wagenen and Louis Goddu intend to offer the metallic fastenings intended for use in their machines, and which will go into immediate and direct competition with our metallic fastenings, at a very large reduction in price from the prices which have been established throughout the United States by the Association for its various fastenings.

The machines of the McKay Metallic Fastening Association put out in the United States and Canada are all owned by the Association. And all the machines thus put by the Association for some years, amounting to much the larger part of the machinery now in use, have been put out without any initial payment whatever from the manufacturer representing the cost of building the machines or the cost to the Association of installing them in the factories. The amount of money which the Association has thus invested in machinery in the hands of shoe manufacturers in the United States is very large indeed, and vital and irreparable injury will be done to the business of the Association if the defendants are permitted to offer their infringing machines to the licensees of the Association, and especially if the defendants, as they are threatening to do, should cut the prices established by the Association for the sale of its fastenings, because it is only by the sale of its fastenings, as I have pointed out, that the Association gets any rental or royalty

for the nearly five thousand machines under lease in the United States, and for which the Association has obtained no initial price to cover the cost of making the machines or the cost of installing them in the factories. Moreover, as the defendants well know, the Association has agreed in its leases that it will charge the same price for its fastenings to every manufacturer, and therefore, if the defendants offer the fastenings intended for use in their machines at a reduction in price, the Association will be obliged, at the very outset, in meeting this cut in price, to suffer enormous loss, because the first cut in the price of its fastening materials made by the Association to a single manufacturer will involve a corresponding reduction to every other licensee of the Association. Furthermore, if such a cut is once made by the Association, as will have to be done to meet the competition of the defendants if they are allowed to manufacture and put out their infringing machinery while this litigation is in progress, it will be practically impossible to afterwards restore the prices if the Association should eventually be successful in this litigation, because long experience has taught the officers of the Association that, while rentals and prices of parts can easily be lowered, they never can be advanced without raising among the manufacturers such a storm of objection and criticism, and causing so much ill-will and bad feeling, as to render the attempt to raise a rental once reduced extremely impolitic and practically impossible.

Affidavit of Franklin O. Tobey.

Franklin O. Tobey, being duly sworn, doth depose and say as follows: —

I am fifty-four years old, and live at Somerville, Massachusetts, and am a machinist by trade. I first began to work as a machinist in 1863 at Worcester, Massachusetts, and continued to work as a machinist in a number of different machine shops until about 1869, when I entered the machine shop of Elmer Townsend on Sudbury street, Boston. Townsend, at that time, was engaged in the business of building and selling wax-thread sewing machines, a pegging machine called the "New Era", and one or two metallic fas-

tening machines. During my first year in Townsend's machine shop I did quite a good deal of work on a new cable-wire tacker which had been invented by Louis Goddu, one of the defendants in these suits, who was then in Townsend's employ. After that I was chiefly occupied for some time as an experimenter to assist Goddu, who was then constantly making inventions and getting up new machines relating to metallic fastenings. When not engaged in helping Goddu I spent my time making special tools for the factory.

Soon after I entered Townsend's employ the American Cable Screw Wire Company was formed, and I continued in the employ of that company until the formation of the McKay Metallic Fastening Association in 1877, and I have been in the employ of that association ever since. I continued doing experimental work under Goddu and making special tools up to the year 1875, when I began to inspect and look after the Goddu machines of the American Cable Screw Wire Company in the different shoe factories, and after I began to work for the McKay Metallic Fastening Association I continued this work of starting and inspecting the Goddu machines put out under lease by the McKay Metallic Fastening Association.

In June and July of this present year 1898, I went to the experimental shop of the defendant Louis Goddu, adjoining his house in Winchester, and spent more than ten days in making a thorough examination of the loose-nail machine, the standard screw machine, the slugger and the string-nail tacker of the Goddu Sons' Metal Fastening Company. The machines were in running order, with power applied, and besides studying them carefully, I saw them operated repeatedly by the different members of the Goddu family, and also operated them myself.

During the ten or more days that I was at this experimental shop belonging to the defendant Louis Goddu, senior, I saw all of the Goddu boys,— Louis H. Goddu, Napoleon Goddu, Eloie Goddu, William Goddu, and George Goddu. They were at work assembling loose nailers, and also constructing machines for making standard screw wire, and doing other work preparatory to putting

these loose nailers, standard screw machines, tackers, and sluggers on the market. I also repeateedly saw Louis Goddu, senior, in the shop, meeting him there every day, or every day but one. The shop immediately adjoins his house, being distant not more than forty feet. The basement floor of the shop has no shafting or machinery, and is used as a store room, and no work is done there. There is a little blacksmith's forge at the back of the shop where hardening parts or other small forging can be done. All the work, except the little forging required from time to time, is carried on in a single room about forty feet by eighteen or twenty feet, which occupies the floor above the basement. The room is fitted up with work benches and shafting, and in this room are all the special tools and machines used in whatever work may be going on. A little gasoline engine placed at one end of the shop supplies the power for the machinery in this room. No work is done on the third or top floor, as it has no power or machinery or shafting, but is used as a place to store special tools, jigs, patterns, parts, and other things of that sort. There is also a small room which leads out of the machinery room which was apparently originally intended to be an office. It has no machinery, tools, or work benches, but has several desks and tables, and is now chiefly used as a store room. All the work done in the shop by any one, except such work as may be done occasionally at the little blacksmith's forge, is carried on within plain sight and within speaking distance, because the work room is entirely open without any dividing partitions, and, as I have stated, is only forty by eighteen or twenty feet.

There has been prepared, with my assistance, a set of drawings illustrating the loose nailer, the standard screw machine, the slugger and the string nail tacker of the Goddu Sons' Metal Fastening Company which I saw and examined, as I have stated, at this experimental shop adjoining the house of Louis Goddu, senior. I have written my initials on each of these drawings, and I will now refer to them in detail, taking up first the drawings relating to the loose nailer.

Defendants' Loose Nailer.

The drawing marked "Defendants' Loose Nailer" is a general

representation of the loose nailer of the Goddu Sons' Metal Fastening Company which I saw and examined at Louis Goddu's shop adjoining his house. I will, hereafter, for the sake of brevity, call this loose nailer the "Defendants' Loose Nailer". This drawing is made to show the machine from the right-hand side, and is an accurate representation of the machine except for the slight, and, so far as the operation or mode of operation of the machine is concerned, immaterial difference that the gear or teeth for revolving the nail pot *c*-17 are indicated in this drawing near the middle of the pot, while in the machine I saw at Winchester they were placed near the top of the pot.

The drawing marked "Defendants' Loose Nailer Awl Stroke Controlling Mechanism" is a detail drawing of the mechanisms used in the defendants' loose nailer for regulating the stroke of the awl according to the position of the horn, the position of the horn depending upon the thickness of the stock against which it is pressed.

The drawing "Defendants' Loose Nailer Detail Awl Actuating Mechanism" is an accurate representation of the mechanism used in the defendants' loose nailer for actuating the awl bar. The drawings "Defendants' Loose Nailer, Horn Depressing Mechanism" show in detail the mechanism employed in the defendants' loose nailer for depressing the horn to allow the work to be fed after each nail is driven.

The drawing "Defendants' Loose Nailer, Nail Feeding Mechanism" shows the roadway for the nails and the striker or clearer which in the operation of the machine is reciprocated to free the roadway from such nails as may be improperly lodged in it.

The drawing "Defendants' Clutch Mechanism" is a good representation of the clutch and brake mechanism used on the defendants' loose nailer. There is in the machine a suitable spring for depressing the end of the lever *d*-9 which carries the brake *d*-8 in order to apply the brake when the lever *d*-3 is allowed to drop.

I also carefully compared the loose nailer of the Goddu Sons' Metal Fastening Company, which I saw in Louis Goddu, senior's, experimental shop at Winchester, with the drawings and with the

description of United States Patent No. 583,044, issued to George Goddu of Winchester, Massachusetts, May 25, 1897. I found that this patent accurately represented and described the defendants' loose nailer except as to some few points in construction which do not affect the general character of the machine. In the defendants' loose nailer which I saw at Winchester instead of the slot shown in the drawings of the patent in the end of arm a^{33} of the awl-actuating mechanism, in which is fitted the block a^{35}, pivoted on the awl bar a^{36}, there has been substituted in the present defendants' loose nailer, a rack on the side of the awl bar, shown as a^{35a} in the drawing "Defendants' Loose Nailer Detail Awl Actuating Mechanism", with which engages a toothed sector on the arm a^{33}, shown in the said drawing as a^{34a}.

Again, in the horn-depressing mechanism, instead of longitudinal serrations on the end of lever a^{53}, as shown in the patent, with which co-operates a dog, a^{47}, which has corresponding longitudinal serrations, I found that in the defendants' loose nailer the end of the lever a^{53} was serrated transversely, and for the dog a^{47} there had been substituted a pawl adapted to engage the teeth formed by the transverse serrations on the end of lever a^{53}.

The lever which carries the pawl, corresponding to the lever shown in the patent as a^{42}, instead of being under the main shaft a^{23}, as shown in the patent, has in the defendants' loose nailer been carried over said shaft. This change from the construction of the patent is illustrated in drawing "Defendants' Loose Nailer, Horn Depressing Mechanism", where the pawl-carrying lever is shown as a^{42a}. This drawing also shows the transverse serrations on the end of lever a^{53} and the pawl-carrying lever a^{42a} carrying the pawl a^{47a}, adapted to engage the teeth on the end of lever a^{53}.

As I have stated before, there is no "clearer" or "striker" shown in the drawings of patent No. 583,044. There was, however, such a "striker" on the defendants' loose nailer which I examined at Louis Goddu's experimental shop, and this "striker" is shown in drawing "Defendants' Loose Nailer, Nail Feeding Mechanism".

I should also add that the gear on the revolving hopper, instead

of being around the middle portion of the conical-shaped hopper as shown in the drawings of patent No. 583,044, is, in the defendants' machine, around the upper end or base of the conical hopper. Of course there is a corresponding change in the pinion which engages this gear, and through it rotates the hopper.

In the defendants' loose nailer the feed bar c^{80} is given a reciprocating motion from right to left as one faces the machine. In the patent it is stated that this feed lever is given what is known as the four-motion feed, that is, in addition to the back-and-forth motion from right to left, it is shown as having additional movements toward and from the work. The effect of this change from the construction of the patent made slight modifications necessary in the feed-operating lever and cam.

Some other slight changes have been made in the defendants' loose nailer from the construction shown in the patent. Thus, the lever a^{42}, which operates to move the edge gauge toward or from the work is placed on the right side of the defendants' nailer instead of on the left, as shown in the patent. Also the spring a^{76}, which operates to move the vibrating head against the action of the cam a^{77} has been placed on the lower right-hand side of the vibrating head (viewing the front of the machine) instead of on the upper left hand, as shown in the drawings of the patent.

Except such changes as I have indicated above, the loose nailer of the Goddu Sons' Metal Fastening Company, which I examined at the shop of Louis Goddu, is, I believe, accurately represented by the drawings of said patent No. 583,044, and is built in accordance with the specification of that patent.

Defendants' Screw Machine.

Taking up next the standard screw machine of the Goddu Sons' Metal Fastening Company, which I saw at the experimental shop of Louis Goddu, senior, and which I will hereafter call defendants' screw machine, the drawing marked "Defendants' Screw Machine Wire Feed Mechanism" is an accurate representation of the mechanism employed in the defendants' machine for feeding the wire and for varying the amount of wire fed, according to the thickness of the stock, by means of connections between the feeding sleeve

and the horn. This drawing also shows the device used on defendants' screw machine for stopping the feeding of the wire, consisting of the arm h, carrying a latch plate, h^4, which is adapted to be swung under the lug or block h^5 on the sleeve-actuating lever b^1 when the sleeve is at its lowest point, to hold the sleeve at its lowest position against the action of the spring b^5.

This drawing, "Defendants' Screw Machine Wire Feed Mechanism", also shows the enlarged lower end of the spindle of the defendants' screw-thread machine with the enclosed feed rolls.

The horn-depressing mechanism on the defendants' screw machine is substantially the same as the mechanism illustrated in the drawing "Defendants' Loose Nailer Horn Depressing Mechanism", except that the lever which carries the pawl (shown as a-580 in said drawing) goes under the main shaft a-23 instead of over it.

I also compared the defendants' screw machine with the drawings and description of United States Letters Patent No. 583,045, issued to Louis H. Goddu May 25, 1897, and found that there was no substantial difference between the defendants' screw machine and the screw machine shown and described in that patent. In fact, except for some slight changes in the forms of some of the springs, the defendants' machine is, I think, built strictly in accordance with this patent No. 583,045.

Defendants' Slugger.

The feed roll and wire passage in the slugging machine of the Goddu Sons' Metal Fastening Company which I examined at Winchester are accurately illustrated in the drawing marked "Defendants' Slugging Machine." As shown in that drawing, the wire passage is formed entirely in the block a-16, which is secured by a bolt to the lever which carries the feed roll.

The clutch and brake mechanism which was on the defendants' slugging machine which I saw at Winchester is substantially the same as the corresponding mechanism on the loose nailer, and is well represented in drawing "Defendants' Clutch Mechanism".

I also carefully compared the defendants' slugging machine with the slugging machine shown and described in the United States Letters Patent No. 583,046, issued to the defendant Louis H.

Goddu May 25, 1897, and entitled "An Invention relating to Nailing Machines", but referred to in the specifications as a "nailing machine adapted for the insertion of nails or slugs".

As I remember, the clutch mechanism on the machine differed somewhat from the clutch mechanism shown in the patent on the machine No. 583,046. In the machine of the patent, the pin or rod *e* (see fig. 2 of patent) was not attached to the yoke *d'*, but merely rested upon it. As I remember the machine, this lever, shown as *e* in the patent, was securely attached to the yoke as shown in the drawing "Defendants' Clutch Mechanism", where the lever shown as *e* in the patent is marked *d*-21, and the wedge is shown as *d*.

The patent on this machine No. 583,046 shows an edge feed having a four-motion feed similar to that already described as shown in the loose nailer patent. The machine which I saw, however, had only a two-motion feed like the loose nailer which I saw, and, as in the case of the loose nailer, there were some changes, in the levers and in the cam which operate the feed bar, from the construction shown in the patent.

Except for these few changes, there is, so far as I was able to discover, no change in the slugging machine which I saw at Winchester from the machine shown and described in patent No. 583,046.

Defendants' Tacker.

The string-nail tacker of the Goddu Sons' Metal Fastening Company which I saw at the shop of Louis Goddu, senior, at Winchester is built substantially in accordance with patent No. 584,735 to William Goddu, dated June 15, 1897. In examining the machine, I noticed no deviation from the construction shown and described in that patent.

The work-supporting device of this string-nail tacker of the defendants which I examined at Winchester is accurately shown in the drawing "Defendants' String Nailer."

I have been asked to state to what extent the inventions pointed out by the several claims of the different patents here in suit, and which Mr. Livermore says in his affidavit are infringed by the

defendants, have been used by the McKay Metallic Fastening Association and its licensees.

The awl-actuating mechanism described in claim 1 of patent to Louis Goddu, No. 383,455, dated May 29, 1888 (which Mr. Livermore says is used in the defendants' loose nailer), has been used by the McKay Metallic Fastening Association in its loose nailers ever since that invention was made by Louis Goddu, now more than ten years ago, and the Association has in use to-day in the United States alone, in about 510 different factories, more than 780 of these loose nailers embodying the invention pointed out by this first claim of this patent. The Association has also used the awl-actuating mechanism of this first claim in all of its slugging machines, this construction having been first embodied by Louis Goddu in the slugging machine of the Association in 1894. There are to-day in use in the shoe factories of the United States about 660 of these slugging machines embodying this invention put out by the Association in about 367 different shoe factories. The mechanism pointed out in this claim for actuating the awl bar is much more practical and satisfactory than any other mechanism that has ever been invented for this purpose, so far as I have ever seen or known.

The horn-depressing mechanism referred to in claims 17 and 18 of the Louis Goddu patent in suit No. 265,227, dated September 26, 1882 (which Mr. Livermore says has been embodied in the defendants' loose nailer and the defendants' standard screw machine), has been used by the Metallic Association in its loose nailers ever since the mechanism pointed out by these claims was invented by Louis Goddu. It was first applied to the loose nailer some sixteen years ago, and has been in constant use in that machine ever since, there being, as I have stated, some 780 of these machines under lease in about 510 different shoe factories in the United States alone. This same horn-depressing mechanism pointed out by these claims 17 and 18 has also been applied to the rapid standard screw machine of the Association, and the Association now has 500 rapid standard machines under lease in about 294 different factories. The mechanism of these claims 17 and 18 was also applied by Louis Goddu, senior, to the old standard screw machines of the Association, though

in the case of the old standard screw machine there was a simple reversal of the motion, so that the head moved instead of the horn. This horn-depressing mechanism described in this Goddu patent, and pointed out by these claims 17 and 18, has proved entirely satisfactory for depressing the horn to allow the work to be fed, and it is the only mechanism which has ever been successfully used by any one, so far as I know, for this purpose.

The nail-feeding improvement pointed out by claim 3 of the Louis Goddu patent No. 265,227, was, so far as I know, the first device that ever went into practical use on a loose-nailing machine to throw off from the roadway nails improperly lodged in the roadway. This invention has been used in the loose nailers of the Metallic Association ever since the date of this patent, some sixteen years ago. There have been from time to time changes made by the Association in the specific form in which this invention has been applied to its loose nailer, but in one or another of these forms it has been in continuous use by the Association for upwards of sixteen years, and is now in use on more than 780 loose nailers of the Association under lease in shoe factories all over the United States.

As regards the mechanism of claim 1 of the patent in suit to Hopkins, No. 289,103, which consists of a reciprocating clearer in combination with a stationary roadway, the Association does not use this form of construction, because in the loose nailers of the Association the *raceway* is reciprocated instead of the clearer, so that the Association has used for its loose nailer a somewhat different construction covered by another one of its patents instead of the construction set forth in its Hopkins patent.

Taking up now the clinching mechanism described in claims 1, 2, 3, 5 and 6 of the Dunham patent No. 356,107, dated January 18, 1887, the construction referred to in these claims has been embodied in all the loose nailers put out by the Association since it first began to build and lease loose nailers in the year 1882. This Dunham invention — for which the application was pending in 1882, when the Association put out its first loose nailers — did not at that time belong to the McKay Metallic Fastening Association, but the Association soon found that it could not get along

without the use of the Dunham invention, and in 1887 the Association bought out the company controlling this patent, paying therefor a very large sum. The sum paid, which amounted to $125,000, was not paid wholly on account of this patent, but the patent was a large factor in determining this price, as the Association considered that in order to have a successful loose nailer it must use this Dunham invention. It is absolutely essential to a successful loose nailer that the nails, which are all of one length, but which are driven into leather of varying thicknesses, should be clinched on the inside of the shoe, and these Dunham claims cover the only practical mechanism, so far as I am aware, for properly clinching a nail.

The invention pointed out by claims 7 and 8 of the Louis Goddu patent No. 383,455 (which invention Mr. Livermore says is embodied in the defendants' loose nailer and the defendants' string-nail tacker and in the defendants' slugger) have been used by the Association in all loose nailers built by the Association since the invention pointed out by these claims was made by Louis Goddu, and to-day it is in use on every loose nailer of the Association under lease in the United States, amounting, as I have stated, to more than 780 loose nailers under lease in about 510 different factories distributed all over the United States. This invention pointed out by these claims 7 and 8 has also been embodied in the slugging machines of the Association which, as I have stated, are out under lease in large numbers in many shoe factories in different parts of the United States.

The invention pointed out by claim 7 of the Louis Goddu patent No. 385,802, which is an improvement upon the construction to which I have just referred as being pointed out by claims 7 and 8 of the prior Goddu patent 383,455, has also been embodied by the Association in all of its loose nailers and all of its slugging machines, so that it has been in use by the Association for a period of about ten years, and has now been applied to more than 780 loose nailers and 660 sluggers of the Association out under lease in the United States.

The wire-feed mechanism for the standard screw machine re-

ferred to in claims 10, 11 and 12 of Louis Goddu patent 403,835 (and which Mr. Livermore says has been put into the defendants' screw machine) has been used on the rapid standard screw machine of the Metallic Fastening Association ever since that machine was first put out by the Association in 1888 or 1889, and is in use to-day on all the rapid standard screw machines of the Association in more than 290 different factories in the United States. In the old standard screw machines of the Association manufactured prior to 1888 or 1889, the Association had employed a feed sleeve which was actuated by a lever connected to only one side of a collar surrounding the feed sleeve, and on account of the friction and binding between the sleeve and the collar which actuated it the speed of the machine was limited so that it was possible to insert only 100 screws a minute. After the adoption of the double-threaded wire with steeper pitch and the substitution of the yoke construction pointed out by these three claims for actuating the feed sleeve, instead of the old construction previously used, the machine was able to insert 240 screws a minute instead of 100. A large proportion of this increased speed was due directly to the adoption of this mechanism of claims 10, 11 and 12 of the patent in suit, 403,835. Claim 26 of this patent in suit 403,835 (which Mr. Livermore says is also infringed by the defendants' screw machine), covers the enlarged lower end of the spindle having the feed wheels and gears to drive them entirely enclosed within it. So far as I can see the defendants can only obtain a high speed for their machine by either adopting this construction pointed out by claim 26 of this Goddu patent in suit belonging to the Association, or else by adopting the construction set forth in the Goddu patent 490,622, also belonging to the Association. The defendants apparently have chosen the former of these two patented constructions belonging to the Association, and the Association in its own machines has used the latter of its two patented constructions.

The mechanism for stopping the feed of the screw wire set forth in claim 18 of the Louis Goddu patent in suit 403,835 (which Mr. Livermore in his affidavit says has been embodied by the defendants in their screw machine) has been in use by the Association in all of

its standard screw machines ever since the patent was taken out some ten years ago. In the standard screw machine of the Metallic Association the feed of the screw wire is produced by the up-and-down movement of the feed sleeve on the spindle, and this sleeve is operated by a lever which is moved positively downward to feed the wire and is moved upward by a spring. In order to stop the feed of the wire it is only necessary to interpose an obstruction to arrest the upward movement of the feed sleeve, and the mechanism referred to in this eighteenth claim of the Goddu patent in suit, 403,835, for accomplishing this result, consists of a pivoted lever or block which is adapted to be swung in and out of the path of movement of a lug on the lever which actuates the feed sleeve. This stopping mechanism of this eighteenth claim was at once applied, as I have said, to the rapid standard screw machine of the Metallic Association, and has been used in that machine ever since. It is by far the most efficient and most satisfactory device for this purpose which has ever been used on the standard screw machine of the Association.

The wire guideway referred to in claim 4 of patent to Louis Goddu, No. 563,478, dated July 7, 1896 (which Mr. Livermore says is embodied in the defendants' slugger), has been used on the slugging machines of the Association ever since that machine began to be put out in 1894 or 1895, so that it is in use here to-day on about 660 slugging machines leased by the Association to more than 360 shoe manufacturers distributed over all parts of the United States.

Affidavit of Joseph P. Livermore.

Joseph P. Livermore, being duly sworn, deposes and says as follows: —

I am forty-three years old; reside at Cambridge, Mass., and am a solicitor of patents and mechanical expert. I am a graduate of Harvard College, and of the Lawrence Scientific School, where I received the degree of civil engineer. For the past ten years or more I have been occupied as a mechanical expert, frequently testifying in patent cases, and making examinations and reports as to

the nature and scope of patented inventions. I have also been practising as a solicitor of patents since 1879, and in my work as patent solicitor and expert have been constantly employed in examining machinery and apparatus of various kinds, and descriptions and drawings thereof, and in making comparisons as to substantial resemblances and differences in the construction and mode of operation of the contrivances therein embodied or represented.

I have examined the drawing marked "Defendants' Loose Nailer" and identified by F. O. Tobey, which is a side elevation of the machine shown in patent to George Goddu, No. 583,044, dated May 25, 1897, with the exception of certain details or modifications which I will hereinafter describe, and I have also examined the drawings marked "Defendants' Loose Nailer Awl Stroke Controlling Mechanism", "Defendants' Loose Nailer Detail Awl Actuating Mechanism," "Defendants' Loose Nailer Horn Depressing Mechanism", "Defendants' Loose Nailer Nail Feeding Mechanism", "Defendants' Clutch Mechanism", for the purpose of ascertaining whether not in my opinion a machine constructed and operated like the machine shown and described in said drawing and said patent, which machine I will hereafter call "Defendants' Loose Nailer", embodies inventions forming the subject of claims in Letters Patent No. 383,455, dated May 29, 1888, to Louis Goddu, assignor to James W. Brooks, trustee; Letters Patent No. 265,227, dated September 26, 1882, to Louis Goddu; Letters Patent No. 493,910, dated March 21, 1893, to Cummings & Coupal, assignors to Stephen Moore, trustee; Letters Patent No. 356,107, dated January 18, 1887, to Henry Dunham, Ella B. Dunham, administratrix, assignor to Henry S. Jenkins, trustee; Letters Patent No. 385,802, dated July 10, 1888, to Louis Goddu; and Letters Patent No. 289,-103, dated November 27, 1883, to William P. Hopkins, assignor to Gordon McKay and James W. Brooks, trustee.

Loose Nailer.

The machine shown in said drawing, and shown and described in said patent to George Goddu, No. 583,044, is a nailing machine of the kind commonly employed for driving nails into the soles of boots and shoes for the purpose of fastening together the outsole,

upper, and insole of which the shoe is made. The machine is of the class commonly known as loose nailers, being one in which separate nails are supplied in mass, and are driven, one at a time, into the leather, as distinguished from those in which each nail or fastening is cut or separated from a wire or strip of indefinite length by the machine before or after being driven. The main working elements of the machine comprise a horn or work support adapted to extend up inside of the boot or shoe so as to afford a support for the insole directly under the point at which the nail is to be driven; a nose or guideway having a throat or passage through which the nail is driven into the leather; an awl which passes through the said throat and punctures the leather so as to make it easier for the nail to penetrate; a driver bar which works in the throat after the awl has been withdrawn therefrom, to drive the nail which has been introduced into said throat or guideway below the driver after the awl has been withdrawn; and feed mechanism which advances the material between successive driving operations so that the consecutive nails are driven at regular distances from one another around the edge of the sole, or along whatever path may be required for the line of fastenings in the finished work.

The nose containing the throat or guide passage through which the awl and nail driver operate is rigidly supported upon the framework of the machine directly over the upper end of the horn, and the latter has an up-and-down movement with relation to said nose, so that it can be withdrawn therefrom to permit a boot or shoe to be placed thereon, and so that it may rise to the proper height to clamp the leather or material between the upper end of the horn and the lower end of the nose, whatever may be the thickness of the said material. The horn is normally pressed upward by a spring (*b*-23, fig. 5 of the patent) so as to firmly clamp the material, and afford a solid wall or support for the material to resist the pressure of the awl and nail in penetrating it. In order that the feed of the material may take place between the successive nail-driving operations, the horn is depressed at the proper time so as to relax the clamping hold upon the material which it maintained during the nail-driving operation, in which operation is included

the penetration of the awl as well as the driving of the nail into the awl hole after the awl is withdrawn. It is obvious that the horn must stand at different heights with relation to the nose when the material is clamped, as the material varies widely in thickness in different parts of a given boot or shoe, as well as in the different boots or shoes which are operated upon in the use of the machine, and consequently the horn must be depressed, to provide for each feed operation, from whatever height it may be standing at the time when the given feed operation is to take place.

The nails, in a confused mass, are contained in a hopper or receptacle somewhat remote from the nose or throat through which each nail is driven into the material, and from said hopper there is an inclined chute or roadway leading to the throat, and means are provided for operating upon the confused mass of nails so that they are continually being deposited in the upper part of the roadway, which thus becomes filled, and contains a single row or column of nails resting one against the next, and all standing head up and point down, and tending to descend by gravity from the upper end of the roadway at the hopper to the lower end at the throat through which each nail is to be driven. The column of nails is arrested at the lower end of the guideway by a separator, which at the proper time is withdrawn and permits the lowermost nail to pass into the throat under the driver and then enters between said lowermost nail and the one next to it so as to hold back the remainder of the column while the nail thus separated therefrom is being driven, and until the proper time for the next nail to be supplied to the throat.

I will now describe more in detail certain of the above-named elements and the mechanism by which they are operated, and compare the same with the corresponding elements and mechanism forming the subject of certain prior patents which will be considered in connection therewith; and first I will take the awl and its actuating mechanism.

Awl, and Actuating Mechanism Therefor.

The awl is shown at *a* in the drawings of the George Goddu patent No. 583,044, and it is moved up and down to cause it to pene-

trate and be withdrawn from the material by a mechanism best shown in fig. 1 of said patent, comprising a lever, *a*-30, pivoted at *a*-32 and actuated by a cam, *a*-37, on the main driving-shaft *a*-23 of the machine, which shaft operates all the working elements of the machine at the proper time in relation to each other, performing a complete cycle of operations necessary for driving one nail and feeding the material to receive the next at each single rotation of said main shaft. As shown in the drawings of said patent, one arm, *a*-33, of the said lever *a*-30 is provided with a fork or slot, *a*-34, engaging a pivoted block, *a*-35, connected to one side of the awl-carrying bar *a*-2. I am requested, however, to consider a machine having substituted for this connection between the lever *a*-30 and the awl bar *a*-2 a connection such as shown in the drawing marked "Defendants' Loose Nailer", and also in the detail drawings marked "Defendants' Loose Nailer Awl Stroke Controlling Mechanism" and "Defendants' Loose Nailer Detail Awl Actuating Mechanism".

As shown in these drawings, the awl-actuating lever *a*-30 has a segmental gear, or curved toothed end, *a*-340, and the awl bar *a*-2 has a toothed portion or rack, *a*-350, meshing with the toothed end *a*-340, so that as the lever *a*-30 is vibrated on its pivot or fulcrum *a*-32 by the action of the cam *a*-37 on a cam roll, *a*-38, connected with the other arm *a*-39 of said lever, the said awl bar is moved up or down, the downward movement being effected by a stout spring, *a*-40, and the upward movement being positively produced by the cam.

The extent of vibration of the awl-actuating lever *a*-30 is not uniform at all times, but is automatically governed so as to give a varying awl stroke proportionate to the thickness of the material at the point to be penetrated. It is desirable that the awl should not fully penetrate the material, but should leave a portion below the point to be penetrated by the nail, so that the end of the nail will take firmer hold than it would if merely passed through a hole prepared for it by the awl. It is furthermore desirable that the thickness that is left by the awl to be penetrated by the nail should be substantially the same at all times, or, in other words, that the awl should always

penetrate to within a certain definite distance from the lower surface of the material being penetrated. If, therefore, for example, it is to enter to within $\frac{1}{8}$ of an inch of the lower surface, so as to leave a thickness of $\frac{1}{8}$ of an inch to be penetrated by the nail, the awl should enter to a depth of $\frac{1}{8}$ of an inch only, in material that is $\frac{1}{4}$ of an inch thick, but should enter to a depth of $\frac{1}{4}$ of an inch in material that is $\frac{3}{8}$ of an inch thick, and to a depth of $\frac{3}{8}$ of an inch in material that is $\frac{1}{2}$ an inch thick, and so on. This result is automatically accomplished by regulating the extent of the down stroke of the awl bar in accordance with the position of the horn, by connections from the horn to the awl-actuating mechanism, the result being that the awl always penetrates to within a certain definite distance from the end of the horn, whatever may be the position at which the horn stands at the time when the awl operates. In the specific construction shown in the drawings above referred to and in the George Goddu patent No. 583,044 this result is attained by a variable stop, *a*-51 (see fig. 1 of the patent), which arrests and thus determines the limit of movement of the awl-actuating lever and of the awl bar actuated thereby. The said stop is automatically shifted to arrest the movement of the awl bar at a higher or lower point according as the horn stands at a higher or lower point by connections from said stop to the horn, which are shown in drawing "Defendants' Loose Nailer Awl Stroke Controlling Mechanism", and are as follows: —

The stop *a*-51 is carried by a lever, *a*-53, pivoted at *a*-54 (see fig. 16 of the patent), and connected by a link, *b*-19, with one arm of a lever, *b*-6 (see fig. 5). The other arm of the lever *b*-6 is connected by rod *b*-13 with the horn post *b*-3 and horn *b*. This depression of the horn raises the stop *a*-51, or moves it further away from the coacting part *a*-50 on the awl-operating lever, giving a longer stroke to the awl, while the rising of the horn to a higher position lowers the stop *a*-51, bringing it nearer to the part *a*-50, and thus causing the awl to be arrested at a higher point.

I am of opinion that the appliances above described for automatically varying the depth of penetration of the awl in accordance with the thickness of the material, by mechanism connected with the horn and governed by the changes of position of the horn, embody

substantially the invention shown and described in patent to Cummings & Coupal, No. 493,910, and referred to in claim 2 thereof, which is as follows: —

"2. In a machine for driving metallic fastenings, the combination of a vertically movable work-supporting horn having an upward yielding movement, a perforating awl located over the horn, awl-operating mechanism substantially as described adapted to impart a varying depth of movement to the awl, and connections between said awl operating mechanism and the horn whereby the depth of movement of the awl is determined by the position of the horn, as set forth."

In specific construction the awl-operating mechanism of the Cummings & Coupal patent is somewhat different from that of the George Goddu patent No. 583,044 just described by me, but there is nothing in the specification or claim of said Cummings & Coupal patent which indicates that the invention is limited to specific construction of said mechanism; and in the absence of such limitation it is clear that the mechanism of the Goddu patent is substantially equivalent to that of the Cummings & Coupal patent, as it comprises the same essential elements, viz., the vertically movable upwardly spring-pressed horn, the awl, and awl-operating mechanism, and connections between said awl-operating mechanism and the horn whereby the awl is given a varying depth of movement determined by the position of the horn, these being the elements referred to in said claim 2 of the Cummings & Coupal patent. The specific construction of the connections between the horn and the awl-operating lever of the machine of the Cummings & Coupal patent is shown for convenience separate from the remainder of the machine in the drawing marked "Awl Stroke Controlling Mechanism, Cummings & Coupal in Suit No. 493,910", and is as follows: —

The horn *c* (see fig. 1 of the patent) is carried by post c^1, supported at its lower end upon one arm of a lever, *c*-3, fulcrumed at *c*-4. The other arm of this lever *c*-3 is connected by a rod, *c*-6, with one arm of a lever, *c*-7, fulcrumed (as best shown in fig. 3 of the patent) at *c*-8 upon one arm of a vibrating lever, *c*-9, fulcrumed at *c*-10, the other arm *c*-60 of which is actuated by a cam, *c*-61, on the driving shaft *b*. The forward end of the lever *c*-7 is connected

by a link, c-12, with the awl bar c-13 (see fig. 2) carrying a pair of awls, c-16. Looking at fig. 3 of the patent it will be seen that so long as the horn c remains stationary, the point c-70 of connection between lever c-7 and the rod c-6 remains stationary, and serves as a fulcrum or pivot for said lever c-7, which is then vibrated up and down on said pivot by the lever c-9, c-60, and cam c-61 at each rotation of the main shaft, giving the awl a uniform movement, and causing it always to descend or penetrate to the same level. If, however, the horn is depressed, it will raise the fulcrum c-70, the effect of which may be recognized by considering the connection c-8 as a fulcrum, so that raising the rear end c-70 of the lever serves to depress the front end of the lever and the awl bar c-13 connected therewith, so that the path of vibration of the awl bar will now extend to a lower point than before, corresponding to the distance to which the horn has been depressed. Similarly, if the horn were raised, the downward movement of the awl would terminate at a higher point. The only difference in effect between this connecting mechanism and that of the George Goddu patent 583,044 is that the Cummings & Coupal mechanism retains the length of stroke of the awl constant, but varies the location of the said stroke so that its lower terminus stands at a higher or lower point, depending on the position of the horn, and is substantially at the same distance from the horn, whatever its position may be. In the George Goddu machine, however, the length of stroke is variable, the awl always rising to the same point, but descending different distances therefrom according to the position of the horn. As the exact position of the awl at the end of the up stroke is immaterial, this difference in the mode of operation is of no material consequence, and it is to be borne in mind that the sole purpose of the mechanism of the Cummings & Coupal patent is to automatically regulate the extent of the downward movement of the awl, and it is only the effect of the mechanism in controlling the *downward* movement of the awl that is referred to in the claim, and the mechanism of the Goddu patent accomplishes precisely the same purpose in substantially the same way. The machine of the Cummings & Coupal patent is designed especially to operate with staples instead of with single

nails, and for this reason the awl bar is shown as provided with two awls, one for each leg of the staple. This difference in the character of the fastenings used, however, is immaterial so far as the purpose, mode of operation and result of regulating the depth of penetration of the awl is concerned, and the Cummings & Coupal patent clearly points out in the paragraph beginning at line 32, page 7, that these portions of the invention are not limited to —

"machines in which the fastening device is a staple, as several of the important features of our invention may be used in connection with machines . . . for making and driving single nails not of staple form."

For the above reasons I am of opinion that the machine shown and described in the George Goddu patent No. 583,044 either in the specific construction there shown, or modified as to the toothed connection between the awl bar and actuating lever shown in the drawings above referred to, clearly embodies the combination shown and described in the Cummings & Coupal patent, and referred to in claim 2 thereof. As possibly bearing upon the question whether or not claim 2 of the Cummings & Coupal patent is limited to the specific connecting mechanism between the horn and the awl bar, it is to be observed that claims 3 and 4 are otherwise for the same subject-matter as claim 2, but specify more definitely the mechanism of the connections from the horn to the awl-operating mechanism as including a lever having a shifting fulcrum, while claim 2 contains no limitation as to the details of construction of the "connections between said awl-operating mechanism and the horn".

I am also of opinion that a machine otherwise like that shown and described in the George Goddu patent No. 583,044, but having the toothed connection between the awl bar and its actuating lever as shown in the drawings "Defendants' Loose Nailer" and "Defendants' Loose Nailer Awl Stroke Controlling Mechanism" and "Defendants' Loose Nailer Detail Awl Actuating Mechanism", embodies the combination shown and described in patent to Louis Goddu No. 383,455, and referred to in claim 1 thereof. The said claim is as follows: —

"In a nailing-machine, a vibrating head, a driver-bar, and awl-

carrier therein, the latter provided at one side with teeth, and a toothed sector to move it, combined with a horn to support the work, substantially as described."

This claim refers specifically to the construction in which the awl bar is provided with teeth and actuated by a toothed sector, and is precisely the connection between the awl bar and lever shown in the said drawings "Defendants' Loose Nailer" and "Defendants' Loose Nailer Awl Stroke Controlling Mechanism" and "Defendants' Loose Nailer Detail Awl Actuating Mechanism". The mechanism forming the subject of this claim is shown in the drawing marked "Awl Actuating Mechanism Goddu Patent in Suit No. 383,455".

The elements of claim 1 of patent 383,455, other than the toothed awl bar and toothed sector to move it, are the vibrating head and the nail-driver bar and awl bar which reciprocate therein. The head has a vibrating movement by which the awl is brought, at the proper time, to the position at which the material is to be penetrated, and the driver is also brought at the proper time to the position where the nail is to be driven. In the machine of George Goddu patent No. 583,044, the awl bar *a*-2 and the driver bar *a*-3 are likewise guided in a vibrating head *a*-4 which vibrates on the pivot *a*-5 to alternately bring the awl and driver at the point where the material is to be penetrated and the nail to be driven. It is perfectly clear, therefore, that the machine of George Goddu patent 583,044, modified so as to embody the toothed connection between awl bar and its actuating lever, as illustrated in drawings "Defendants' Loose Nailer" and "Defendants' Loose Nailer Awl Stroke Controlling Mechanism" and "Defendants' Loose Nailer Detail Awl Actuating Mechanism", embodies all of the elements of the combination shown and described in Goddu patent No. 383,455, and referred to in claim 1 thereof. The identity of the specific connecting mechanism between the awl bar and the lever for moving it, which is the feature wherein the novelty of the combination of claim 1 of said patent No. 383,455 resides, is apparent upon inspection of the drawings "Defendants' Loose Nailer Detail Awl Actuating Mechanism" and "Awl Actuating Mechanism Goddu Patent in Suit, No. 383,455".

I will next take up the mechanism for depressing the horn to release the material for the feed operation.

Horn Depressing Mechanism.

As explained in my general preliminary description of the machine of George Goddu patent 583,044, the horn is depressed to provide for each feed operation, by means of mechanism adapted to lower the horn from whatever position it happens to occupy, this position of the horn depending upon the thickness of material which is clamped by it at the time when it has to be so moved. The specific mechanism for depressing the horn is shown in drawing "Defendants' Loose Nailer Horn Depressing Mechanism", and, as shown and described in George Goddu patent 583,044, the horn *b* (see fig. 5 of the patent) is constantly pressed upward by a spring, *b*-23, and this spring, unless the horn is otherwise controlled, will always hold it pressed against the under surface of the material, and thus clamp the material against the end of the nose through which the nails are driven. As before explained, the said horn is connected by rod *b*-13, lever *b*-6, and rod *b*-19 with the lever *a*-53 (see fig. 16 of the patent) in the head of the machine near the main shaft *a*-23. Thus said lever *a*-53 is moved up and down to correspond with the movement of the horn, moving up when the horn moves down, and down when the horn moves up, and any instrumentality which will positively lift the lever *a*-43 will correspondingly depress the horn. It is necessary, therefore, to provide mechanism which will lift the lever *a*-53 each time that the feed is to take place so as to depress the horn sufficiently to unclamp the material, and the means for thus lifting the lever *a*-53 must be able to take it from whatever position it happens to stand in, and, furthermore, must disengage or release it after the feed movement is finished so that the spring *b*-23 can press the horn up against the material to clamp it until the next feed operation. In said George Goddu patent the lever *a*-53 is thus engaged and actuated through the intervention of a friction dog, *a*-67, carried by arm *a*-62 of the lever *a*-56, the other arm *a*-58 of which has a cam roller, *a*-59, operated by a cam groove, *a*-60, in a disk, *a*-61, carried by the main shaft *a*-23 of the machine, so that said friction dog *a*-67 is vibrated up and down, once at each

rotation of the main shaft, and at the times when the horn is to be depressed, and again released. Near the end of the downward movement of the dog *a*-67 it is tripped so as to cease to take hold of the end of the lever *a*-53 by a trip arm, *a*-71, which engages a trip block or projection, *a*-72. Thus, towards the end of the downward movement of the dog-carrying arm *a*-62, which permits the horn to rise, the said dog is tripped and the lever *a*-53 thus wholly released and the horn left to continue its rising movement or to be pressed upward by the spring *b*-23 wholly independently of the horn-depressing mechanism. On the other hand, when the arm *a*-62 rises, the trip arm *a*-71 first leaves the trip block, and the dog *a*-67 then engages the lever *a*-53 (at whatever height it may happen to stand) and lifts the said lever, and correspondingly depresses the horn in the remainder of the upward movement of the dog-carrying arm *a*-62. Defendants' loose nailer is a machine having a horn-depressing mechanism otherwise like that of George Goddu patent 583,044, except that, instead of a friction dog, *a*-67, co-operating with a curved friction surface at the end of the lever *a*-53, it has a pawl co-operating with a ratchet-toothed surface on the end of the lever *a*-53, as shown in drawing "Defendants' Loose Nailer Horn Depressing Mechanism", on which the pawl is marked *a*-670, and the co-operating ratchet-toothed surface *a*-690, said drawing also showing a part marked *a*-580, which takes the place of the part designated in said patent by the letter *a*-62, the only difference being that in the patent the part *a*-62 is extended under the shaft *a*-23, while in the machine shown in said drawing the part *a*-580 is extended above said shaft, the remaining parts being designated by the same references as employed for the same parts in the drawing of said George Goddu patent 583,044. The operation of this mechanism is the same as that above described, except that the pawl takes a positive hold of the ratchet teeth instead of a frictional hold as is taken by the dog shown in the drawings of the patent, thus insuring a more certain depression of the horn, and a definite predetermined dowward movement from the position in which the horn is standing at each operation of the depressing mechanism. It will be recognized that if the friction dog should slip or fail to move the horn would not be de-

pressed at all, and if it slipped during a portion of its movement the horn would not be depressed the proper amount. I am of opinion that the horn-depressing mechanism above described of defendants' loose nailer (being the same as that of the George Goddu patent 583,044, except that it has a ratchet and pawl instead of a friction dog) embodies the combination shown and described in patent to Louis Goddu 265,227, and referred to in claims 17 and 18 thereof. Said claims are as follows: —

"17. The horn, its depressing lever, and connected rack-bar, combined with the pawl-carrier, its pawl, and means to lift the pawl-carrier preparatory to moving the stock over the horn, substantially as described.

"18. The horn, its depressing lever, its connected rack-bar, and the pawl-carrier and pawl and means to operate the pawl-carrier, combined with the stop to disengage the said pawl from the teeth of the toothed bar as the carrier descends, substantially as described."

The horn-depressing mechanism of the Louis Goddu patent, 265,227, referred to in the above claims, is substantially identical with that of the machine defendants' loose nailer, above described, except that, instead of having the ratchet-toothed portion and the pawl connected with levers, so as to have an oscillating movement, said ratchet is on a straight bar and the pawl is vibrated in a straight path. This difference is, in my opinion, wholly immaterial, as the effect of the curved ratchet *a*-690, and of the vibration of the lever *a*-53 produced thereby, in defendants' loose nailer, is merely to give an up-and-down movement to the connecting rod *b*-19, and through the connections therefrom to correspondingly move the horn in the reverse direction. Precisely the same effect would be produced if a straight ratchet were employed upon the rod *b*-19, as is done in the machine of Louis Goddu patent 265,227.

The levers *a*-53 and *a*-62 of defendants' loose nailer serve merely to properly guide the ratchet *a*-690 and the pawl *a*-670, the latter moving in a short arc of a relatively large circle, so that the movement does not differ substantially from a rectilinear movement, and does not differ at all, so far as the practical effect upon the horn is concerned.

The drawing "Horn Depressing Mechanism Goddu Patent in Suit No. 265,227" shows the horn-depressing mechanism of patent to Louis Goddu, 265,227, apart from the remaining mechanism of the machine, so that it can be readily compared with the corresponding mechanism of the machine of the George Goddu patent No. 583,044, modified as shown on drawing "Defendants' Loose Nailer Horn Depressing Mechanism". Except that in one case the ratchet and pawl are guided in a rectilinear path by a straight guideway, and in the other case in a curved path by pivoted levers, the mechanism is identical throughout. In both cases the horn is supported on one arm of a lever, the other arm of which is connected with a lifting rod, in turn having connected with it a ratchet-toothed rack bar. In both machines there is a pawl carrier and pawl, and means for lifting the pawl at a predetermined time at each rotation of the main shaft,— said means being a cam on the main shaft and a lever actuated thereby,— to depress the horn preparatory to making the feed movement of the material over the horn; the above being the elements referred to in claim 17 of the Louis Goddu patent No. 265,227. In both machines, furthermore, there is, in combination with the above-named elements, a stop to disengage the pawl from the teeth on the ratchet-toothed bar as the pawl carrier descends, so as to free the horn from the horn-depressing mechanism, in order that it may be pressed against the material, whatever may be its thickness, the said combination including the said pawl-disengaging stop, comprising the elements referred to in claim 18 of said Louis Goddu patent, No. 265,227. There is nothing in said claims which in any way refers to the specific manner in which the ratchet-toothed bar and pawl carrier are guided in their working movement, and there is no difference in the mode of operation or result due to the slight variation in detail of the mechanical construction of the two machines in this respect. For the above reasons I am of the opinion that the machine of the George Goddu patent No. 583,044, modified as stated, clearly embodies the combinations shown and described in Louis Goddu patent No. 265,227, and referred to in claims 17 and 18 thereof.

Nail Feeding Mechanism.

I will next take up the mechanism of defendants' loose nailer for properly supplying the nails from the hopper in which they are contained in a confused mass to the roadway in which they are placed in a single row, heads up and points down, so that they may be properly supplied one at a time to the driver.

The loose nails, which are in a confused mass, are placed in the hopper or receptacle B, of conical shape, rotating on an axis about on a line with the roadway leading to the nose through which the nails are driven. The apex of the cone is downward, and the hopper is rotated while the machine is running, and is provided on its inside with lifting arms or buckets *c*-20 which lift the nails and then drop them upon the upper part of the roadway which extends through the conical hopper from its apex to its base. More or less of the nails thus falling off drop with their points entering the roadway in a proper position to be fed down the same, while the remainder will fall off and be operated upon again by the lifting buckets in a similar manner. There is nothing shown or described in the George Goddu patent No. 583,044 to prevent the clogging of the nails thus deposited in the roadway, or to prevent one overriding another so as to become wedged, but I have been requested to consider a machine otherwise like that shown in the patent, but having above the roadway a clearing device which vibrates just above the tops of the nails in the roadway so that if a nail has been caught by the roadway, but improperly received therein, so that its head stands above the proper position for properly feeding down the roadway, or if a nail has been cross-lodged on the roadway between other nails, such improperly positioned nail will be engaged by the said clearer and either caused to assume the proper position in the roadway or will be thrown off from the roadway so as not to interfere with and clog the nails that are properly presented. The construction of roadway and clearer, which I have been requested to consider, is illustrated in the drawing "Defendants' Loose Nailer Nail Feeding Mechanism". I am of the opinion that a machine containing a roadway and clearer such as illustrated in the drawing referred to embodies the combination shown and

described in the Louis Goddu patent 265,227, and referred to in claim 3 thereof. In the construction shown in this patent, and illustrated in drawing "Nail Feeding Mechanism Goddu Patent in Suit No. 265,227", the loose nails are placed in a receptacle or hopper in the form of a rotating drum which is provided with internal buckets that raise the nails as the drum rotates and drops them upon the roadway which extends through the drum. There is also a clearer or knocking-off device *n*-4, which knocks off those fastenings which are improperly presented or override one another. As shown in the said Louis Goddu patent No. 265,227, the roadway itself has a slight longitudinal vibration, and the knocking-off finger *n*-4 stands still, the result being that the improperly presented nails are hit by the end of the knocking-off finger *n*-4, and thus dislodged from the shoe. The same relative movement and effect are produced in the machine shown in the George Goddu patent No. 583,044, having the clearing device represented in the drawing "Defendants' Loose Nailer Nail Feeding Mechanism", by the vibration of the clearer with relation to the stationary roadway. I am therefore of opinion that the last-named machine embodies the combination forming the subject of claim 3 of Goddu patent 265,227, which is as follows:—

"3. The rotating drum provided with buckets and the chute into which the nails or fastenings are dropped, combined with the knocking-off device a^4 [n^4], with its free end located just above the chute, to throw from the heads of the nails in the chute nails which are lodged therein and not in the chute, substantially as described."

It will be observed that the relative vibration of the roadway and the knocking-off device is not specifically referred to in the said claim, which does not suggest any limitation that would exclude the construction of the machine shown in patent 583,044 provided with a knocking-off device or clearer to dislodge the improperly presented nails.

Patent to Hopkins, No. 289,103, shows and describes specifically a construction by which a similar result to that above described may be attained when there is no vibration of the roadway, or its vibration is insufficient to properly dislodge the nails. As shown in the

Hopkins patent, and in drawing "Nail Feeding Mechanism Hopkins Patent in Suit No. 289,103", the roadway has combined with it a reciprocating clearer or striker, and means to vibrate it so as to cause it to strike against and move backward such headed nails as are not properly lodged in the roadway. I am of opinion that the machine of the George Goddu patent 583,044, provided with a vibrating nail-striker or clearer, such as shown in the drawing "Defendants' Loose Nailer, Nail Feeding Mechanism", embodies the combination recited in claim 1 of said Hopkins patent, which is as follows: —

"1. The roadway combined with a reciprocating striker, to strike against and move upward toward the receiving end of the roadway such headed nails as are not properly lodged in the said roadway, substantially as described."

Anvil or Horn Tip.

I will next take up the consideration of the anvil or tip of the horn which supports the material, and against which the nails are driven.

The horn of the machine shown in patent 583,044 is described in said patent (p. 3, line 65) as "provided at its upper end with a suitable tip or cup *b-x*", and I am requested to consider that the construction and form of said tip is as represented in the drawing "Defendants' Loose Nailer".

The concavity in the upper surface of the said tip serves to cause the end or point of the nail driven through the material to curl backward so as to imbed itself in the material and thus clinch the fastener, and at the same time remove the objectionable pointed projection from the inner surface of the material. I am of opinion that the machine containing such tip or anvil embodies the construction shown and described in patent to Dunham, No. 356,107, dated January 18, 1887, and referred to in claims 1, 2, 3, 5, and 6 thereof, which are as follows: —

"1. In a machine for uniting the soles and uppers of boots or shoes, a work-supporting horn having in its upper extremity a concavity for turning the points of the nails back into the stock, in combination with an awl, substantially as described.

"2. In a boot or shoe nailing machine for feeding and driving

loose nails, substantially as above described, the nail-tube Q, the awl S, and the driver P, in combination with a work-supporting horn having a concavity for clinching the nail, as set forth.

"3. In a boot and shoe nailing machine, guideways adapted to support the nails by the heads, a nail-tube through which the nails are driven into the shoe and mechanism to separate the nails one at a time, an awl, a driver, and a work-supporting horn having a concavity for clinching the nail, as set forth, in combination, substantially as described. . . .

"5. In a nailing machine, in combination, a work-supporting device having on its upper extremity a concavity and awl, substantially as and for the purpose specified.

"6. In a machine for uniting the soles and uppers of boots and shoes, the awl for making the holes for the nails, in combination with a horn having a concavity for clinching the nail, as set forth."

Each of the above claims refers to a combination including certain of the essential elements of a nailing machine for which corresponding elements are embodied in the machine of the George Goddu patent 583,044, in combination with a horn having a concavity for turning the points of the nails back into the stock so as to clinch the nails. It is obvious that the machine of the Goddu patent 583,044, when provided with a horn tip or cup of the form shown in the drawing "Defendants' Loose Nailer", embodies the subject matter of each of the above-named claims of the Dunham patent.

For convenience in comparison the mechanism of the machine of the Dunham patent forming the subject of the above-quoted claims is shown on drawing "Nailing Mechanism Dunham Patent in Suit, No. 356,107", the tip of the horn being shown in section to illustrate the construction which is described in the specification of the patent, as follows (line 78, page 1, to line 14, page 2):—

"W is a work-supporting horn, which has a concavity, *a*, in its upper extremity, the shape of which is adapted to turn the point of the nail into the stock in the form of a circle. This concavity, operating in combination with the awl, is an element of vital importance in my invention. I have found in practice that the use of an awl with the concavity in the horn is essential to good work. The peculiar clinch caused by the concavity is due to the point of the fastening striking the inclined part of the concavity, forming its curvature, and then turning back into the work. It is therefore

necessary that the fastening be directed to the inclined part of the concavity. If it should strike the bottom first, the fastening would be liable to be crippled. The degree of curve in the clinch of the fastening is determined by the distance from the bottom of the concavity at which the fastening strikes. I provide an awl for this purpose which is so operated and adjusted that it makes the holes in the shoe-sole so that the nails driven therein will strike the incline in the concavity, thereby making a perfect curved clinch. Without this relation of the awl and concavity the nails would be driven without any regularity whatever, sometimes not striking the horn at all, and not even penetrating the shoe sole. The combination of the awl and the horn is adapted as well to other shoe-nailing machines as to the class in which loose nails are driven. It is adapted to machines in which a fastening is driven which has any kind of a clinching point."

Clutch Mechanism.

I will next take up the clutch mechanism by which the starting and stopping of the machine is properly controlled.

It is necessary in nailing machines of the kind forming the subject of the Goddu patent No. 583,044 that the operator may quickly start and stop the machine, and that when stopped it should always come to rest at a predetermined point in the cycle of operations just after the nail has been driven, and thus stop in position to enable the finished boot or shoe to be removed and another to be placed on the horn, so that when started a machine will perform all the operations necessary to insert the first fastener, and as many more in succession as may be required. This operation is provided for by the clutch mechanism, which is shown for the most part in fig. 1 of the patent, and described in the matter beginning at line 40, page 6, of the specification. For convenience this mechanism is shown detached from the remainder of the machine in drawing entitled "Defendants' Clutch Mechanism". The machine is actuated by a constantly running pulley *d*-4, which is loose upon the main shaft, and therefore does not cause the same to rotate until a locking engagement is effected therewith. Said pulley is provided with a friction surface, which operates with a corresponding friction surface on a pulley or disk, *d*-5, which is fixed upon the main shaft, so that when said pulley *d*-4 is pressed against the disk *d*-5 their friction surfaces will interlock, and the disk *d*-5 and the main

shaft of the machine will be then driven by the power applied to the pulley *d*-4. When it is desired, therefore, to start the machine, the said pulley *d*-4 is pressed against the pulley *d*-5, this being done by a wedge block, *d'*, co-operating with a wedge, *d*, so that upward movement of the wedge *d* crowds the wedge *d'* against the pulley *d*-4 and presses it frictionally against the disk *d*-5. The wedge *d* is thus operated by a treadle, *d*-2, connected therewith by a rod, *d*-3. Thus, when the operator presses down on the treadle *d*-2 with his foot, the clutch members *d*-4 and *d*-5 are engaged and the machine is started; in order to control the stopping of the machine the said wedge *d* is connected by rod *d*-21 with a controlling lever, *d*-9, having a roller, *d*-13, which co-operates with the periphery of the disk *d*-5, which is provided with a depression, *d*-14, on a portion of its periphery, into which the roller *d*-13 may drop when the wedge *d* is to be dropped for the purpose of disengaging the clutch and stopping the machine. When, however, the machine is started as has been described, by the operator depressing the treadle *d*-2, the lever *d*-9 and its roll *d*-13 are raised, and in the rotation of the disk *d*-5 its unrecessed part comes under said roll and thus holds the lever up, and the clutch in engagement, during the greater part of each rotation of the shaft. Of course the said lever will be held up by the operator as long as he desires the machine to run, but just as he reaches the last fastening to be driven he releases the treadle, and the lever *d*-9 and wedge *d* will then remain supported by the disk *d*-5 until its recessed part *d*-14 arrives at roll *d*-13, when the lever *d*-9 will be permitted to drop, and will thus drop the wedge *d* and disengage the clutch, thus permitting the machine to stop only at the time in its cycle of operations when the recess *d*-14 arrives at the roller *d*-13. In order to insure prompt stopping of the machine when the clutch is thus disengaged, the lever *d*-9 is also provided with a brake, *d*-8, which, when the lever *d*-9 drops by the roll *d*-13 entering *d*-14, bears frictionally in the groove *d*-7, in the disk *d*-5, and this quickly arrests the rotation of the said disk on the main shaft of the machine. The said lever is described as pressed down so as to disengage the

clutch and apply the brake when permitted by the operator by a spring not shown in the drawings of George Goddu patent 583,044.

I am of opinion that said clutch mechanism of defendants' loose nailer, shown in the George Goddu patent No. 583,044, embodies substantially the combination shown and described in patent to Louis Goddu, No. 383,455, dated May 29, 1888, and referred to in claims 7 and 8 thereof, which are as follows: —

"7. The loose pulley, the shaft A^5, and the balance-wheel, provided with the cam-surface 2, combined with the yoke, and the roller A^{13}, to co-operate with the said cam-surface, substantially as described.

"8. The loose pulley, the shaft A^5, and the balance-wheel fast on it, combined with the pivoted yoke, and friction device carried by it to act on the balance-wheel, substantially as described."

For convenience, the construction forming the subject of the above claims in this Louis Goddu patent is shown detached from the remainder of the machine in drawing "Clutch Mechanism Goddu Patent in Suit No. 383,455". In the Goddu patent 383,455, as shown in this sketch, a constantly running belt pulley, A^{10}, is provided with a friction clutch surface adapted to co-operate with a corresponding clutch surface upon the balance wheel A^{12}, which is fixed upon the main shaft A^5, these parts thus corresponding to the pulley d^4 and disk d^5 of the machine of the Goddu patent No. 583,044. The said clutch members are pressed together by a lever, A^4, called in the patent "a yoke", fulcrumed or pivoted at A^3 on the frame-work, and operated by a rod, C^4, and treadle, C^5, these parts thus corresponding directly to the treadle d^1, connecting-rod d^2, and lever d^3 of the machine of the George Goddu patent No. 583,044, except that an arm of said lever A^4 operates directly to press the clutch members together instead of employing wedge blocks connected with said lever. The lever A^4 of Louis Goddu patent No. 383,455 is provided with a roll, A^{13}, which co-operates with a cam surface, 2, on the side of the balance wheel A^{12}, said cam surface having a recess, 3, at one point which permits the roll A^{13} to enter and the lever A^4 to drop so as to disengage the clutch. These parts thus correspond exactly to the roll d^{13} and cam surface d^6, having recess d^{14} in the clutch mechanism of the George Goddu

patent No. 583,044. The lever A^6 is also provided with a friction brake, A^{16}, A^{17}, which, when the roll A^{13} enters the recess 3, presses against the edge of the balance wheel A^{11}, and thus operates as a brake to quickly stop its movement, precisely like the brake d^7, co-operating with the disk d^5 in the machine of the George Goddu patent 583,044. The mode of operation and result is precisely the same in both machines. When the operator depresses the treadle, the clutch members are forced together, the brake is released, the machine starts, and the cam surface thereon then prevents the clutch from being disengaged and the machine stopped except at a definite place in the rotation of the main shaft; and the machine remains running so long as the operator retains the treadle depressed. When the operator releases the treadle, the machine continues running for the balance of a rotation, until the depression in the controlling cam arrives at the roll that supports the controlling lever, and said lever drops, and thereby permits the clutch members to separate, and also applies the brake. Except for slight differences in the terms used, the claims of the patent 383,455 are equally applicable to the clutch mechanism of patent 583,044, and the mechanisms themselves are substantially the same in construction, purpose, and mode of operation. The only difference, as above explained, is that, in the mechanism of patent 383,455, the clutch members are forced together by an arm of the lever directly, while in the mechanism of patent 583,044, *i. e.*, in defendants' loose nailer, they are forced together by a wedge connected with and controlled by said lever, the closing movement of the clutch in both cases being produced by the operator, but maintained by the lever, and the opening movement being in both cases produced by the lever after it has been released by the operator, and at the time determined by the cam carried by the main shaft. The specific device of a wedge to directly actuate the clutch members, as in the defendants' loose nailer (patent 583,044), is shown and described in patent to Louis Goddu, No. 385,802 (see figs. 2 and 3), and also, for convenience, shown in drawing "Clutch Mechanism Goddu Patent in Suit No. 385,802", where the wedge is shown at a' and is operated from a treadle by the connecting rod A^5 and

is controlled directly by a roll, a^7, governed by a cam, A^6, so that the wedge can only be depressed to separate the clutch members during a predetermined part of the rotation of the main shaft. This specific construction is referred to in claim 7 of patent 385,802, which is as follows: —

"7. In a nailing-machine, the main shaft, the clutch or friction pulleys thereon, and a wedge to operate the said pulleys, combined with a cam on the main shaft to control the operation or the wedge, to operate substantially as described."

The mechanism of the above claim is distinguished from that of 383,455 by the specific construction of the element for operating the friction clutch members, said device being a wedge, and the said specific construction is embodied in the clutch mechanism of defendants' loose nailer (patent 583,044).

I should add that I have read the affidavit of Franklin O. Tobey, entitled in these suits, and in dealing with the George Goddu patent 583,044 I have considered that this patent of George Goddu shows and describes the same machine illustrated by the several drawings "Defendants' Loose Nailer", "Defendants' Loose Nailer Awl Stroke Controlling Mechanism", "Defendants' Loose Nailer Detail Awl Actuating Mechanism", "Defendants' Loose Nailer Horn Depressing Mechanism", "Defendants' Loose Nailer Nail Feeding Mechanism", and "Defendants' Clutch Mechanism", except for the differences pointed out by Mr. Tobey in his affidavit. In dealing, as I shall hereafter, with the machines of the Louis H. Goddu patent No. 583,045, Louis H. Goddu patent No. 583,046, and the William Goddu patent No. 584,735, I will also bear in mind any differences pointed out by Mr. Tobey between the machines shown and described in these patents and the special drawings illustrating the defendants' construction to which I shall refer.

Screw Wire Machine.

I have examined the Letters Patent to Louis H. Goddu, No. 583,045, dated May 25, 1897, and the drawing marked "Defendants' Screw Machine, Wire Feed Mechanism", for the purpose of ascertaining whether or not in my opinoin the machine shown and described in said patent and drawing (which I will henceforth call

defendants' screw-wire machine) embodies inventions forming the subjects of prior patents to which my attention has been directed, viz., No. 265,227 to Louis Goddu, dated September 26, 1882; and No. 403,835 to Louis Goddu, assignor to James W. Brooks, principal trustee, and Frank F. Stanley, associate trustee, dated May 21, 1889. The machine of the said Louis H. Goddu patent is of the kind known as a screw-wire machine, in which the fastenings are cut immediately after insertion into the leather from a wire of indefinite length with which the machine is supplied. These machines, like the loose nailer previously described, are employed for uniting the soles and uppers of boots and shoes, and the wire from which the fastenings are cut is screw-threaded throughout its entire length, so that the short portions cut therefrom form screws by which the several layers of leather are united. The supply of wire, carried on a suitable reel or spool, is supported on a spindle which rotates rapidly as the machine is running, and said spindle has a longitudinal bore or passage through its axis, through which the wire passes, said spindle terminating at its lower end in a nose which rests directly over the leather, and from which the screw-threaded wire issues as it enters the leather. The rotation of the wire with the spindle tends to cause the wire to screw into the leather just as an ordinary wood screw is screwed into the wood when turned by a screwdriver; but in order to facilitate the entrance of the screw wire into leather, the wire is fed or pressed downward through the spindle and out of nose with a rate of movement properly proportioned to its speed of rotation to advance the wire into the material just in proportion as it tends to advance by the engagement of the screw threads on the wire with the material. These screw-wire machines do not require to have a hole prepared for them in the material, and consequently the machine has no awl; and furthermore, the means for rotating and pressing forward or feeding the wire serves the purpose of the driver in a loose-nailer machine, such as previously described. The screw-wire machine, therefore, generally comprises, as essential elements, a horn or work support to enter within the shoe, and means for rotating and feeding the wire, and means for cutting off the wire just above or

even with the surface of the leather after a sufficient length has been screwed into the leather to serve as a fastening, and means for feeding the material between the successive operations of inserting and cutting off the fastening.

Horn Depressing Mechanism.

In the defendants' screw-wire machine (Louis H. Goddu patent No. 583,045) means are provided for depressing the horn or work support at each feed operation, so as to unclamp the material which was held clamped while the fastening was being inserted. This operation of clamping the material by the horn when the fastening is being inserted, and unclamping it when the feed of the material is to take place, is of the same nature as has been explained in connection with the loose-nailer machine; and in the defendants' screw-wire machine of Louis H. Goddu patent No. 583,045, the horn-depressing mechanism is substantially the same as that employed in the loose-nailer machine previously explained by me, and therefore need not again be explained in detail.

In fig. 14 of the Louis H. Goddu patent No. 583,045 will be seen the curved ratchet-toothed arm or lever d^8 fulcrumed d^7 on the framework, and connected by rod d^9 with the treadle lever d^5 (see fig. 2), pivoted at d^{10} and having its other arm connected by d^{11} with the horn post and horn, all substantially as in the mechanism of the loose-nailer patent. The said curved ratchet-toothed end c is operated by the pawl c^3, which is vibrated up and down by a pawl-carrying lever, c^4, also pivoted at d^7, and operated by a cam groove, c^7, in a cam on the shaft b^{19} that rotates once for each cycle of operations by which a single fastening is inserted. The pawl c^3 thus engages the ratchet wherever it may stand, and lifts the arm d^8 a predetermined distance, correspondingly depressing the horn. When the pawl-carrying arm descends, the pawl is tripped out of engagement with the ratchet by a trip plate, c^{13} (see fig. 3), engaging an arm, c^{14}, connected with the pawl, thus leaving the horn free to be pressed up by its spring d^{10} (see fig. 2), the same as described in connection with the loose-nailer machine.

The construction by which the pawl is tripped does not appear clearly in fig. 14, but it is clearly described in the matter between

line 133, page 5, and line 81, page 6, of the Louis H. Goddu patent No. 583,045.

This horn-depressing mechanism of defendants' screw-wire machine (Louis H. Goddu patent No. 583,045) clearly embodies substantially the combinations shown and described in patent to Louis Goddu, No. 265,227, and referred to in claims 17 and 18 thereof, for reasons hereinbefore fully explained by me in comparing the horn-depressing mechanism of the loose-nailer machine of George Goddu patent No. 583,044 with the mechanism referred to in claims 17 and 18 of Louis Goddu patent No. 265,227.

Wire Feed Mechanism.

As already stated in connection with the general description of the defendants' screw-wire machine, the screw-threaded wire is rotated, and is also pressed forward or feed lengthwise, so as to cause it to penetrate the material by the lengthwise pressure as well as by the feed of the screw threads due to rotary motion. The longitudinal feed movement of the wire is intermittent, ceasing at the time when the inserted fastener is cut off from the wire and while the feeding of the material takes place, and beginning again directly after the material has been fed and clamped in position to receive the next fastening. The length of feed movement, furthermore, is variable, so that each fastener may be caused to pass wholly through, or to approach within any desired distance less than wholly through, the material, whatever the thickness of the material may be. The operation of the wire-feeding devices is automatically controlled by mechanism connected with the horn in such a manner as to limit the extent of feed movement in accordance with the position of the horn, so as to render the feed movement always equal to the thickness of the material at the point where the fastener is being inserted. The mechanism for feeding the wire in the defendants' screw-wire machine (Louis H. Goddu patent No. 583,045) is best shown in figs. 4, 5, and 6 of said patent, which show the construction of the spindle and elements of the feed mechanism directly connected therewith; in figs. 1 and 3, which show the mechanism actuated by the main cam shaft, that is combined with said elements carried by the spindle. For convenience, this mechanism is shown detached from the

remainder of the machine, and, on a larger scale, in drawing "Defendants' Screw Machine, Wire Feed Mechanism".

The spindle a^4 is rotated by a pulley, a^{12} (see fig. 4 of the patent), and carries above the pulley a reel, g, which sustains the supply of screw-threaded wire which passes from said reel down through the central bore or passage in the spindle.

About midway of the length of the spindle, it is provided with a worm, a^7, meshing with a worm gear, b^{22}, on the main cam shaft b^{19}, thus causing said cam shaft to rotate, and produce the necessary cycle of movements in the various parts of the machine in harmony with the rotary movement of the spindle. The lower end of the spindle is provided with a head or frame block, a^8, rigidly connected with it, and containing in suitable bearings a pair of feed rolls, a^{25}, a^{26}, which are grooved to receive the wire between them, and are toothed or serrated in the bottoms of the grooves to engage with the screw threads on the wire, so that as the said feed rolls are rotated in opposite directions they will positively advance the wire through the nose a^{10}. Said feed rolls are provided with gear teeth or pinions meshing together, so that if either one is rotated the other one will be correspondingly rotated in the other direction. One of said feed rolls, a^{25}, also meshes with a driving gear, a^{31}, which is connected with a ratchet, a^{32} (see fig. 10), which receives an intermittent rotary movement from a pawl, a^{33}, carried by an oscillating pawl carrier, a^{34}. Said pawl carrier a^{34} is fixed upon a sleeve, a^{30}, passing through the ratchet a^{32} and gear wheel a^{31}, and provided with a pinion, a^{27}, which meshes with a rack, a^{43} (see fig. 5), on a slide, a^{44}, projecting downward from a sleeve, a^{15}, mounted upon the spindle a^4 above the head a^8 that contains the feed rolls, said sleeve being free to slide up and down on said spindle. When the sleeve is caused to slide up and down, it rotates the pinion a^{27} first in one direction and then in the opposite direction, and in the downward movement of the rack bar a^{43} the pinion a^{27} oscillates the pawl carrier a^{34} in the direction to cause the pawl a^{33} to engage the ratchet a^{32}, and thus rotate the pinion a^{31}, which in turn rotates the pair of feed rolls to advance the wire down through the nose a^{10}. When the sleeve a^{15} and the rack a^{44} are moved upward, the pinion

a^{27} and pawl carrier a^{24} are rotated in the opposite direction, and the pawl slips over the teeth of the ratchet a^{22}, which is not rotated, and consequently the feed rolls receive no movement during this upward movement of the sleeve a^{15}.

The sleeve a^{15} derives its up-and-down movement from a ring, a^{18}, engaged with the said sleeve above and below, and provided with oppositely projecting arms a^{19}, a^{20}, which are engaged by the two branches b, b^1 (see figs. 1 and 3), of one arm of a lever fulcrumed at b^2; the other arm, b^3, of which (see fig. 3) is operated in one direction by a cam, b^{17}, on the main cam shaft b^{18}, which acts against a roller stud, b^5, on said arm, and in the other direction by a spring, b^9. The ring a^{18} (or collar, as it is called in the patent) thus forms a yoke to connect the two branches b, b^1, of the lever, so that the force of the lever is transmitted equally to both sides of the axis of the sleeve a^{15}, and thus has the same effect as if applied directly to the axis. If such connecting yoke were omitted, and the lever acted only at one side of the sleeve, it would tend to cause the sleeve to tip and bind in its up-and-down movement on the spindle, and would thus involve a greater expenditure of power, and more wear on the parts, than when the branched lever-and-yoke construction is employed.

As just above explained, the upward movement of the feed sleeve is effected by the spring b^9 when permitted by the cam, and said upward movement is arrested by a stop, d^{30}, engaging with a stop plate d^{31}, on the arm b^3 of the lever, as best shown in figure 3. The position of said stop d^{30} is variable, it being carried by the arm d^{28} of the horn-depressing mechanism above explained, which arm and stop d^{30} move up and down in accordance with the downward and upward movement of the horn. The higher the stop d^{30} stands, the greater movement will be permitted to the lever b^3, and consequently the greater will be the feed movement imparted therefrom to the wire, and the lower the stop d^{30} stands, the less will be the feed movement imparted to the wire; or, in other words, the feed movement will be greater or less according as the horn stands at a lower or higher point, dependent upon the greater or less thickness of the material. The spring b^9 that causes the return or idle

movement of the wire-feed sleeve a^{15} has a coiled portion connected with a roll or hub, b^{10}, b^{13} (see figure 11), adapted to be turned to tighten or adjust the tension of the spring, and to be locked by a bolt, b^{12}, to retain the spring at the desired adjustment.

In general principle of construction and mode of operation, the wire-feeding mechanism of defendants' screw-wire machine (L. H. Goddu patent No. 583,045), above described, is similar to that employed in the machine shown and described in the Louis Goddu patent No. 171,610, dated December 28, 1875, and now expired. The feeding mechanism of L. H. Goddu patent No. 583,045 is, however, referred to in said patent as being "of novel construction", and the main features of novelty, as compared with the mechanism of said expired patent No. 171,610, consist in the construction of the actuating lever and its connection by a yoke with the feed sleeve so that the moving force is applied equally at both sides of the axis of the feed sleeve, and in the construction of the head containing the feed rolls by which the gearing that actuates the feed rolls is all enclosed in the head instead of being at the outside and exposed as in the old machine of the Louis Goddu patent of 1875.

I am of opinion that the defendants' screw-wire machine of L. H. Goddu patent No. 583,045 embodies the combinations shown and described in patent to Louis Goddu, No. 403,835, dated May 21, 1889, and referred to in claims 10, 11, and 12 thereof, the said combinations constituting or embodying improvements on the old machine of the expired patent No. 171,610 just referred to. For convenience, the parts of the machine of said Goddu patent to be now considered are shown detached in drawing marked "Screw Machine, Wire Feed Mechanism, Goddu Patent in Suit, No. 403,-835".

In said patent to Louis Goddu, No. 403,835, the general construction and arrangement of the rotating spindle is best shown in fig. 3, and is substantially the same as that of the spindle of L. H. Goddu patent No. 583,045 above described, said spindle A^{10} being rotated by pulley A^{9} near the upper end, and carrying the reel a^{10}, containing the supply of threaded wire which passes down through

the bore in the axis of the spindle to the wire-feed mechanism, comprising feed rolls connected by gears and actuated by gearing operated by the downward movement of a sleeve, *c*, longitudinally movable on the spindle above the head containing the feed rollers. The connection from said sleeve to the feed rollers is somewhat different in specific construction from that employed in the machine of L. H. Goddu patent No. 583,045, and is as follows:—

Said sleeve *c* has a spirally threaded portion, e^1, which enters a corresponding threaded portion in a surrounding tube or sleeve, *e*, which is capable of rotation on and relative to the spindle, but has no longitudinal movement thereon.

The feed-actuating sleeve *c* has a longitudinally grooved connection with the spindle, so that it can move only lengthwise of said spindle, without rotation relative thereto. Thus, by reason of the spirally threaded connection between the sleeve *c* and the sleeve *e*, the latter is rotated back and forth with relation to the shaft as the former is moved up and down lengthwise of the shaft. At the lower end, the sleeve *e* is connected by a ratchet-clutch cennection with a bevel-toothed gear, *d*, encircling the spindle just above the head containing the feed rolls, and by reason of the ratchet-clutch connections said gear *d* is rotated when the sleeve *e* is turned in one direction (*i.e.*, by the downward movement of the sleeve *c*), but is not rotated when the sleeve *e* is turned in the opposite direction (by the upward movement of sleeve *c*). Said gear or toothed ring *d* meshes with a gear, c^5, in the head at the lower end of the spindle; said gear c^5 having a pinion, c^6, which meshes with the pinion c^{20} on one end of the feed roll b^4. On the other end of the feed roll b^4 there is a pinion, c^7, which engages a pinion, c^8, on the end of the other feed roll b^3. The sleeve *c* is engaged by a yoke, D^{13}, which is actuated to reciprocate the sleeve on the spindle, said yoke deriving its movement from the branched arm of a lever, D^{14}, having on its other arm a roller-stud, D^{16}, which is actuated, as in the L. H. Goddu patent, by one side of a face cam, D^{17}, said lever lifting said yoke at both sides, so that the force of the lever D^{14} is transmitted equally at both sides of the axis of rotation of the sleeve *c*, as in said L. H. Goddu patent No. 583,045. The result of this

connection is that the feed rolls are rotated intermittently, turning when the feed-actuating sleeve *c* is moved downward, and standing still when said sleeve is moved upward, precisely the same as in the feed mechanism of the Louis H. Goddu patent No. 583,045 above described, the said operation being produced by substantially the same elements, but with a somewhat different mechanical arrangement. In place of the vibrating rack bar connected by a ratchet and pawl with a pinion meshing with the feed rolls, there is the toothed ring *d* meshing with the feed rolls, and having the ratchet connection between it and the vibrating sleeve.

Claim 10 of the Louis Goddu patent No. 403,835 is as follows:—

"The wire-carrying spindle, the feeding-sleeve and the yoke to support the said sleeve, combined with a lever reciprocating the said yoke and with a cam to actuate the said lever, substantially as described."

This refers to the construction in which a yoke is employed as a connection between the branched lever arm and the feed sleeve in the wire-feeding mechanism, and said construction is clearly embodied in the machine of the Louis H. Goddu patent No. 583,045, wherein the spindle a^4 is the wire-carrying spindle, the sleeve a^{15} is the feeding sleeve; the ring a^{18} with its trunnions a^{19}, a^{20}, is the yoke to support the feed sleeve; the lever with its branched arm *b*, b^1 is the lever for reciprocating said yoke; and the cam b^{17} is the cam for actuating the lever. It will be observed that in claim 10 the connections from the feeding sleeve to the wire are not specifically referred to, and, so far as the coaction with the elements referred to in said claim is concerned, the mechanism from the sleeve a^{15} to the wire in the Louis H. Goddu patent No. 583,045 is a substantial equivalent for the mechanism from the feed sleeve *c* to the wire in the Louis Goddu patent No. 403,835.

Claim 11 of said patent No. 403,835 is as follows:—

"The wire-carrying spindle, the feeding sleeve, and the yoke to support the said sleeve, combined with a lever reciprocating the said yoke, and with a cam to actuate the said lever, and with an upwardly-pressed horn, a measuring-leg connected with the said lever, and intermediate connections between the said leg and horn, substantially as described."

This claims refers to the same elements as claim 10 (characterized by the yoke and branched lever for operating the feed sleeve), and in combination therewith, the horn and the measuring leg connected with the lever, and intermediate connections between the leg and the horn. The latter elements constitute the mechanism by which the length of the feed movement is governed in accordance with the position of the horn, and consequently in accordance with the thickness of the material, and are an equivalent for the corresponding mechanism of the machine of the Louis H. Goddu patent No. 583,045 before explained, wherein the stop projection d^{31} constitutes the measuring leg connected with the feed-sleeve actuating lever, and the connection from the said measuring leg to the upwardly pressed horn comprises the stop d^{30} on the arm d^{8}, the link d^{9}, lever d^{7}, and rod d^{18}.

The purpose and mode of operation of these connections are precisely the same as those of the connections of the machine shown in the Louis Goddu patent No. 403,835 referred to as an element in claim 11, and which consist specifically of the rigid arm G connected with the horn and a rod, G^{1}, extending upward therefrom so as to form a variable stop for the "measuring leg G^{2}", which is merely a long stop projection connected with the actuating lever D^{14} that directly operates the feed sleeve. In both machines the feed-sleeve actuating lever is moved positively by a cam in the direction to produce the feed, and in the reverse direction by a spring, and its reverse or idle movement is limited by the stop, the position of which varies as the height at which the horn stands varies, and therefore controls the length of the next feed movement of the wire in accordance with the thickness of the material. In the machine of the Louis Goddu patent No. 403,835 the lever, as has been stated, is actuated by a spring shown as a spiral spring, 14 (see fig. 1), the force of which, exerted to move the lever, is regulated by an adjusting nut, 16, said spring being coiled around a rod, 12, which retains it in place, and enables its adjustment to be effective.

Claim 12 of said Louis Goddu patent No. 403,835 is as follows:—

"The wire-carrying spindle, the feeding sleeve, and the yoke to

support the said sleeve, combined with a lever reciprocating the said yoke, and with a cam to actuate the said lever, and with the rod 12, spring 14, and adjusting-nut 16, to operate substantially as described."

This claim refers to the same elements as claim 10 (for which, as has been above explained, there are full equivalents in the machine of the Louis H. Goddu patent No. 583,045) in combination with the spring, its supporting rod, and adjusting nut. Substantial equivalents for these latter elements are found in the spring b^9, supporting hub b^{10}, b^{11}, and clamping bolt b^{12} (see fig. 11) of the Louis H. Goddu patent No. 583,045.

Claim 26 of the Louis Goddu patent No. 403,835 is as follows: —

"In a machine for uniting soles to uppers, the wire-carrying spindle having the enlarged lower end, combined with feed-rolls geared together and driven by a gear located wholly within the said enlarged lower end, substantially as described."

The above claim refers especially to the construction wherein the gear which drives the feed rolls is enclosed or located wholly within the head or enlargement at the lower end of the spindle, instead of being outside and exposed, as in the earlier machines of this type. As has been previously explained, the feed rolls in the machine of L. H. Goddu patent No. 583,045, and the gear a^{31} which drives them, are located wholly within the head or enlargement at the lower end of the spindle, and for this reason I am of the opinion that the said machine of L. H. Goddu patent No. 583,045 embodies the construction forming the subject of claim 26 of the Louis Goddu patent No. 403,835.

Claim 18 of said Goddu patent No. 403,835 is as follows: —

"The lever D^{14}, its attached measuring-leg having a collar, 40, the oscillating rod 22, and the block 25, attached thereto, combined with a stop, substantially as described, actuated by the said block to prevent the descent of the said measuring-leg when it is desired to arrest the feed of the wire, substantially as described."

The above claim refers somewhat specifically to the combination of the elements by which the effective operation of the machine is stopped. It will be recognized that in machines of this type the

spindle and other parts may remain running while the operator depresses the horn to remove the shoe and supply another one, provided that the wire-feeding mechanism is prevented from operating, since the rotation of the spindle (and the movement of the device that feeds the material when the machine is in operation) does no harm if the wire is not advanced from the nose. As has already been explained, the feed of the wire is produced by the up-and-down vibration of a feed sleeve on the spindle, and said sleeve is operated by a lever which is moved positively in the direction to feed the wire, and by a spring in the opposite direction. It is necessary, therefore, in order to prevent the spring-actuated return movement, and thus wholly stop the wire feed, only to interpose or place an obstruction to arrest the movement of the lever *b* of the L. H. Goddu machine, or the lever D'' of the Louis Goddu machine. Such stopping of the return movement of the feed sleeve is effected in the machine of the Louis Goddu patent No. 403,835 by a stop block or obstruction, 27, co-operating with a projection or collar, 40, on the measuring leg G', which, as has been explained, normally operates to limit the return movement of the feed sleeve in accordance with the thickness of the material. (See figs. 1 and 17 of patent 403,835, and see also drawing "Screw Machine Wire Feed Mechanism Goddu Patent in Suit No. 403,835".) Said stop block 27 is shifted so as to engage with the collar 40 when it is desired to stop the wire feed, or so as to be out of the path of the collar 40 when it is desired to permit the wire feed to go on, such shifting being effected by a block, 25, and a rock shaft, 22, operated by the operator through the intervention of a knee lever H'. In the macnine of the L. H. Goddu patent No. 583,045 the wire feed is stopped for the same purpose, in substantially the same manner, and by substantially equivalent mechanism. In the machine of this patent the measuring leg which determines the extent of the wire feed is not a separate rod connected with the feed-sleeve actuating lever, but is a projection of the lever itself. Said lever has a second projection, *h'* (see fig. 3, patent No. 583,045, and also drawing "Defendants' Screw Machine Wire Feed Mechanism"), corresponding to the collar 40 of the mechanism recited in claim 18

of patent No. 403,835; an oscillating hub pivoted on a pin or stud, h^3, said hub corresponding to the oscillating rod 22 of said claim; a block enlargement of said hub, and a stop, h^4, actuated by it to engage with the projection h^2 on the feed-sleeve actuating lever so as to prevent its descent, and consequently to prevent the operation of the feed sleeve when it is not desired to feed the wire. This mechanism, although differing somewhat in the details of mechanical construction and arrangement, and in being operated by a handle instead of a knee lever, corresponds in purpose and mode of operation with the wire-feed stop mechanism shown and described in said patent to Louis Goddu, No. 403,835, and referred to in claim 18 thereof, and operates in substantially the same manner, for the same purpose and with the same result.

Slugging Machine.

I have also examined patent No. 583,046 to L. H. Goddu, dated May 25, 1897, and the drawings "Defendants' Slugging Machine" and "Defendants' Clutch Mechanism" for the purpose of comparing the machine therein shown, which I will hereinafter call "defendants' slugging machine", with certain prior patents to which my attention has been directed, viz., No. 383,455 to Louis Goddu, dated May 28, 1888, and No. 563,478 to Louis Goddu, dated July 7, 1896. Said defendants' slugging machine is a nailing machine of the class commonly known as a "slugging" machine. Such machines are commonly employed for driving one or more rows of nails into the heel of a boot or shoe, mainly for the purpose of improving the appearance of the heel and increasing its capacity to resist wear. Such nails are not primarily for the purpose of fastening the heel to the upper, and it therefore is not necessary that they should penetrate wholly through, or to within a definite distance from, the insole of the boot. It is, however, desirable that the nails should be of some definite shape in cross section, and that different sizes of nails should be used in different classes of work. The nails are cut from a continuous strip of wire of the required sectional shape, said wire being of uniform section throughout, so that there is no enlargement — or head, properly speaking — for the individual nails cut therefrom. Defendants' slugging machine

contains a clutch mechanism operated by a treadle for starting the machine, with a device to stop the machine only at a definite point in the rotation of the main shaft. Said clutch mechanism is of substantially the same construction and mode of operation as that embodied in the loose nailer before described, except that the wedge that forces the clutch members together (as shown in the patent) is not linked to the lever that controls the brake in such manner that said lever may also control the movement of the wedge that permits the separation of the clutch members to take place. The wedge does, however, control the lever, so that when the wedge is moved to close the clutch, it lifts the lever, which thus removes the brake, and thereafter the lever and brake remain under the control of the cam on the main shaft. Thus, when the operator releases the treadle, the clutch members are permitted to separate, and the power is thus taken off from the driving shaft, which runs for the balance of a rotation by momentum until the controlling cam permits the controlling lever to drop and thus apply the brake and stop the machine at the desired point.

I am of the opinion that the clutch mechanism of defendants' slugging machine (shown in patent No. 583,046; see, also, drawing "Defendants' Clutch Mechanism") embodies the combination shown and described in the patent to Louis Goddu, No. 383,455, and recited in claims 7, 8, and 9 thereof, for the reasons given in comparing the clutch mechanism of the defendants' loose nailer with the subject matter of said claims, as the difference between the clutch mechanism of the defendants' slugging machine and that of the loose nailer is immaterial so far as the subject matter of the claims is concerned.

Wire Passage.

The wire from which the nails are cut passes through a passage, a^{15}, properly shaped to fit the sectional shape of wire desired, said passage being formed in a block, a^{16}, which is secured by a bolt, a^{17}, on the side of the lever a^{8}. (See drawing "Defendants' Slugging Machine".) There is thus formed a tubular passage, which entirely surrounds the wire, and said passage is produced by making the groove a^{15} in the block a^{16} of sufficient size to wholly imbed the wire,

so that the lever a^3 merely covers the side of the said groove, and does not itself have to be grooved to produce the desired wire passage. This is of importance where frequent changes are required in the size or sectional shape of the wire, as it is necessary only to remove one piece, namely, the grooved block a^{16}, when a change of wire is to be made, while if the wire passage were formed partly in each of two blocks, both would have to be changed when a different-sized passage was required. This construction of wire passage in defendants' slugging machine, in my opinion, embodies the invention shown and described in the patent to Louis Goddu, No. 563,478, dated July 7, 1896, and referred to in claim 4 thereof, which is as follows: —

"4. In a nailing machine for forming nails from a continuous length of wire, the following instrumentalities, viz: a wire-guideway composed of two pieces b, b^1, one of said pieces being grooved to receive the wire, the other piece presenting a plane or ungrooved face to the wire, feeding mechanism to feed the wire through said guideway, and cutting mechanism to sever the said wire into nail lengths, the provision of making the wire-receiving groove wholly in one-half the guideway enabling said half to be readily changed to adapt the machine to the use of wires of different cross-sections, substantially as described."

The mechanism referred to in the above claim is shown in drawing "Slugging Machine Goddu Patent in Suit, No. 563,478", and is characterized by the wire guide composed of two pieces, b, b^1, one only, b, of which is grooved to receive the wire, while the other covers the said groove by a plain or ungrooved face. With reference to the remaining elements of the said claim, viz., a feeding mechanism to feed the wire through the guideway and a cutting mechanism to sever the wire, there is no limitation in the claim to the specific construction of said elements, and the slugging machine of patent to Louis H. Goddu, No. 583,046, contains corresponding wire feeding and severing elements.

String Nailer.

I have also examined patent to William Goddu, No. 584,735, dated June 15, 1897, and the drawing marked "Defendants' String Nailer", for the purpose of comparing the machine therein shown

and described, which I shall hereinafter call "defendants' string nailer", with the subject matter of certain patents to which my attention has been directed, viz., No. 490,625, dated January 24, 1893, to Louis Goddu, assignor to James W. Brooks and Frank F. Stanley, trustees; No. 383,455, dated May 29, 1888, to Louis Goddu, assignor to James W. Brooks, trustee; and No. 385,802, dated July 10, 1888, to Louis Goddu, assignor to James W. Brooks and Frank F. Stanley, trustees. Said patent No. 584,735 shows and describes a nailing machine of the kind known as a "string nailer", on which a series of partially formed nails are made from wire which is kept continuous, but is shaped so as to provide portions of a definite length, each of which when separated from the wire, will form a nail having a point at one end and a head at the other end. Such machines are employed for various nailing operations other than that of uniting the soles and uppers, and consequently require, or are provided with, a different kind of anvil or work support from the horn employed in machines that are used to unite soles and uppers. As shown in said patent 584,735, the work support d^{15} is mounted on a rod or spindle, d^{8}, which is spring-supported in a swinging arm, D, having a shank which is pivotally supported in a socket in a lug, d, on the post A^{2} of the machine, so that the said arm D can be swung around out of the way when it is desired to afford free access to the driveway of the nailing machine. The work support is retained in a proper position under the driver passage by a locking device, shown as a set-screw, d^{3}. When the set-screw is loosened, the arm D carrying the work support can be swung around out from under the nail driver, as when it is desired to present, by hand, material to be nailed.

I am of opinion that the work support of this string-nailer machine embodies the construction shown and described in patent to Louis Goddu, No. 490,625, and referred to in claims 12 and 13 thereof, which are as follows: —

"12. A driver-bar having a driver, combined with a supporting column, work-support and a swing-frame for such support pivoted to said column out of line with the driver and adapted to be swung from the column to bring the work-support in line with the driver and a locking device to retain it in such position, and also adapted

to be swung toward and be arrested by the column to move the work-support out of line with the driver, substantially as described.

"13. A driver bar having a driver; an arm as A^3 pivoted at one side of the line of movement of the driver—a locking device to retain it in operative position, combined with a spring-sustained shank, a work-support secured thereto, and an adjusting device to control the effective strength of the said spring, and means to determine the position to which the work-supporting surface may rise, substantially as described."

The work support A^4 in said Louis Goddu patent No. 490,625 is supported by a swinging arm, A^3, pivoted to the framework, and free to be turned aside from or under the nose or driver passage of the machine, substantially the same as the work support of the defendants' string-nailer machine (shown and described in William Goddu patent No. 584,735).

In both defendants' string nailer and the machine of the Louis Goddu patent No. 490,625 there is a locking device for retaining the work-supporting arm in position in alignment with the nose or nail passage of the machine, and in both of said machines the work support proper (in the end of said arm) is spring-supported, and has an adjusting device to control the effective strength of the supporting spring, and means to determine the position to which this work-supporting surface may rise. The substantial identity in construction of this work-supporting mechanism in said machines is obvious upon inspection of drawings "Defendants' String Nailer" and "String Nailer Goddu Patent in Suit, No. 490,625", wherein said mechanisms are respectively represented.

Defendants' string nailer contains a clutch mechanism adapted to be operated to start the machine by a treadle actuated by the operator, and controlled, as to the point at which the clutch is disengaged and the machine stopped, by a cam and brake.

This clutch mechanism is substantially the same in construction and mode of operation as that embodied in Defendants' loose nailer, and in my opinion embodies substantially the combinations shown and described in patent to Louis Goddu No. 383,455, dated May 29, 1888, and referred to in claims 7 and 8 thereof, and also embodies substantially the combination shown and described in

patent to Louis Goddu No. 385,802, dated July 10, 1888, and referred to in claim 7 thereof, for the reasons given by me in discussing the clutch mechanism of Defendants' Loose Nailer.

DEFENDANTS' EXHIBIT 104.

[Put in Evidence, page 2090.]

CIRCUIT COURT OF THE UNITED STATES,
DISTRICT OF MASSACHUSETTS.

IN EQUITY.

No. 985.

JAMES W. BROOKS ET AL.
v.
GODDU SONS METAL FASTENING COMPANY ET AL.

BILL OF COMPLAINT.
(Filed Feb. 2, 1898.)

To the Honorable the Judges of the Circuit Court of the United States for the District of Massachusetts:

James W. Brooks of Petersham in the County of Worcester and Commonwealth of Massachusetts, and Frank F. Stanley of Boston in the County of Suffolk and Commonwealth aforesaid, Plaintiffs, bring this their Bill of Complaint against Goddu Sons Metal Fastening Company, a corporation duly organized under the laws of the State of Maine, and having its principal place of business at said Boston, Louis Goddu, Louis H. Goddu, William Goddu, Napoleon Goddu, Elmer Goddu, and George Goddu, all of Winchester in the County of Middlesex and Commonwealth aforesaid, and Albert Van Wagenen of Newton in the County of Middlesex and Commonwealth aforesaid, Defendants.

And thereupon the plaintiffs complain and say as follows:

First. The plaintiffs are trustees of a voluntary association known as the McKay Metallic Fastening Association, under a declaration of trust hereinafter referred to and are engaged as such trustees in carrying on the business of manufacturing and leasing machines for inserting metallic fastenings in boots and shoes. The machines used by the plaintiffs include so-called standard screw

machines, by which screw-threaded wire is inserted in boots and shoes to fasten the soles together and to fasten the uppers to the soles; so-called tacking machines by which various kinds of metallic fastenings are inserted in the soles of boots and shoes; loose nailing machines so-called, by which headed nails fed into the machine are driven into the soles of boots and shoes; and so-called slugging machines, by which metallic fastenings are driven into the soles and heels of boots and shoes for the purpose of ornament or to increase the durability of the wearing surface. The standard screw machines, some variety of the tacking machines, loose nailing machines and slugging machines above referred to make a set used frequently in conjunction upon the same shoe, and manufacturers who desire to use metallic fastenings in the soles of boots and shoes or to insert so called slugs in the soles or heels, often require machines for all these kinds.

Second. About or prior to the year 1875 the defendant Louis Goddu invented a screw machine, or the essential parts thereof, of the general character of the standard screw machine above referred to and designed for the same purpose, and also invented a tacking machine. One Albert Van Wagenen and others had also invented appliances for use in connection with and less important parts of said standard screw machine and tacking machine. None of the other machines above referred to had at this time been invented. Said Louis Goddu and said Albert Van Wagenen prior to 1877 transferred their said inventions to a corporation known as the American Cable Screw Wire Company, and in 1877 said corporation held patents for said inventions. On or about June 9, 1877 one Gordon McKay and the plaintiff James W. Brooks acquired all said patents from said American Cable Screw Wire Company and also acquired other patents relating to metallic fastenings from other persons, in order to hold the same as principal trustee and associate trustee respectively under said declaration of trust for the benefit of said voluntary association known as the McKay Metallic Fastening Association, which was then first organized, and to engage in and carry on the business above described for the benefit of such association; and said McKay and Brooks upon the transfer to them

of said letters patent executed a declaration of trust; the same hereinbefore referred to, for the benefit of said voluntary association. A copy of said declaration of trust is hereto annexed and marked Exhibit A and is hereby made a part of this bill.

Third: Said McKay and said Brooks, as trustees as aforesaid, deemed it important to secure the services of said Louis Goddu as being the principal inventor of said standard screw machine and said tacking machine in order to get the benefit of his ingenuity and inventive skill in improving and perfecting said machines and in devising and inventing other machines and appliances, and said McKay and Brooks as such trustees accordingly entered into a contract with said Louis Goddu on or about June 9th, 1877, for this purpose, whereby for seventeen years they should enjoy the exclusive right and benefit of all inventions thereafter made by him relating to fastening together the soles and uppers of boots and shoes with metallic fastenings.

Fourth: Thereafter, to wit, on or about January 1, 1880, said McKay and said Brooks, being respectively the principal trustee and associate trustee of said Association, as trustees as aforesaid in order more effectually to secure the services of said Louis Goddu and the exclusive benefit of his ingenuity and inventive skill and of all inventions thereafter made by him relating to the use of metallic fastenings as aforesaid, entered into a contract in writing and under seal with said Louis Goddu, in substitution for said contract dated June 9, 1877. Said contract so made on or about January 1, 1880, recited that said trustees were desirous of obtaining and securing for said McKay Metallic Fastening Association, further results and benefits from the ingenuity and inventive skill of said Goddu, in the origination and contrivance of other inventions and improvements, relating to metallic fastenings for boots and shoes, or the insertion of metal in soles for any purpose, except for the purpose of lasting boots and shoes. By said contract said Louis Goddu for the considerations therein set forth covenanted and agreed with said trustees that they and the survivor of them as joint tenants and not as tenants in common, the successor or successors to their trust and his or their legal representatives or assigns,

should at all times exercise and enjoy the entire and exclusive right, title and interest, in and to any and all inventions and improvements, not already assigned, which the said Goddu has made or might thereafter make, contrive or originate in the construction or mode of operation of any machine, mechanism, mechanical appliance or instrumentality, relating to metallic fastenings for soles of boots and shoes, or to the insertion of metal in soles for any purpose, except for lasting boots and shoes, to the fullest extent to which the said Goddu, as the inventor or discoverer thereof, would have been entitled to possess, exercise and enjoy the same, within and for the United States and all other countries. And said Louis Goddu thereby for the considerations therein set forth further covenanted and agreed that in order to secure to the said trustees the entire and exclusive benefit and advantage to be derived from said inventions and improvements, he would at their request, and without charge to them but at their expense, make, sign and execute any and all proper documents and written instruments requisite and proper to apply for and obtain the grant, reissue or extension of letters patent in the United States, and such other countries as said Trustees might elect, and to protect therein the exclusive rights to any of said inventions and improvements, and would also make, sign, execute and deliver any and all assignments, transfers and conveyances necessary or proper to vest in said trustees, their successors, legal representatives and assigns, the entire and exclusive right, title and interest in and to each and all of such letters patent, reissues and extensions when granted, as fully as he could exercise and enjoy the same. A copy of said contract is hereto annexed and marked "Exhibit B" and is hereby made a part of this bill.

Fifth. Thereafter, to wit on or about July 30, 1884, said Gordon McKay resigned as such principal trustee and ceased to be a trustee under said declaration of trust, and on said date said Brooks was duly chosen and appointed principal trustee, and the plaintiff Stanley was duly chosen and appointed associate trustee of said McKay Metallic Fastening Association, pursuant to the provisions of said declaration of trust. And said McKay and said Brooks

duly assigned all the patents, contracts, choses in action and other property then held by them as such trustees to said Brooks and Stanley as trustees as aforesaid, pursuant to the terms of said declaration of trust. And said Brooks and Stanley thereupon became and were and since then continuously have been and now are, the principal trustee and associate trustee respectively of said Association, and said Brooks and Stanley as such trustees as aforesaid became and were and now are the owners of all patents and patent rights and inventions and all interests therein and all contracts and choses in action and other property then held or owned for the benefit of said Association under said declaration of trust, and entitled to the benefit of and to enforce as such trustees and for the benefit of said Association pursuant to said declaration of trust, all rights, contracts and agreements and choses in action theretofore acquired or held by the former trustees under said declaration of trust, and became and were and are entitled to the benefit of and to enforce as such trustees said contract with said Louis Goddu dated January 1, 1880 as aforesaid.

Sixth. Subsequent to January 1, 1880 and prior to June 10, 1889 said Louis Goddu made divers inventions not relating to inserting metallic fastenings in the soles of boots and shoes, and assigned the same to a corporation organized by him and by said Albert Van Wagenen, known as the Goddu Improvement Company. Said Brooks and said Stanley being respectively the principal trustee and associate trustee under said declaration of trust as aforesaid and being desirous to secure the entire and undivided services of said Louis Goddu as an inventor for the benefit of said Association, on or about June 10, 1889 entered into a further contract in writing and under seal with said Louis Goddu, whereby they agreed to pay and thereafter they did pay to said Louis Goddu and to said Van Wagenen large sums of money for the stock owned by them respectively in said Goddu Improvement Company, to wit, to said Louis Goddu the sum of seven thousand five hundred (7,500) dollars, and agreed to pay said Louis Goddu fourteen (14) per cent. of all net profits derived from the inventions owned by said Goddu Improvement Company. And said

Louis Goddu thereby, among other things covenanted and agreed that said Brooks as such principal trustee and said Stanley as such associate trustee, their successors and assigns, should at all times have, exercise and enjoy the entire and exclusive right, title and interest in and to any and all inventions, improvements and discoveries which he the said Louis Goddu had made, contrived or originated, and had not already assigned, and which during the term or terms of any patent or patents theretofore assigned by him to the Goddu Improvement Company or thereafter to be assigned by him to the Trustees of the said McKay Metallic Fastening Association under this present agreement, he, the said Louis Goddu might thereafter make, contrive or originate in any industrial art, machine, manufacture or composition of matter, (excepting only such inventions and improvements as were already the subject of other existing contracts between him, the said Louis Goddu and the trustees of the said McKay Metallic Fastening Association) to the fullest extent which he, as the inventor or discoverer thereof would otherwise have been entitled to possess, exercise and enjoy such entire and exclusive right, title and interest within the United States and all other patent granting countries.

And said Louis Goddu thereby further covenanted and agreed for the considerations therein set forth, with said Brooks and Stanley as trustees as aforesaid, that in order to secure to said trustees the entire and exclusive benefit and advantage to be derived from his said inventions, improvements and discoveries, he would, at the request of such Trustees, or either of them, and without personal charge, but at their expense, make, sign and execute, any and all papers, documents and written instruments requisite and proper to apply for and obtain the grant of letters patent in the United States, and any foreign country, and any reissue or extension thereof, to protect therein, the exclusive privileges of constructing, employing and vending, the said inventions, improvements and discoveries, or either or any of them; and would also make, sign, execute and deliver, any and all assignments, transfers and conveyances necessary or proper to vest in the said James W. Brooks, as Principal Trustee, and the said Frank F.

Stanley as Associate Trustee, of the said McKay Metallic Fastening Association, their successors and assigns, the entire and exclusive right, title and interest, in, to and under, each and all of such letters patent, and any reissue or extension thereof, when granted, and the franchise and privileges secured thereby. And said Louis Goddu by said contract further for the considerations therein set forth sold, assigned and transferred to said Brooks and Stanley as trustees as aforesaid, any and all patterns, models and drawings, which he might then or thereafter own, embody, illustrating or representing, either or any of the inventions, improvements or discoveries, which, by the terms of this present agreement, were to belong, or by assignment from the Goddu Improvement Company might belong, to the said trustees of the said Association. A copy of said contract is hereto annexed marked Exhibit C and is made a part of this bill.

Seventh. After the organization of said voluntary Association in 1877, and during the period from then until the present time, the business so conducted by said trustees has largely developed and increased, and through the exertions of said trustees and by the ingenuity and inventive skill of said Louis Goddu, the machines used have been improved and other machines have been devised and invented, and letters patent of the United States issued which are the property of said trustees. About 1884 said Louis Goddu invented and developed a loose nailing machine, for which, together with improvements subsequently devised therein by said Louis Goddu divers letters patent of the United States were duly issued which are the property of said trustees. About 1895 said Louis Goddu invented a slugging machine for which letters patent of the United States were duly issued which are the property of said trustees.

Improvements in all of said machines, herein and in paragraph second referred to, have from time to time heretofore during said period since 1880 been invented by said Louis Goddu and divers letters patent of the United States issued therefor which are the property of said trustees, and during said period divers other machines of the kinds referred to in paragraph first above, and im-

provements therein, have been invented by said Louis Goddu for which divers letters patent of the United States have been duly issued, which are the property of said trustees. All of said machines as improved from time to time as aforesaid, and all letters patent of the United States issued therefor, have been and now are the property of said trustees in accordance with said contracts, and all such machines have been and now are largely used by said trustees in carrying on their said business, and all said machines and the improvements therein and the appliances connected therewith are chiefly the result of the ingenuity and inventive skill of said Louis Goddu. Throughout all of said period from 1877 said Louis Goddu has been closely and intimately acquainted with the business done by the plaintiffs and by their predecessors as such trustees, and has filled a position of confidence towards said trustees and has acquired and now has an exact and exhaustive knowledge of the condition of the business carried on by the plaintiffs, so far as relates to the manufacture and operation of the machines and appliances used by said trustees, and as the principal inventor of said machines and improvements therein and appliances, and by reason of his continuous employment by them and by their predecessors in the trust, he has an accurate knowledge of the merits and the defects of the plaintiffs' said machines and appliances. Said McKay and Brooks as trustees entered into said contract dated January 1, 1880, with said Louis Goddu, and said plaintiffs as trustees entered into said contract dated June 10, 1889 with said Louis Goddu, because of the great importance of maintaining the high quality and standard of their said machines, and in order to secure the exclusive services of said Louis Goddu as an expert inventor for that purpose, and in order to prevent any competitor from securing the services of said Louis Goddu and the benefit of his intimate knowledge of the machines made and used by said trustees. And it is of great importance to said trustees that said Louis Goddu should continue to devote himself to them and that they should have exclusive benefit of his ingenuity and inventive skill, and especially that he should not permit any other person or persons and especially any rival in business of said trustees, to

have the benefit directly or indirectly of his ingenuity and inventive skill or of any conceptions or ideas of his relating to machines or improvements therein or appliances intended for the purposes aforesaid, or any of them, for which the machines now owned by said trustees are used; and that said Louis Goddu should faithfully perform and comply with all the terms and requirements of said contracts dated January 1, 1880 and June 10, 1889, and each of them.

Eighth. Said McKay and said Brooks as long as they were the trustees under said declaration, performed, and said Brooks and said Stanley since they have been such trustees and up to the present time, have performed and are ready and willing for the future to perform all things by said contract dated January 1, 1880, required to be performed by them respectively or by the trustees for the time being of said McKay Metallic Fastening Association; and said Brooks and Stanley as such trustees have since said contract dated June 10, 1889 was made, and up to the present time, performed and are ready and willing for the future to perform all things thereby required to be performed by them. Since 1880 the trustees for the time being under said declaration of trust have in each and every year paid to said Louis Goddu according to the terms of said contract dated January 1, 1880; and since June 10, 1889, said trustees have paid to said Louis Goddu in each and every year in accordance with the terms of said contract dated June 10, 1889, very large sums of money as compensation for his services and for his said inventions, as provided in said contracts respectively, and throughout the entire period from 1877 to the present time the trustees of said Association for the time being have paid to said Louis Goddu in each year a further sum of four thousand (4,000) dollars together with a percentage of the net earnings of said Association, as salary for the services of said Louis Goddu as inventor and master mechanic. The aggregate of the sums so paid to said Louis Goddu during said period by said trustees amounts to more than two hundred thousand (200,000) dollars.

Ninth. Said Brooks and said Stanley upon their appointment as principal trustee and associate trustee respectively, became and

were and since then continuously have been and now are entitled by virtue of said contract dated January 1, 1880, to the sole and exclusive benefit of all inventions and improvements that said Louis Goddu might make, contrive or originate in the construction or mode of operation of any machine, mechanism, mechanical appliance or instrumentality relating to metallic fastenings for soles of boots and shoes or to the insertion of metal in soles for any purpose except for lasting boots and shoes, and since June 10, 1889, by virtue of said contract dated June 10, 1889, to the sole and exclusive benefit of all inventions, improvements and discoveries which said Louis Goddu should make, contrive or originate in any industrial art, machine, manufacture or composition of matter, and to the full benefit of and to all results derived from the ingenuity and inventive skill of said Louis Goddu, and by virtue of each of said contracts to have the ingenuity and inventive skill of said Louis Goddu devoted exclusively to the interests of the trustees for the time being of said McKay Metallic Fastening Association.

Tenth. In the latter part of the year 1895 and early part of the year 1896 said Louis Goddu, notwithstanding the fact that said Brooks and Stanley as trustees as aforesaid had up to that time fully performed and were ready and willing thereafter and for the future to perform all things required to be performed by them under said several contracts and each of them, without just cause and in violation by his covenants and agreements in said several contracts and each of them contained declared his intention to give to said Brooks and Stanley as trustees as aforesaid no further benefit or result of his ingenuity and inventive skill, and since then has wholly neglected and failed and refused to communicate to said trustees or to any one in their behalf, any invention or improvement relating to metallic fastenings for boots and shoes, or in any way to give them any benefit or result of his ingenuity or inventive skill.

Eleventh: From 1877 until October, 1895, said Albert Van Wagenen, who prior to 1877 had made some inventions relating to metallic fastenings for boots and shoes which were acquired by said McKay and Brooks in 1877 as aforesaid, was employed continuously by the trustees for the time being of said McKay Metal-

lic Fastening Association and was paid a large salary. And throughout that time said Van Wagenen had an intimate and confidential knowledge of the business carried on by said trustees and of the patents and inventions used therein and from time to time acquired by said trustees. Prior to September, 1895, there were also employed by said plaintiffs as trustees in said business five sons of said Louis Goddu, to wit, Louis H. Goddu who had been continuously so employed as a machinist for about fourteen years, Elmer Goddu who had been continuously so employed as a machinist and as a pattern maker for about nine years, Napoleon Goddu who had been continuously so employed as a machinist and as a pattern maker for about eight years, William Goddu who had been continuously so employed as a machinist for six years, and George Goddu who had been continuously employed as a machinist for about five years. Said George Goddu left the employ of said trustees on or about September 16, 1895, said Louis H. and Napoleon Goddu left in or about October, 1895, said William Goddu left in or about March, 1896, and said Elmer Goddu left in or about December, 1896. Each of said sons of said Louis Goddu respectively received during the time of his employment by said plaintiffs the wages ordinarily paid machinists and mechanics and no one of them had at any time during such employment devised or invented any new or patentable improvement or invention or given any sign of inventive skill. In or about January 1895 said five sons of Louis Goddu, being then in the employ of said plaintiffs as aforesaid, conspired with said Louis Goddu and with said Albert Van Wagenen, who was also then in the plaintiffs' employ as aforesaid, to produce a set of machines for use in fastening together the parts of boots and shoes with metallic fastenings, comprising a screw nail machine, a loose nailing machine, a slugging machine, tacking machines, and nailing machines for driving string nails so-called, that should be able to perform the same work done by the machines manufactured and leased by said trustees as aforesaid and compete with them successfully; and for this purpose to have said Louis Goddu invent such machines or improvements, which should not infringe the letters patent held by the plaintiffs, and communicate such inventions to

his said sons and instruct them in perfecting and manufacturing machines in conformity therewith, and permit them or some one of them to apply for letters patent upon each of said several machines, and transfer such letters patent when issued to a corporation to be organized for the purpose of manufacturing and leasing said machines.

Twelfth: At some time prior to August 24, 1895, said Louis Goddu conceived the idea of an alleged improvement in the tacking machines, so called, then used by the plaintiffs as aforesaid. Such improved machine was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid. Said Louis Goddu, notwithstanding his covenants and agreements contained in said contracts dated January 1, 1880 and June 10, 1889, respectively, did not give to said plaintiffs the benefit and results of his said idea and invention for such alleged improvement, but, disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea to his said son William Goddu, and perfected said alleged improvement and completed the invention therein embodied, and instructed and directed said William Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said William Goddu to apply in the name of said William as the original inventor thereof for letters patent of the United States therefor. And said William, pursuant to said conspiracy, made such application and on or about October 6, 1896, letters patent of the United States numbered 569,152 were issued to said William Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming part of said letters patent is annexed hereto and marked Exhibit D and is hereby made a part of this bill.

Thirteenth. At some time prior to May 20, 1896, said Louis Goddu conceived the idea of an alleged improvement in the ma-

chines for driving screw threaded wire, commonly called screw nail machines, then used by the plaintiffs as aforesaid. Such improved machine was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid. Said Louis Goddu, notwithstanding his covenants and agreements contained in said contracts dated January 1, 1880 and June 10, 1889 respectively, did not give to said plaintiffs the benefit and results of his said idea and invention for such alleged improvements, but, disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea to his said son Louis H. Goddu, and perfected said alleged improvement and completed the invention therein embodied, and instructed and directed said Louis H. Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said Louis H. Goddu to apply in the name of said Louis H. as the original inventor thereof for letters patent of the United States therefor. And said Louis H., pursuant to said conspiracy, made such application, and on or about May 25, 1897, letters patent of the United States numbered 583,045 were issued to said Louis H. Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming part of said letters patent is annexed hereto and marked Exhibit E and is hereby made a part of this bill.

Fourteenth. At some time prior to July 6, 1896, said Louis Goddu conceived the idea of an alleged improvement in the slugging machines, so called, then used by the plaintiffs as aforesaid. Such improved machine was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid.

Said Louis Goddu, notwithstanding his covenants and agreements contained is said contracts dated January 1, 1880 and June 10, 1889 respectively, did not give to said plaintiffs the benefit and results of his said idea and invention for such alleged improvement, but disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea to his said son Louis H. Goddu, and perfected said alleged improvement and completed the invention therein embodied, and instructed and directed said Louis H. Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said Louis H. Goddu to apply in the name of said Louis H. as the original inventor thereof for letters patent of the United States therefor. And said Louis H., pursuant to said conspiracy, made such application and on or about May 25, 1897, letters patent of the United States numbered 583,-046 were issued to said Louis H. Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming part of said letters patent is annexed hereto and marked Exhibit F and is hereby made a part of this bill.

Fifteenth. At some time prior to August 25, 1896, said Louis Goddu conceived the idea of an alleged improvement in the loose nailing machines, so called, then used by the plaintiff as aforesaid. Such improvement was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid. Said Louis Goddu, notwithstanding his covenants and agreements contained in said contracts dated January 1, 1880 and June 10, 1889 respectively, did not give to said plaintiffs the benefit and results of his said idea and invention for such alleged improvement, but, disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea to his said son George Goddu, and perfected said alleged improvement and completed the invention therein embodied, and

instructed and directed said George Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said George Goddu to apply in the name of said George Goddu as the original inventor thereof for letters patent of the United States therefor. And said George pursuant to said conspiracy, made such application, and on or about May 25, 1897, letters patent of the United States numbered 583,044, were issued to said George Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming a part of said letters patent is annexed hereto and marked Exhibit G and is hereby made a part of this bill.

Sixteenth. At some time prior to September 19, 1896, said Louis Goddu conceived the idea of an alleged improvement in the string nail-tacking machines, so called, then used by the plaintiffs as aforesaid. Such improved machine was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid. Said Louis Goddu, notwithstanding his covenants and agreements contained in said contracts dated January 1, 1880 and June 10, 1889 respectively, did not give to said plaintiffs the benefit and results of his said idea and invention for such alleged improvement, but disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea to his said son William Goddu, and perfected said alleged improvement and completed the invention therein embodied, and instructed and directed said William Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said William Goddu to apply in the name of said William as the original inventor thereof, for letters patent of the United States therefor. And said William pursuant to said conspiracy, made such application and on or about May 25, 1897, letters patent of the United States numbered 583,048 were issued to said William

Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming part of the said letters patent is annexed hereto and marked Exhibit H and is hereby made a part of this bill.

Seventeenth. At some time prior to January 15, 1897 said Louis Goddu conceived the idea of an alleged improvement in string nail tacking machines so called, then used by the plaintiffs as aforesaid. Such improved machine was designed and intended to take the place of and do the same work as machines then manufactured by the plaintiffs according to earlier inventions made by said Louis Goddu for the essential parts thereof and improvements therein, for which divers letters patent of the United States had been duly issued which were then owned by the plaintiffs as trustees as aforesaid. Said Louis Goddu, notwithstanding his covenants and agreements contained in said contracts dated January 1, 1880 and June 10, 1889, respectively, did not give the said plaintiffs the results of his said idea and invention for such alleged improvement, but disregarding his said obligations and duties under said contracts, pursuant to the conspiracy aforesaid, communicated said idea of his son William Goddu, and perfected said alleged improvement and completed the invention therein embodied and instructed and directed said William Goddu and his brothers in relation thereto, and in constructing a machine in accordance therewith and assisted and permitted said William Goddu to apply in the name of said William as the original inventor thereof for letters patent of the United States therefor. And said William, pursuant to said conspiracy, made such application, and on or about June 15, 1897 letters patent of the United States numbered 584,735 were issued to said William Goddu upon his said application for said alleged improvement and invention. A copy of the specification forming part of said letters patent is annexed hereto and marked Exhibit I and is hereby made a part of this bill.

Eighteenth. Each of the inventions specified in the six preceding paragraphs numbered Twelfth to Seventeenth both inclusive is intended and designed as an improvement on machines now owned and used by said plaintiffs, manufactured under letters patent of

the United States heretofore issued for inventions of said Louis Goddu and now owned by said plaintiffs, pursuant to the terms of said several contracts; and each of the machines embodying said inventions specified in said paragraphs Twelfth to Seventeenth is intended to be used for the same purpose for which the plaintiffs' said machines are used and to be an improvement thereon, and to be used in competition therewith. Said Louis Goddu, in pursuance of the conspiracy aforesaid, aided and assisted his said sons in constructing the machines in said paragraphs numbered Twelfth to Seventeenth referred to, and furnished them for this purpose the use, free of expense, of a machine shop owned by him, and hired and paid a machinist to assist them in the mechanical work to be done by them and furnished and paid for all the supplies to be used in said shop in carrying on said work, and supported his said sons and the families of such of them as had families, after they respectively left the employ of the plaintiffs as aforesaid, and paid all the expenses of applying for and obtaining each of said letters patent, and expended large sums of money for the purposes aforesaid.

Nineteenth. Each of said letters patent so issued, as in paragraphs numbered twelfth to seventeenth both inclusive above set forth, is for an invention of said Louis Goddu. Louis Goddu was and is in fact the first and original inventor of the alleged improvements for which each of said letters patent was granted. Each of said inventions was and is the fruit and result of said Louis Goddu's ingenuity and inventive skill. Said Louis Goddu communicated each of his said conceptions and inventions to his said sons and to each of them, and directed and caused his said sons to construct a machine embodying said invention, and permitted his said sons William, Louis H., and George respectively as above set forth, to apply for and obtain letters patent for said respective machines in order to defeat the right of plaintiffs to the sole benefit of the results of the ingenuity and inventive skill of said Louis Goddu. Each of the said sons of said Louis Goddu was aware of at the time said Louis Goddu so communicated to him each of said conceptions and inventions, and at all times thereafter well knew the duties and obligations of said Louis Goddu to the plaintiffs

under and by virtue of said contracts, and well knew the rights of the plaintiffs to the exclusive benefit of and to the results of the ingenuity and inventive skill of said Louis Goddu; and each of said sons of said Louis Goddu and said Albert Van Wagenen wilfully and fraudulently conspired with said Louis Goddu to defeat the rights of the plaintiffs aforesaid, and for this purpose assisted said Louis Goddu in the development of said improvements; and each of them who applied for letters patent in his own name as above set forth did so well knowing that said Louis Goddu was the true and original inventor of the alleged improvements and inventions for which said patent was sought; and that the plaintiffs as trustees as aforesaid were by virtue of said contracts and of each of them, entitled to the sole and exclusive use and benefit thereof. And each of said alleged improvements and inventions in fact belonged to and in equity was the property of said plaintiffs as soon as made, conceived, or originated by said Louis Goddu, and all the acts done in relation thereto pursuant to said conspiracy as above set forth, were done in wilful violation of and in fraud of the plaintiff's rights.

Twentieth. On or about May 29, 1897, a corporation known as the Goddu Sons Metal Fastening Company was organized under the laws of Maine, with a capital of $500,000 divided into 5000 shares of the par value of $10.00 each. The ostensible purposes for which said corporation was organized as set forth in its certificate of incorporation were the carrying on the business of manufacturing, buying, selling, leasing, and operating machinery, tools, and appliances relating to the manufacture of boots and shoes, obtaining, leasing, operating under and disposing of letters patent, including letters patent relating to the manufacture of boots and shoes, and machinery, tools, and appliances used in such manufacture, and for other purposes. Among the original incorporators and directors of said corporation named in its articles of incorporation were said George Goddu, Louis H. Goddu, and Albert Van Wagenen, and one James H. Churchill, the solicitor of patents employed by said Louis Goddu. The plaintiffs are informed and believe, and therefore charge, that said corporation was organized

pursuant to said conspiracy above set forth, in order that said letters patent issued to said several sons of Louis Goddu respectively as aforesaid might be assigned to and held and used by it; that said Louis Goddu assisted in promoting and advanced all the money for the expenses of organizing said corporation, and has lent money to it; that said Van Wagenen and all said sons of said Louis Goddu were parties to said conspiracy, and joined in the organization of said corporation, well knowing the rights of said plaintiffs to all inventions of said Louis Goddu, and well knowing that the inventions for which said letters patent had issued which were to be assigned to said corporation were inventions made by said Louis Goddu; that said Louis Goddu received and still holds 3000 shares of the capital stock of said corporation; that said Van Wagenen and each of said five sons of said Louis Goddu received and still holds 6,000 shares of said capital stock; that said shares were issued to said Louis Goddu and to said Van Wagenen and to said several sons of said Louis Goddu for no consideration except the part taken by each in forming and carrying out said conspiracy and the assignment pursuant to said conspiracy of said several letters patent specified in paragraphs twelfth to seventeenth both inclusive to said corporation.

Twenty-first. Thereafter said William Goddu, George Goddu and Louis H. Goddu assigned to said Goddu Sons Metal Fastening Company, pursuant to said conspiracy, all said letters patent issued to them respectively as in paragraphs Twelfth to Seventeenth both inclusive above set forth to wit: letters patent numbered 569,152, 583,048 and 584,735 issued to said William Goddu, 583,045 and 583,046 issued to said Louis H. Goddu, and 583,044 issued to said George Goddu, in so far as, in view of the invalidity thereof, the same were capable of assignment; and said corporation has since that date purported and now purports to be, and so far as the same are capable of ownership for the reason aforesaid, now is the owner of said letters patent. At the time each of such purported assignments, and at the time of the payment of any consideration therefor, if any consideration was in fact paid, said corporation well knew that said letters patent and all of them were

granted for inventions originally conceived and made by said Louis Goddu, and that said Louis Goddu was the true and original inventor of the alleged improvements for which said letters patent were respectively granted; that said plaintiffs as trustees as aforesaid were entitled to the sole and exclusive benefit of said invention; and that said William Goddu, Louis H. Goddu and George Goddu respectively, and each of them, well knowing the plaintiffs' said rights, had conspired with said Louis Goddu as above set forth in assisting to develop said inventions and in applying for letters patent therefor, in order to defraud the plaintiffs by depriving them of the benefit of said inventions and results of said Louis Goddu's ingenuity and inventive skill.

Twenty-second. Said Goddu Sons Metal Fastening Company is about to engage in business in competition with the business carried on by the plaintiffs as trustees as aforesaid. Said several inventions for which said letters patent purported to be issued as aforesaid are for alleged improvements in machines of which the plaintiffs in carrying on said business lease large numbers to manufacturers of boots and shoes. The use of any of said inventions by said defendant corporation in competition with said plaintiffs will cause said plaintiffs great and irreparable injury. Said defendant corporation has begun or is preparing to manufacture and to lease to manufacturers of boots and shoes in competition with the plaintiffs, machines manufactured in accordance with said several alleged improvements and inventions as set forth in the specifications forming part of said several letters patent, and as the plaintiffs are informed and believe, threaten to and will unless restrained by the action of this Honorable Court, continue so to do, and will by every means endeavor to induce manufacturers of boots and shoes to hire said machines from from them instead of hiring machines for the same purposes from said plaintiffs, and will seriously injure the plaintiffs' said business, to wit, to an amount greatly exceeding in value, exclusive of interest and costs the sum of two thousand (2,000) dollars.

Wherefore and forasmuch as the plaintiffs have no adequate remedy at law for the matters herein complained of, and to the

end that the defendants may if they can show why your orators should not have the relief hereby prayed, and may make a full disclosure and discovery of all the matters aforesaid, and according to the best and utmost of their knowledge, remembrance, information and belief, full, true, direct and perfect answer make to the matters hereinbefore stated but not under oath, an answer under oath being hereby expressly waived, the plaintiffs pray : —

1. That the defendants and each of them and their respective agents, servants and employees, be perpetually restrained, from making, leasing, selling or using in any way any machine embracing, and from in any way using any of said alleged improvements and inventions or any substantial part thereof, set forth and described in the specifications forming a part of said several letters patent numbered respectively 569,152, 583,044, 583,045, 583,046, 583,048 and 584,735, and that all such machines now in the possession or custody of the defendants or any of them, or their or any of their servants, agents or employees, may be delivered up to the plaintiffs or be destroyed.

2. That the defendants and each of them be ordered to account to the plaintiffs for all profits made by them respectively from the making, leasing, selling or in any way using any machine or machines embracing said alleged improvements and inventions or any of them or any substantial part of any of them or in any way arising or accruing therefrom.

3. That a preliminary injunction issue, restraining the defendants and each of them and their respective agents or employees during the pendency of this suit, from making, leasing, selling or using in any way any machine embracing, and from in any way using any of said alleged improvements and inventions or any substantial part thereof set forth and described in the specifications forming a part of said several letters patent numbered respectively 569,152, 583,044, 583,045, 583,046, 583,048 and 584,735.

4. For such other relief as to this honorable Court shall seem meet.

And it may please your Honors to grant unto the plaintiffs a writ of subpoena ad respondendum directed to said several defend-

ants, The Goddu Sons Metal Fastening Company, Louis Goddu, Louis H. Goddu, William Goddu, Napoleon Goddu, Elmer Goddu, George Goddu and Albert Van Wagenen, and commanding them and each of them to be and appear in this Honorable Court on a day certain therein to be named, to answer this bill of complaint, and to abide by and perform such order or decree as may be made therein.

And the plaintiffs, as in duty bound, will ever pray.

JAMES W. BROOKS,
FRANK F. STANLEY,
By their Solicitors,
Brandeis, Dunbar & Nutter.

LOUIS D. BRANDEIS,
of Counsel.

(Exhibit A, referred to herein, is here inserted in the original Bill of Complaint.)

EXHIBIT B.

This agreement made the first day of January, 1880, by and between Gordon McKay and James W. Brooks, both of Cambridge, Massachusetts, as they are trustees of the McKay Metallic Fastening Association, said McKay being Principal Trustee and said Brooks Associate Trustee, parties of the first part; and Louis Goddu, of Winchester, Massachusetts, party of the second part: Witnesseth:

Whereas, said Trustees are the owners of certain patents of the United States granted for the inventions of said Goddu relating to metallic fastenings for boots and shoes, and are desirous of obtaining and securing for said McKay Metallic Fastening Association, further results and benefits from the ingenuity and inventive skill of said Goddu, in the origination and continuance of other inventions and improvements, relating to metallic fastenings for boots and shoes, or the insertion of metal in soles for any purpose, except for the purpose of lasting boots and shoes.

Now, in consideration of the promises and stipulations on the part of the said Trustees, hereinafter recited and contained, the

said Goddu does hereby covenant and agree that the said Trustees, and the survivor of them, as joint tenants, and not as tenants in common, the successor or successors to their trust, and his or their legal representatives or assigns, shall at all times exercise and enjoy the entire and exclusive right, title, and interest, in and to any and all inventions and improvements not already assigned which the said Goddu has made or may hereafter make, contrive, or originate in the construction or mode of operation of any machine, mechanism, mechanical appliance, or instrumentality relating to metallic fastenings for soles of boots and shoes or to the insertion of metal in soles for any purpose, except for lasting boots and shoes, to the fullest extent to which the said Goddu as the inventor or discoverer thereof, would have been entitled to possess, exercise, and enjoy the same within and for the United States and all other countries.

And the said Goddu hereby further agrees that in order to secure to the said trustees the entire and exclusive benefit and advantage to be derived from said inventions and improvements, he will at their request, and without charge to them, but at their expense, make, sign, and execute, any and all proper documents, and written instruments, requisite and proper to apply for and obtain the grant, reissue, or extension of Letters Patent in the United States, and such other countries as said trustees may elect, and to protect therein the exclusive rights to any of said inventions and improvements and will also make, sign, execute, and deliver any and all assignments, transfers, and conveyances necessary or proper to vest in said trustees, their successors, legal representatives, and assigns, the entire and exclusive right, title and interest, in and to each and all of such Letters Patent, reissues and extensions when granted, as fully as he could exercise and enjoy the same.

And in consideration of the premises, the said trustees for the McKay Metallic Fastening Association, for themselves, their successors, legal representatives, and assigns, agree that they will pay to said Goddu, his executors, administrators, or assigns, in successive payments, a sum equal to two and one half per cent (2½%) of all dividends declared and paid out of profits derived from the

use by them of any of his inventions in the United States, and twenty per cent. (20%) of all dividends declared and paid out of profits derived from the use of any such inventions in any other country, such percentages to continue so long as the patents or extensions thereof for said inventions run; such percentages to be paid to said Goddu when and as often as said dividends shall be paid.

And the said trustees hereby covenant and agree for themselves, the survivor of them and the successors to their trust, that in case they shall ever sell and assign either or any of the said Letters Patent for the inventions of said Goddu whether now or hereafter vested in them to any person or corporation free and discharged of their trust, and of the obligation to pay a percentage as aforesaid; they will within ten days after such sale and assignment pay to said Goddu, his executors, administrators, or assigns, the above percentages of two and one half per cent. (2½%) for the United States patent, and twenty per cent. (20%) for the foreign patents, of the entire consideration whether of money or other equivalents of value received by them for such sale and assignment.

It is, however, expressly understood and agreed that neither of said trustees nor any of their successors in the trust, nor any member of said association, shall be answerable hereunder out of his or their individual and private estates, but only out of and to the extent of the trust estate.

This agreement is made in lieu of and as a substitute for the agreement made between the same parties June 9, 1877, which is hereby terminated at the date of this agreement.

In witness whereof the said parties have hereunto set their hands and seals at Boston, Massachusetts, United States of America.

(Executed in duplicate)

GORDON MCKAY AND J. W. BROOKS, Trustees,
by Gordon McKay, Principal Trustee. [SEAL.]
LOUIS GODDU. [SEAL.]

EXHIBIT C.

This agreement made by and between Louis Goddu of Winchester, Massachusetts, party of the first part, and James W. Brooks, as Principal Trustee, and Frank F. Stanley, as Associate Trustee, of the McKay Metallic Fastening Association, parties of the second part, Witnesseth:

That whereas the said Louis Goddu owns twelve hundred and fifty shares, more or less, of the capital stock of the Goddu Improvement Company, a corporation established under the laws of the State of Maine:

And whereas the said Goddu Improvement Company has sold, assigned, and transferred, all its patents and inventions unto the said trustee of the said association;

Now, therefore, in consideration of seven thousand five hundred dollars, by the said James W. Brooks, as Principal Trustee, and the said Frank F. Stanley, as Associate Trustee, of the said McKay Metallic Fastening Association, paid to the said Louis Goddu, the receipt whereof he acknowledges, and in further consideration of the stipulations and covenants of the said James W. Brooks, as Principal Trustee, and the said Frank F. Stanley, as Associate Trustee, of the said McKay Metallic Fastening Association, hereinafter recited and contained, and of the payments from time to time hereafter to be made to him by them, their successors and assigns, as hereinafter specified, the said Louis Goddu makes the following sale and assignment, and promises, covenants, and agrees as follows:

The said Louis Goddu hereby sells, assigns, and transfers unto the said James W. Brooks as Principal Trustee and the said Frank F. Stanley as Associate Trustee, of the said McKay Metallic Fastening Association all shares in the capital stock of the said Goddu Improvement Company now owned by him, the said Louis Goddu, and all his right, title and interest whatsoever in the business and property of the said Goddu Improvement Company, including such patents for inventions as he has been under obligations to assign to it, but may not as yet have assigned.

And the said Louis Goddu hereby promises, covenants, and agrees that the said James W. Brooks as Principal Trustee and the said Frank F. Stanley as Associate Trustee of the said McKay Metallic Fastening Association, their successors and assigns, shall at all times have, exercise, and enjoy the entire and exclusive right, title and interest in and to any and all inventions, improvements, and discoveries, which he the said Louis Goddu, has made, contrived, or originated, and has not already assigned, and which during the term or terms of any patent or patents heretofore assigned by him to the Trustee of the said McKay Metallic Fastening Association under this present agreement, he the said Louis Goddu may hereafter make, contrive, or originate in any industrial art, machine, manufacture, or composition of matter (excepting only such inventions and improvements as are already the subject of other existing contracts between him the said Louis Goddu, and the Trustees of the said McKay Metallic Fastening Association, to the fullest extent to which he, as the inventor or discoverer thereof, would otherwise have been entitled to possess, exercise, and enjoy such entire and exclusive right, title and interest, within the United States, and all other patent granting countries.

And the said Louis Goddu hereby further promises and agrees that in order to secure to the trustees of the said McKay Metallic Fastening Association the entire and exclusive benefit and advantage to be devived from his said inventions, improvements, and discoveries, he will at the request of such trustees, or either of them, and without personal charge, but at their expense, make, sign, and execute, any and all papers, documents, and written instruments requisite and proper to apply for and obtain the grant of Letters Patent in the United States, and any foreign country, and any reissue or extension thereof, to protect therein, the exclusive privileges of constructing, employing, and vending the said inventions, improvements, and discoveries, or either or any of them, and will also make, sign, execute, and deliver any and all assignments, transfers, and conveyances necessary or proper to vest in the said James W. Brooks, as Principal Trustee, and the said Frank F. Stanley as Associate Trustee of the said McKay

Metallic Fastening Association, their successors and assigns, the entire and exclusive right, title, and interest in, to, and under, each and all of such Letters Patent, and any reissue or extension thereof, when granted, and the franchise and privileges secured thereby.

And the said Louis Goddu hereby sells, assigns, and transfers unto the said James W. Brooks as Principal Trustee and the said Frank F. Stanley as Associate Trustee of the said McKay Metallic Fastening Association, any and all patterns, models, and drawings which he may now or hereafter own, embodying, illustrating, or representing, either or any of the inventions, improvements, or discoveries, which by the terms of this present agreement are to belong, or by assignment from the said Goddu Improvement Company may belong, to the said Trustees of the said association.

And in consideration of the premises, the said James W. Brooks as Principal Trustee, and the said Frank F. Stanley as Associate Trustee, of the said McKay Metallic Fastening Association, for themselves, their successors, and assigns, hereby promise, covenant, and agree that they will pay to the said Louis Goddu, fourteen per centum of all dividends which shall be declared, from time to time, of the net profits arising or accruing from the practice or employment of the inventions, improvements, or discoveries, or either or any of them, claimed and secured in and by the patents granted, or to be granted, which have been assigned to the said trustees of the said association, by the said Goddu Improvement Company, and in and by such other patents hereafter to be granted, as are to become the property of the said trustees of the said association by virtue of this present agreement; and also of the net profits arising or accruing from the manufacture and sale of things embracing and embodying the said inventions, improvements, or discoveries, so patented, or either or any of them; and also of the net profits arising or accruing from the sale of the said patents or either or any of them, or from the grant of any right, license, or privilege thereunder.

And the said James W. Brooks, as Principal Trustee, and the said Frank F. Stanley as Associate Trustee, of the said McKay

Metallic Fastening Association, for themselves, their successors and assigns, hereby further promise, covenant, and agree that they will keep all the transactions and business done and carried on under and in respect to the patents and inventions derived by assignment from the said Goddu Improvement Company, and by virtue hereof from the said Louis Goddu, as aforesaid, and all accounts in relation thereto, separate and distinct from other transactions and business done and carried on and other accounts kept by the said trustee of the said association; that such expenses and disbursements as shall be incurred and made incidentally or unavoidably in connection with the entire business carried on by the said trustees of the said association, as for instance, salaries, rent, office expenditure, and so forth, shall be apportioned between the business provided for by this present agreement, and the remaining business done by the said trustees of the said association in direct ratio to the net earnings of each; and that dividends shall be declared and paid as often as once in every six months of the net profits which shall have arisen or accrued from the business provided for and contemplated in and by this present agreement.

And the said James W. Brooks as Principal Trustee, and the said Frank F. Stanley as Associate Trustee, of the said McKay Metallic Fastening Association, for themselves, their successors, and assigns, hereby further promise, covenant, and agree that if the net profits arising or accruing from the business provided for and contemplated in and by this present agreement shall during any fiscal year amount to more than seventy five thousand dollars, then, and in that event, they the said trustees of the said association will pay to the said Louis Goddu, in addition to the fourteen per centum of all dividends which shall be declared of the said net profits five per centum more upon all excess of the aggregate of such dividends for that year, over and above the said sum of seventy five thousand dollars.

And the said James W. Brooks as Principal Trustee, and the said Frank F. Stanley as Associate Trustee, of the said McKay Metallic Fastening Association, for themselves, their successors, and assigns, hereby further promise, covenant, and agree that they

will at all times keep and cause to be kept, regular books of account in which shall be entered any and all financial transactions belonging to or connected with the business provided for and contemplated in and by this present agreement, and which shall at all reasonable times be open to the inspection and examination of the said Louis Goddu or of his legal representatives.

And it is hereby expressly stipulated, agreed, and understood by and between the said parties hereto that if hereafter at any time while this present agreement continues in force, the said Louis Goddu shall make any invention which the said trustees of the said association, their successors, or assigns shall refuse to patent, upon tender of the same to them in writing for that purpose, then the said Louis Goddu upon such refusal may, at his own expense, patent the invention so refused, and may thereafter have, exercise, and enjoy the full and exclusive right, title, and interest in and to the same.

And it is also hereby stipulated, agreed, and understood by and between the said parties hereto that if the said trustees of the said association, their successors or assigns, shall at any time wilfully neglect, or refuse, to keep or perform any of their promises, covenants, or agreements herein recited and contained, then the said Louis Goddu shall thenceforth be released from further obligation in respect to any invention which he may make thereafter, but shall, nevertheless, be entitled to receive, recover, and collect, any and all dividends which shall be declared, of the net profits arising or accruing from the business done under such patents and inventions as have been derived by assignment from the said Goddu Improvement Company, and as shall theretofore have been derived from the said Louis Goddu, by virtue of this present agreement.

In testimony whereof the said Louis Goddu and the said James W. Brooks, as Principal Trustee, and the said Frank F. Stanley as Associate Trustee, of the said McKay Metallic Fastening Association, have hereunto set their respective hands and seals this tenth day of June, in the year eighteen hundred and eighty nine.

LOUIS GODDU

JAMES W. BROOKS as Principal Trustee of the McKay Metallic Fastening Association.

The word "twelve" being erased in two places and the word "fourteen" substituted therefor in each case, and the word "four" being erased and the word "five" being substituted therefor before signing, in the presence of

GEO. L. ROBERTS.

DEFENDANTS' EXHIBIT 217.

[Put in Evidence, page 3776.]

Beverly, Mass., Nov. 20, 1911.

Mr. S. Winslow, Boston Office.

Dear Sir: The following is the list of experimental machines in the various departments.

The following list was sent to Messrs. King & Fraher:

Order	Name	For the month of October	Previous	Total
K 35791	Automatic Stitcher. Redesign machine. Drawings, patterns and machine work			
	E. E. Winkley	$39.10	$1640.55	$2179.65
K 112127	Goodyear Welt & Turn Sewing Mch. Make & apply to above machine one adjustable channel guide. Drawings, patterns and machine work.			
	E. E. Winkley	105.25	1095.29	1200.54
K 121228	Sole Layer. Changes on Progressive Pressure Principle Machine. Drawings, patterns and machine work.			
	B. F. Mayo	9.74	4934.07	4943.81
K 121244	Goodyear Inseam Trimming Mch. Make one new machine Drawings, patterns and machine work.			
	W. C. Meyer	11.14	5959.01	5970.15
K 123755	Goodyear Imp. Sole Layer. Make & apply to machine Welt Supporting Device. Drawings, patterns and machine work.			
	E. E. Foster	7.34	1272.53	1270.87
K 123843	Goodyear Insole Flexing Mch. Make one machine. Drawings, patterns and machine work.			
	J. B. Hadaway	8.59	3162.96	3171.55

Order	Name	For the month of October	Previous	Total
K 137201	Goodyear Flexible Insole Mch. Make Roll Feed for Feeding Wedge Stock. Drawings, patterns and machine work.			
	J. B. [illegible]way	199.59	1586.17	1785.76
K 123684	Thread Fastening & Tack Pulling Mch. Make machine for Fastening Upper to Insole & Pulling Lasting Tack. Drawings, patterns and machine work.			
	Jas. A. Brogan	284.16	4543.12	4827.28
K 135509	Heel Seat Rounding Machine. Make new design of machine. Drawings, patterns and machine work.			
	Wm. Meyer & W. C. Baxter	196.84	3623.24	3819.18
K 135617	Heel & Forepart Turning Mch. Redesign Gardner Machine. Drawings, patterns and machine work.			
	Eppler & Erickson	105.30	4887.29	4992.59
K 135537	Inseam Trimming Machine. Make Model of an Inseam Trimming machine, also construct one machine. Drawings, patterns and machine work.			
	Andrew Eppler	185.81	2626.27	2812.08
K 146706	Welt & Turn Sewing Machine. Finish work started in June 1909 on Shoe Holder for above machine for supporting, guiding & feeding the shoe. Drawings, patterns and machine work.			
	B. F. Mayo	Cr. 3.41	703.85	700.44

Order	Name	For the month of October	Previous	Total
K 148712	Goodyear Turn Shoe Moulder. Apply to above machine Inking Device. Drawings, patterns and machine work.			
	Ralph Simmons	17.88	594.99	612.87
K 152806	Goodyear Automatic Leveller. Redesign Boot Jack Frame & such other parts as appear weak in construction. Drawings, patterns and machine work.			
	W. C. Baxter	1306.16	6682.20	7988.36
K 160788	Canvas Setting & Feather Moulding Mch. Equip same with Cutting Device.			
	A. E. Johnson	21.37	2275.68	2297.05
K 165015	Goodyear Shank Welt Skiving Mch. Changes to Skive and Rub the welt upon the upper surface. Drawings, patterns and machine work.			
	F. B. Freeman	61.00	246.93	307.93

MISCELLANEOUS

Order	Name	For the month of October	Previous	Total
		20579.29	210567.95	231147.24
K 84	This order covers work for Patent Dept. consisting of making blueprint on any prints.	27.11	2103.04	2130.15
K 109934	Welt Butting & Tacking chine. Make one Welt Butting Machine fitted with Tacking mechanism & embodying the mechanism disclosed in the Winkley & Keyes Designs. Drawings, patterns and machine work.	774.26	13377.46	14151.72
K 141794	Campbell Cyclone Lock-stitch Mach. Rotary Thread Measuring Device for above machine. Drawing dated March 16, 1910			
	Topham	7.32	890.66	897.98
K 148726	Button Hole Sewing Machine. Make drawings of one machine, and preliminary changes.			
	G. S. Hill	1277.16	10002.13	11279.29
K 157387	Last Pulling Machine. Make one complete machine. Drawings, patterns and machine work.			
	B. F. Mayo	41.47	2813.60	2855.07
K 157389	Belt Shifting Device. Equip all machines with Belt Shifting Device. Drawings, patterns and machine work.			
	H. H. Eaton	80.20	3963.73	4043.93

Order	Name	For the month of October	Previous	Total
K 160782	Corner Counter Moulding Machine. Make drawings of a machine for moulding corners of counters to conform to the insole rib. Order closed Oct. 20, 1911.			
	M. Brock	1.62	282.92	284.54
K 165047	Tip Crimping. Make model of one machine, 1st model started Nov. 2, 1910. Drawings, patterns and machine work.			
	P. J. Wentworth.	136.10	923.84	1059.94
K 169682	Cam Developing. Drawings of one Cam Developing Machine using original Sketch & construct one Device.			
	E. E. Foster	222.67	2089.08	2311.75
K 169695	Automatic Stop Device. Make one complete to be used on various machines. See X2549. Drawings, patterns and machine work. Order closed 6-2-11.			
	L. E. Topham	141.88	12402.93	12544.81
K 174661	Pulling Over Machine. Preliminary Sketches of proposed changes of various parts of U.S.M.Co. P.O. & make assembly of same.			
	W. G. Stewart	17.03	2106.51	2123.54
K 174663	Imperial Heel Breasting. Make one adjustable Last Spindle for P.H.B. for Goodyear Work. Drawings, patterns and machine work.			
	L. A. Casgrain	191.70	379.91	571.70

Order	Name	For the month of October	Previous	Total
K 174678	Measuring. Drawings of 2 machines for measuring Irregular Areas & build one.			
	John J. Heys	480.83	2715.85	3196.68
K 174680	Heel Shaping Machine. Machine for shaping Heel of upper previous to assembling. Drawings, patterns and machine work.			
	M. Brock	200.27	1215.25	1415.52
K 174684	Insole. New method of making Heel Seats of Insoles. Drawings, patterns and machine work.			
	Jas. Brogan	82.91	250.83	333.74
K 174690	Wonder Worker Grinder. Modify present construction to provide for different U.S.M.Co. fixtures. Drawings, patterns and machine work.			
	G. F. Stewart	78.72	1744.49	1823.21
K 180268	Pieced Stay Machine. Make one machine. Drawings, patterns and machine work.			
	Frederick Anderson	174.73	4018.93	4193.66
K 184047	Lasting Machine. Make Toe Lasting Mechanism embodying a 3 part Clamping Device & a movable Jack. Drawings, patterns and machine work. Order closed 10/20/11			
	Eli Brothers	545.38	2081.46	2626.84
K 190041	Lubricating. Work on lubricating of various machines.			
	M. D. Phelan	66.42	1758.58	1825.00

Order	Name	For the month of October	Previous	Total
K 190042	Speed Balancing. Make machine for balancing machines at various speeds.			
	M. D. Phelan	46.70	686.26	732.96
K 193182	Royal Perforator. Changes for Embossing. Order closed 10/3/11.			
	W. A. Smith	113.20	499.54	612.74
K 193183	Shoe Rack. Make one Shoe Rack. Order closed 10/20/11			
	James Roach.	.83	256.43	257.26
K 193195	IVI Trade Marking. Make Improved Device for Marking IVI on D. T. Wire.			
	F. H. Perry	52.28	1586.89	1639.17
K 194750	Hand Pinking Mch. Equip machine with wheel for embossing Vamps. Order closed 10/3/11			
	W. A. Smith	.20	399.57	399.77
K 194765	Ideal Clicking Machine. Work on Cast Iron Die, also 6 sp. Dies for Clicking Mch. same to have converted edge. X3001.			
	Lynch.	101.68	348.41	450.09
K 194772	Button & Button Hole Locating Mch. Drawings of one machine. X3019.			
	Enslin	231.82	714.08	945.90
K 199485	Hand Lasting Pincers. Equip Pincers with Blade to gather the stock as the jaws are closed for Lasting pur-

MEN'S SHOES ARE MADE:

Goodyear single sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart-channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

Goodyear one-half double sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

Goodyear full double sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

McKay sewed with
- One-half double sole.
- One-half double sole Fairstitched.
- Full double sole.
- Full double sole Fairstitched.
- Single sole.
- (All of above sometimes made pegged heel seats.)

McKay or mock welt with
- Single sole and welt — channeled outsole.
- Double sole and welt — channeled outsole.
- Single sole and welt — stitched aloft.
- Double sole and welt — stitched aloft.
- (All of above sometimes made pegged heel seats.)

Standard Screw
  Surface nailed.
  Channel nailed.
  Channel nailed — Fairstitched.
  (All of above sometimes made pegged heel seats.)
Pegged with
  2 and 3 — rows pegging.
  One-half double and full double sole.
Staple lasted stitchdown with
  Nailed heel seats.
  Sewed heel seats.
Stitchdown with
  Nailed heel seat.
  Sewed heel seat.
Turned with
  Nailed heel seat.
  Sewed heel seat.
Loose-nailed with
  Surface nailed.
  Channel nailed.
  Channel nailed — Fairstitched.

BOYS' SHOES ARE MADE:

Goodyear single sole and welt with
  Outsole stitched aloft all around.
  Outsole stitched aloft on forepart — channeled shank.
  Outsole stitched aloft on forepart and outside shank — inside shank channeled.
  Outsole channeled heel to heel.
Goodyear one-half double sole and welt with
  Outsole stitched aloft all around.
  Outsole stitched aloft on forepart — channeled shank.
  Outsole stitched aloft on forepart and outside shank — inside shank channeled.
  Outsole channeled heel to heel.

Goodyear full double sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

McKay sewed with
- One-half double sole.
- One-half double sole Fairstitched.
- Full double sole.
- Full double sole Fairstitched.
- Single sole.
- (All of above sometimes made pegged heel seats.)

McKay or mock welt with
- Single sole and welt — channeled outsole.
- Double sole and welt — channeled outsole.
- Single sole and welt — stitched aloft.
- Double sole and welt — stitched aloft.
- (All of above sometimes made pegged heel seats.)

Standard Screw
- Surface nailed.
- Channel nailed.
- Channel nailed — Fairstitched.
- (All of above sometimes made pegged heel seats.)

Pegged with
- 2 and 3-rows pegging.
- One-half double and full double sole.

Staple lasted stitchdown with
- Nailed heel seat.
- Sewed heel seat.

Stitchdown with
- Nailed heel seat.
- Sewed heel seat.

Turned with
- Nailed heel seat.
- Sewed heel seat.

Loose-nailed with
Surface nailed.
Channel nailed.
Channel nailed — Fairstitched.

YOUTHS' SHOES ARE MADE:

Goodyear single sole and welt with
Outsole stitched aloft all around.
Outsole stitched aloft on forepart — channeled shank.
Outsole stitched aloft on forepart and outside shank — inside shank channeled.
Outsole channeled heel to heel.
Goodyear one-half double sole and welt with
Outsole stitched aloft all around.
Outsole stitched aloft on forepart — channeled shank.
Outsole stitched aloft on forepart and outside shank — inside shank channeled.
Outsole channeled heel to heel.
Goodyear full double sole and welt with
Outsole stitched aloft all around.
Outsole stitched aloft on forepart — channeled shank.
Outsole stitched aloft on forepart and outside shank — inside shank channeled.
Outsole channeled heel to heel.
McKay sewed with
One-half double sole.
One-half double sole Fairstitched.
Full double sole.
Full double sole Fairstiched.
Single sole.
(All of above sometimes pegged heel seats.)

Surface nailed.
Channel nailed.
Channel nailed — Fairstitched.
Pegged with
2- and 3-rows pegging.
One-half double and full double sole.
Turned with
Full edge.
Thin edge.
Nailed seat.
Sewed seat.
Wood heels.
Stitchdown with
Nailed heel seat.
Sewed heel seat.

MISSES' SHOES ARE MADE:

Goodyear single sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

Goodyear one-half double sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

Goodyear full double sole and welt with
- Outsole stitched aloft all around.
- Outsole stitched aloft on forepart — channeled shank.
- Outsole stitched aloft on forepart and outside shank — inside shank channeled.
- Outsole channeled heel to heel.

McKay sewed with
- One-half double sole.
- One-half double sole Fairstitched.
- Full double sole.
- Full double sole Fairstitched.
- Single sole.

McKay or mock welt with
- Single sole and welt — channeled outsole.
- Double sole and welt — channeled outsole.
- Single sole and welt — stitched aloft.
- Double sole and welt — stitched aloft.

Standard screw
- Surface nailed.
- Channel nailed.
- Channel nailed — Fairstitched.

Pegged with

2- and 3-rows pegging.
One-half double and full double sole.
Turned with
Full edge.
Thin edge.
Nailed seat.
Sewed seat.
Wood heels.
Stitchdown with
Nailed heel seat.
Sewed heel seat.

CHILDREN'S SHOES ARE MADE:

Goodyear single sole and welt with
Spring heel — channel stitched.
Outside heel — aloft stitched.
McKay sewed with
One-half double sole.
Double sole — Fairstitched.
Turned with
Spring Heel.
Extension edge.
Underwedge.
Stitchdown with
Nailed heel seat.
Sewed heel seat.

DEFENDANTS' EXHIBIT 222.

[Put in Evidence, page 2998]

"A" VOLUME — EXPERIMENTAL.

Mr. S. W. Winslow:

IDEAS, SUGGESTIONS AND INVENTIONS SUBMITTED TO THE EXPERIMENTAL DEPARTMENT OF THE UNITED SHOE MACHINERY COMPANY FROM JUNE 23, 1904, TO DECEMBER 12, 1911, BY PERSONS OTHER THAN THOSE EMPLOYED BY THE UNITED COMPANY AS INVENTORS, WHICH IDEAS, SUGGESTIONS AND INVENTIONS HAVE NOT BEEN PURCHASED OR ACQUIRED BY THE UNITED COMPANY.

From June 23, 1904, to December 12, 1911, there was submitted to the Experimental Department of the United Shoe Machinery Company by persons other than inventors employed by the United Company, 493 suggestions and inventions which were not purchased or acquired by the United Company. Of the 493 cases 378 were submitted by persons not employed by the Company in any capacity; 115 were submitted by persons in the employ of the United Company, but not employed as inventors.

These ideas, suggestions and inventions have been submitted to us without solicitation on our part. They cover a very wide range

from the simplest device to intricate and complex mechanisms of automatic machinery. They have been submitted in the shape of verbal suggestions, sketches, models, and in some cases completed machines. Each case has had careful investigation by the Experimental Department. A very large percentage of the ideas have been submitted to the Patent Department of the United Shoe Machinery Company for their opinion, and very many have been gone over in conference by the Experimental Department, the Patent Department, and the Commercial Department which each particular idea, suggestion or invention would affect.

EXPERIMENTAL DEPARTMENT,
By JAS. CAVANAGH.

LIST OF GENERAL DEPARTMENT MACHINES SOLD OR LEASED BY THE UNITED COMPANY DECEMBER, 1911.

Beading Machine: Columbia
Beading Machine: N. M. Heel Seat — Model G.
Beveling Machine: Champion Strip — Model B.
Blacking Machine: Crest Heel — Model B.
Breasting Machine: Imperial Heel — Model B.
Breasting Machine: Heel — Model R.
Breasting Machine: Heel — Model W.
Buffing Machine — Model G.
Building Machine: Heel — Model R.
Building Machine: Pyramid Heel — Model D.
Carburetter and Pump: Improved — Model C.
Cementing Machine: Star Channel — Model C.
Cementing Machine: Star Channel — Model D.
Cementing Machine: Hub Lining — Model F.
Cementing Machine: Rapid Rotary — Model J.
Channeling Machine: Apex — Model B.
Channeling Machine — Model G.
Cleaning Machine: Booth Shaping &
Cleaning Machine: Stitch & Upper — Model M.
Cleaning Machine: Upper — Model R.
Creasing Machine: Improved Vamp
Cutting Machine: Eclipse Welt — Model G.
Cutting Machine: Eclipse Welt — Model H.
Cutting Machine: Heel Wedge — Model A.
Cutting Machine: Improved Baby Sole — Model P.
Cutting Machine: Improved Geared Sole — Model CC.
Cutting Machine: Imp. Gearless Sole — Model A.
Cutting Machine: Imp. Gearless Sole — Model B.
Cutting Machine: Imp. Gearless Sole — Model C.
Cutting Machine: Imp. Gearless Sole — Model E.
Cutting Machine: Imp. Gearless Sole — Model F.

Cutting Machine: Imp. Gearless Sole — Model H.
Cutting Machine: Imp. Gearless Sole — Model J.
Cutting Machine: Imp. Gearless Sole — Model K.
Cutting Machine: Imp. Gearless Sole — Model M.
Cutting Machine: Tap — Model S.
Cutting Machine: Welt — Model F.
Cutting Machine: Welt — Model N.
Cutting & Scoring Machine — Model D: Insole Lip.
Cutting & Scoring Machine — Model E: Insole Lip.
Dividing Machine: Carver Counter.
Edge Machine: Apex Thin — Model A.
Embossing Machine: Royal — Model A.
Embossing Machine — Model B.
Embossing Machine — Model R.
Finishing Shaft, High Stand — Model R.
Finishing Shaft, High Stand — Model S.
Finishing Shaft, Climax — Model A.
Finishing Shaft, Climax — Model B.
Finishing Shaft, Climax — Model C.
Finishing Shaft, Climax — Model D.
Finishing Shaft, Climax Sectional — Model K.
Fleshing or Randing Machine: Apex — Model A.
Fleshing or Randing Machine: Apex — Model B.
Flexing Machine: Insole — Model R.
Gauging Machine: Sole — Model R.
Gauging Machine: Sole — Model T.
Gouging Machine: Crescent Toe — Model C.
Grinding Machine: Apex — Model G.
Grinding Machine: Apex Knife — Model A.
Grinding Machine: American Slug — Model P.
Grinding Machine: Imperial — Model H.
Grinding Machine: Planet — Model A.
Hammer, New Power — Model B.
Laying Mch.: Channel — Model W.
Laying Mch.: Apex Welt — Model A.
Leveling Mch.: Acme.

Leveling Mch.: New Giant.
Leveling & Flexing Mch.: Shin — Model N.
Leveling Mch.: Atlas — Model A.
Leveling Mch.: Hercules — Model A.
Leveling Mch.: Hercules — Model B.
Leveling Mch.: Star — Model S.
Marking Mch.: Paragon Vamp — Model C.
Moulding Mch.: American Twin Sole — Model C.
Moulding Mch.: Single Sole — Model S.
Opening Mch.: Apex Channel — Model C.
Perforating Mch.: Royal — Model B.
Pinking Mch.— Model R.
Polishing Mch.: Vamp — Model R.
Press, Heel — Model F.
Press, Heel — Model S.
Press, Handy Heel — Model P.
Press, Welt — Model S.
Press, Booth Upper.
Punching Mch.: Crown Tip — Model P.
Punching Mch.: Tip — Model S.
Punching Mch.: Royal Tip — Model A.
Reducing Mch.: Apex Feather Edge & Shank — Model A.
Reducing Mch.: Apex Feather Edge & Shank — Model B.
Reducing Mch.: Rotary Feather Edge & Shank — Model H.
Reducing Mch.: Feather Edge & Shank — Model M.
Reel, Welt — Model P.
Rolling Mch.— Model F.
Rolling Mch.— Model H.
Rolling Mch.— Model R.
Rolling Mch.: Improved — Model S.
Rolling Mch.: Improved — Model EE
Rolling Mch.: Victor — Model E.
Rounding Mch.: Apex Tap & Sole — Model A.
Rounding Mch.: Heel Seat Rough — Model B.
Rounding Mch.: Planet Sole — Model D.
Rubbing Mch.: Rapid Seam — Model F.

Sanding Mch.: Top Piece — Model G.
Scarfing Mch.: Boss Spring Heel — Model B.
Scarfing Mch.: Lap — Model H.
Scarfing Mch.: Spring Heel — Model S.
Scarfing Mch.: Turn Sole — Model A.
Scolloping Mch.: Button Fly — Model R.
Scolloping Mch.: Button Fly — Model S.
Scolloping Mch.: Top Piece — Model B.
Scouring Mch.: Heel — Model R.
Scouring Mch.: Carver Heel.
Scouring Mch.: Heel Breast — Model H.
Scouring Mch.: Heel Breast — Model N.
Scouring Mch.: Tip — Model G.
Setting Mch.: Rotary Edge — Model K.
Setting Mch.: Single Edge — Model M.
Setting Mch.: Twin Edge — Model R.
Setting Mch.: Union Twin Edge — Model S.
Sewing Mch.: McKay — Sole.
Shears: Improved Pattern — Model R.
Skiving Mch.: Amazeen — Model #7.
Skiving Mch.: Counter — Model W.
Skiving Mch.: Pluma — Model D.
Skiving Mch.: Carver Vamp.
Skiving Mch.: Champion Heel Lift — Model A.
Skiving Mch.: Champion Shank — Model A.
Skiving Mch.: Counter — Model D.
Skiving Mch.: Counter — Model F.
Skiving Mch.: Counter — Model S.
Skiving Mch.: Leatherboard — Model C.
Skiving or Rand Splitting Mch.: Apex Tap — Model C.
Snipping Mch.: Booth Sandal.
Softening Mch.: Toe — Model C.
Softening Mch.: Toe — Model D.
Softening Mch.: Toe — Model E.
Splitting Mch.: Improved Rand — Model S.
Splitting Mch.: Rand — Model T.

Splitting Mch.: Centennial — Model A.
Splitting Mch.: Centennial — Model B.
Splitting Mch.: Centennial — Model D.
Splitting Mch.: Centennial — Model E.
Splitting Mch.: Centennial — Model F.
Splitting Mch.: Centennial — Model G.
Splitting Mch.: Centennial — Model H.
Splitting Mch.: Centennial — Model J.
Splitting Mch.: Summit — Model M.
Splitting Mch.: Summit — Model N.
Splitting Mch.: Summit — Model P.
Splitting Mch.: Empire — Model C.
Splitting Mch.: Cylinder — Model R.
Stamping Mch.: Eagle Sole — Model C.
Stamping Mch.: Eagle Upper — Model C.
Stamping Mch.: Regent — Model C.
Stamping Mch.— Model R.
Stand: Climax Bench.
Sticking Mch.: Shank Piece — Model B.
Stitch Mch.: Impression — Model H.
Stitch Mch.: Waukenphast Imitation — Model T.
Stripping Mch.: Improved — Model F.
Stripping Mch.: Improved — Model S.
Thin Edge Mch.: Apex — Model A.
Trimming & Stitch Rubbing Mch.: Welt — Model R.
Trimming Mch.: Apex Spring Heel — Model A.
Trimming Mch.: Edge — Model A.
Trimming Mch.: Edge — Model B.
Trimming Mch.: Edge — Model E.
Turning & Beading Mch.: Model R.
Turning Mch.: Star Rand — Model S.
Wetting Mch.: Crest Sole — Model A.
Wheeling Mch.: Booth Geared

SUMMARY OF LEASED MACHINES AS OF MARCH 1, 1911.

Heeling Department	5,408
Metallic Department	9,434
Lasting Department	12,775
Pulling-Over Department	3,627
Ensign Lacing Department	633
Eyelet Department — Power Machines	2,435
Eyelet Department — Foot Power & Miscellaneous	2,037
General Department	33,184
Goodyear Department	20,743
Total	90,276

HEELING DEPARTMENT

Bigelow Attaching Machine	14
Wood Heel Attaching	9
Velvet Box Toe Buffing	47
#4 Automatic Heel Compressing	605
Bresnahan Heel Compressing	14
Fisher Heel Compressing	3
Knox Heel Compressing	1
Compressing & Loading	7
McKay Knife Grinding	613
Monarch Skiver Knife Grinder	22
National Heeling	10
American Lightning Nailing	978
McKay Automatic Heel Loading & Attaching	943
" " " " " " "B"	5
Rapid Nailing & Automatic No. 1 and 2	60
Premier Heel Pricking	225
McKay Heel Pricking	24
Eros Rand Making	20
Monarch Counter Skiver & Finisher	58
Smith Heel Trimming	18

Busell Heel Trimming	148
King Heel Trimming	7
Spring Heel Trimming	92
McKay Heel Breast Trimming	6
Ultima Heel Trimming	482
McKay Heel Trimming & Randing	966
Tape Winding	20
Trip Rand Moulding	1
Tap & Sole Sanding	10
Total	5,408

METALLIC DEPARTMENT

Staple Belt Machine	4
Grip Clinch	173
Universal Double Clinch	103
Heel Protector Driving	40
Staple Fastening "A" " " "B" " " "C" " " "D"	887
Nurling	3
Loose Nailing	1,783
Loose Nailing No. 2.	52
Automatic Staple Nailing	1
Davey Pegging	146
Spatter Quilting	44
Ziz Slugging	3
Universal Slugging	1,789
Grip Slugging	69
Simplex Slugging	6
Champion Slugging	11
Rapid Standard Screw	398
Old Standard Screw	42
Power Welt Tacking	251
S. H. Taper Nail Tacking / D. H. Taper Nail Tacking	928

String Nail Tacking	260
Cable Tacking	281
Grip Tacking "A"	454

Referring to the statement on page 28 of the Government Petition that:

> "Among the individuals, partnerships, and corporations who were competitors of defendants and whose businesses have been so acquired and absorbed by them are the following:"

we have divided these acquisitions into certain classes showing their relative importance and bearing and the reasons which governed their purchase, as follows:

Class 1. See page 3.

Purchases made after the formation of the United Company in February, 1899, and during the years 1899, 1900, and 1901 for the purpose of settling existing litigation; one in February, 1910, for the same reason; and one to avoid infringement of patents.

Class 2. See page 9.

This class includes the purchase of the whole or a portion of the business conducted by four corporations and one partnership that had acted as agents for one or more of the three companies that went into the original organization.

Class 3. See page 15.

This class includes purchases and contracts which extended the scope of the business to include the manufacture and sale of machines of the class that have been termed "General Department" Machines. None of these machines were in competition with the business of the original organization. See page 15.

Class 4. See page 25.

Purchases which extended the scope of the business to the manufacture of "findings" and "supplies" used by its customers.

Class 5. See page 36.

Patents and Royalty Contracts to manufacture under patents.

Class 6. See page 42.

Payments made to commute obligations existing prior to 1899 under Royalty Contracts for right to manufacture under patents, and to cancel the obligation between the Goodyear Company and the Lincoln Sewing Machine Company.

Class 7. See page 45.

Employment Contracts.

Class 8. See page 50.

Miscellaneous — contracts which do not come strictly under any of the foregoing classes.

Class I.

GODDU SONS METAL FASTENING COMPANY.

At the earnest solicitation of the elder Goddu and his sons, the United Company purchased in 1899 the Goddu Sons Metal Fastening Company and the inventions owned by the Goddus individually, for the sum of $150,000; paying therefor one-half in preferred stock of the United Company at $30 per share and one-half in the common stock of the United Shoe Machinery Company at $35 per share.

This purchase was made in order to settle the long-standing litigation between the Goddus, the Goddu Metal Fastening Company, and the McKay Company.

The officers of the McKay Company claimed, and the management of the United Shoe Machinery Company believed, that such inventions as had been transferred to the Goddu Company and those owned by the Goddus, in reality belonged to the McKay Company.

The Goddu Company had no factory of its own and had done no business, but had had some machines built by outside parties.

SEAVER PROCESS LASTING COMPANY.

Purchased in 1900 at the earnest solicitation of Mr. Seaver for $38,000.

The Seaver Company was making no money and was in debt to Mr. Seaver for more than the above sum.

The principal reason for the purchase was to settle the existing litigation and because the Seaver Company had patents, or applications for patents, which it was believed stood in the way of the development of the Pulling-Over Machine upon which the United Company had been at work for some time.

The Lasting Machines of the Seaver Company infringed patents which had been issued to the Consolidated Lasting Machine Company in 1895 and 1898. Two suits had been brought for infringement of these patents and were pending at the time of the purchase.

The Seaver Company owned no real estate; leased a room at 118

South Street, Boston; had six employees. Company was insolvent at time of purchase — see Exhibit 75.

The amount paid was dependent entirely upon the royalties earned in certain factories.

GLOBE SEWING MACHINE COMPANY.

At the earnest solicitation of Mellen Bray, the United Company purchased in 1901 $599,210 worth (a control) of the issued capital stock; paying therefor $20,000 in preferred stock of the United Company.

Mr. Bray had spent a great deal of money on this enterprise; the Globe Company owed him a large sum of money, and he did not want to continue the business any further.

Suit for infringement of patents had been brought against the Globe Company by the Goodyear Company and a motion for preliminary injunction was pending at the time of the purchase.

Owned no real estate and did no manufacturing. Contracted with outside parties for such machines as it had built.

BAY STATE INTERNATIONAL SHOE MACHINERY COMPANY.

This company was purchased in 1901, at the earnest solicitation of the owners, for $25,000 preferred stock of the United Company.

Purchase was made for the account of the British and French Companies and the Bay State Machines infringed patents owned by the British Company.

The reason for the purchase was that it was believed to be the cheapest way to settle and dispose of the litigation.

The Bay State Company owned no real estate and did no manufacturing. This was a purchase of foreign patents.

As will be seen, the total purchases for the purpose of settling existing litigation prior to 1910 involved the expenditure of only $233,000, as follows:

In 1899	$150,000
In 1900	38,000
In 1901	45,000
	$233,000

For the purpose of settling existing litigation in 1910:

WENTWORTH MACHINE COMPANY.

Purchased February, 1910; amount paid $60,000.

Owned no real estate. Leased floor space in a building in Cincinnati, Ohio, and employed about twelve men.

Substantially the only machine made by the Wentworth Company was a "Heel Seat Forming Machine."

After long litigation in the Patent Office between the United Shoe Machinery Company and the Wentworth Company, and in the Courts between the United Xpedite Company and one of the users of the Wentworth Heel Seat Forming Machine, judgment was rendered in favor of the United Xpedite Company. A second suit was pending between the United Shoe Machinery Company and the Wentworth Company on another patent.

Prior to the decision of the Courts in the litigation above referred to, the Wentworth Company had many times approached the United Company to dispose of their business, and immediately after the decision they asked to open the negotiations with the United Company, which finally resulted in the purchase.

The manufacturing of the machines was removed to the Beverly Factory, from which factory the machines and parts have been supplied by the United Company.

Reason for purchase:

A great many of the machines put out by the Wentworth Company had been leased by manufacturers who were the customers of the United Company, and it was deemed much better to settle all the claims for infringement which would have resulted between the United Company and the customers of the Wentworth Company (who were also customers of the United Company) by acquiring the patents and business of the Wentworth Company, and thereby settle all the pending litigation. To avoid infringement of patents acquired the

BOOT & SHOE SOLE LAYING COMPANY

Purchased in 1899 for $45,000 cash.

This purchase was made to enable the United Company to put out a Sole Laying Machine which would be free from infringement of patents, and to obtain a type of machine that was much better

adapted for small factories than the rotary machine of the Goodyear Company, which was only adapted for large factories.

Owned no real estate. Contracted with outside parties for such machines as it had built.

After the acquisition by the United Company in 1901, the United Company continued to have machines built for it at the same outside factory for three years, since which time the machines have been built at Beverly.

CLASS 2.

This class includes the purchase of the whole or a portion of the business conducted by four corporations and one partnership that had acted as agents for one or more of the three companies that went into the original orgazination.

These purchases were made as follows:

PEARSON & BENNION, LIMITED.

Agreement of June 8, 1899, with Messrs. M. H. Pearson and Charles Bennion, of Leicester, England.

Pearson & Bennion, Limited, of England, had been for many years the agents for the Consolidated McKay Lasting Machine Company. The Shoe machinery business, other than as agents for the Lasting Machine Company, conducted by Pearson & Bennion was not in competition with the business conducted by any of the companies which entered into the original organization, or with the business of the United Company.

The agreement of 1899 with Pearson & Bennion was in reality a consolidation of the foreign business of the United Company in England with Pearson & Bennion's business, and not a purchase.

STANLEY MANUFACTURING COMPANY.

No manufacturing plant was acquired.

The United Company purchased in March, 1900, for $86,500 in preferred stock of the United Company, the store and stock of machines, parts, and supplies on hand at Frankfurt, Germany.

The Stanley Manufacturing Company was really a part of the McKay Shoe Machinery interests, and its principal business was the manufacture and sale of McKay Sewing Machines and Centennial Splitting Machines.

The store in Germany acted as the agent for the McKay Shoe Machinery Company in handling its McKay Heeling and Metallic Machines and parts, and this purchase amounted only to the acquirement of the selling agency for the goods manufactured by the Stanley Company in the United States.

No competition existed between the United Company and the Stanley Company.

The reason for the purchase was that the United Company was establishing its own German Company and the local manager for the Stanley Company's business in Germany was sick, or had just died, and the Stanley Company desired to have the United Company take over its store and stock of goods and act as agents for the Stanley Company, if the United Company was going to do its own business in Germany.

The contract, therefore, amounted simply to an agency contract, and that in itself necessitated the purchasing of the stock that the Stanley Company had in Frankfurt.

ROSS-MOYER COMPANY.

Stores in Chicago and Cincinnati.

Purchased in September, 1900, for $86,580 preferred stock of the United Shoe Machinery Company.

Manufactured General Department Machines — see Class 3.

GEORGE A. SMITH MACHINERY COMPANY.

Store in Philadelphia

Purchased in November, 1902, for $38,790.79 (inventory value).

Owned no real estate and did no manufacturing; employed one man repairing second-hand machinery.

The few special Heel Scarfing Machines sold by them were manufactured in outside machine shops.

J. K. KRIEG COMPANY.

Store in New York.

Purchased from the J. K. Krieg estate in 1903 for $97,056.52 that portion of the business of the J. K. Krieg Company with shoe manufacturers.

No competition existed between Krieg and Smith and Ross-Moyer or the United Shoe Machinery Company.

Owned no real estate. Had small machine shop above their store in New York, where they employed four men and one boy — principally in rebuilding old shoe machinery and repairing machines used in other lines of manufacturing, but when these men were not so employed they were used in building a few new machines.

REASON FOR PURCHASES:

The United Shoe Machinery Company desired to establish its own stores and offices in each one of the shoe manufacturing centers, for the purpose of furnishing a better service in connection with its machines than had heretofore been possible by each of the separate companies, and to carry a proper supply of spare parts and material used in its machines.

In order to understand the reasons governing this action a statement regarding the conditions as they existed at the date of the formation of the United Company follows:

The Goodyear Company (one of the companies forming the original organization) had its own offices and men in each of the following places:

Auburn, Maine.
Lynn, Mass.
Haverhill, Mass.
Brockton, Mass.
Worcester, Mass.
New York, N. Y.
Philadelphia, Pa.
Burlington, N. J.
Cincinnati, Ohio.
Chicago, Ill.
St. Louis, Mo.
New Orleans, La.
Rochester, N. Y.

While the McKay Company and the Lasting Machine Company (two of the three companies of the original organization) had no stores or offices of their own, the Ross-Moyer Manufacturing Company at Chicago and Cincinnati acted as agents for these two companies, carried a stock of spare parts for the Heeling, Metallic, and

Lasting Machines, and the wire used in the Metallic Machines, and such roadmen of the McKay and Lasting Machine Companies as were in these territories called at Ross-Moyer's for their mail.

These same conditions existed with:

George A. Smith Machinery Company in Philadelphia
and J. K. Krieg Company, New York, N. Y.

In Brockton, Heeling and Metallic parts were carried by the Brockton Stay Company and the Lasting Machine parts were carried by the T. A. Norris Machine Company.

In Haverhill, Heeling was with C. P. Bullen, and Metallic and Lasting were with J. W. White.

In Lynn, Heeling and Metallic and Lasting with H. W. Colbath.

None of the business done by either Ross-Moyer, Smith, or Krieg was in competition with the business of the United Shoe Machinery Company, and as the United Company decided to establish its own stores, these concerns would necessarily lose the business which they had done acting as agents for the various companies, and it formed such a large portion of their whole business that they desired to have the United Company take over all their business relating to shoe machinery, or supplies, when the United Company was ready to establish its own offices.

With the purchase of the Ross-Moyer Mfg. Co. the United Company first acquired any interest in so-called "General Department Machines"— see Class 3.

An additional reason for the purchase of Ross-Moyer was to secure the services of Mr. Samuel Ross, who had been long associated with the McKay Company and was an experienced shoe machinery man and well liked by the trade. The United Company desired to secure his services to represent their interests throughout the middle west.

The United Company now have their own stores and offices where they carry spare parts and supplies and maintain a corps of experts to furnish service in connection with their machines, at the following places in the United States:

Auburn, Maine.
Haverhill, Mass.
Manchester, N. H.

Lynn, Mass.
Brockton, Mass.
Marlboro, Mass.
New York, N. Y.
Philadelphia, Pa.
Harrisburg, Pa.
Rochester, N. Y.
Lestershire, N. Y.
Cincinnati, Ohio.
Chicago, Ill.
Milwaukee, Wis.
St. Paul, Minn.
New Orleans, La.
St. Louis, Mo.
San Francisco, Cal.

CLASS 3.

This class includes purchases and contracts which extended the scope of the business to include the manufacture and sale of machines of the class that have been termed "General Department" Machines. None of these machines were in competition with the business of the original organization.

The following list of purchases and contracts belong in this class:

ROSS-MOYER MANUFACTURING COMPANY (see also Class 2).

As stated in Class 2, this company was acquired by the United Company in September, 1900, and, as stated therein, with this purchase the United Company first acquired any interest in so-called "General Department" Machines, consisting of Edge Setters, Edge Trimmers, Heel Scourers, Buffing Machines, Rolling Machines, etc.

Owned no real estate. Leased floor space in Cincinnati, Ohio, where it employed thirty-five men. Business was continued for a number of years and then removed to the factory of the United Company at Beverly.

None of the machines manufactured by this company were in competition with any machines made by the United Company.

SWAIN-FULLER MANUFACTURING COMPANY.

This property was acquired at the solicitation of Mr. Fuller, who

was the principal owner and desired to go out of shoe machinery business.

Purchased in February, 1901, for $13,201.92, of which $2,576.92 was cash and $10,625 preferred stock of the United Shoe Machinery Company.

Owned no real estate. Leased small amount of floor space in Boston; employed less than ten men.

After the purchase the United Company transferred the manufacturing to its own factory and continued the manufacture and marketing of its machines.

By this purchase the United Company secured the "Single Sole Moulding" Machine and the "Star Leveling" Machine. The "Star Leveling" Machine was covered by patents and was a hand controlled machine adapted for leveling welt or turned work, and was especially adapted for use in small factories where the Goodyear Automatic Leveler was too large and expensive.

Neither of these machines was in competition with any machines then being made by the United Company.

GEORGE W. EMERSON COMPANY (Partnership).

This property was acquired at the earnest solicitation of George W. Emerson, who was interested in a trout farm on Cape Cod and desired to retire from the shoe machinery business.

Purchased in December, 1902, for $41,500. This amount was based upon the inventory of the Emerson Company.

The United Company desired to obtain the services of William R. Sampson, who was familiar with the business of manufacturing Leveling Machine forms and moulds. Certain litigation was pending between the Xpedite Company and the Emerson Company for infringement of the Xpedite patents. Under these circumstances the United Company entered into the negotiations which led to the purchase at the suggestion of Mr. Emerson of the Emerson Company.

Owned no real estate. Leased two floors in a factory building in Lynn and employed about thirty-five men.

After the purchase the United Company transferred the manu-

facturing to its own factory and continued the manufacture and marketing of its machines.

The greater part of the business of the Emerson Company consisted in the manufacture of lasts and forms and dealing in second-hand machines, repairing machines, and millwright work.

T. A. NORRIS MACHINE COMPANY.

Owned no real estate but operated a small machine shop employing about ten men, in which it did general machine shop work, repairing shoe machinery, and also built a few minor machines. This machine shop was located in a building at 74 Commercial Street, Brockton, owned by T. A. Norris personally, in which building the United Company then had its Brockton headquarters and repair shop under lease from T. A. Norris.

Purchased in 1902 upon the basis of inventory — $11,526.78 — at solicitation of Mr. Norris, who was heavily interested in real estate. The United Company desired to increase the amount of space leased from Norris and he desired to close out his business, as he had gone quite heavily into real estate and was owing considerable money in connection therewith.

As a matter of fact, this purchase only amounted to the buying of a lot of second-hand machines.

After the purchase the United Company continued to operate the machine shop so long as the United Company continued to have its headquarters in the Norris building.

Later, when the United Company moved its headquarters to its new location in Brockton, the machine shop was moved to the new location and is still operated as a repair shop.

The United Company continued the manufacture of the various small machines which had been made by the Norris Company, although most of the manufacturing of the new machines has been moved to the Beverly Factory.

BOOTH BROTHERS COMPANY.

Partnership composed of Quentin W. Booth and Irving E. Booth.

Owned no real estate. Leased floor space in Rochester, N. Y., and employed twenty-two men.

Purchased in 1907 for $71,284.20.

This business was acquired at the solicitation of Booth Brothers. The reason given by them for soliciting the United Company to purchase their business was that Quentin W. Booth wished to retire from business and Irving E. Booth did not care to attempt to run the business alone, but did not wish to retire.

The Booth Company manufactured the "Victor" and "Columbia Beading" Machines (both patented machines) and the United Company had acted as agents in selling many of them. The two other principal machines made by them were the "Fudge Edge" Machine and "Impression Stitch Burnishing" Machine.

The United Company felt that it could add the manufacture of these machines to its line to advantage, and therefore were persuaded to make this purchase, and a corporation was formed of which Irving E. Booth was made the manager and the manufacture was continued in Rochester, and through the Booth Company the United Company continued to put out all the machines that were previously manufactured by Booth Brothers.

The average number of employees the last three or four years has been about twenty.

CARVER COTTON GIN COMPANY.

Purchased in 1908 for $16,883.79.

The United Company acquired no real estate or manufacturing plant with this purchase, which consisted entirely of patents, stock in trade, patterns, jigs, etc.

This property was acquired at the solicitation of Mr. Hobart, Treasurer of the Carver Cotton Gin Company. The shoe machinery business done by the Carver Cotton Gin Company was a small side line to their regular "Cotton Gin" business, and Mr. Hobart stated that they had been drawn into the manufacture of shoe machinery inadvertently; that their main business was increasing to such an extent that they were getting short of factory room and did not want to add to their factory to take care of it.

The principal machines made by the Carver Cotton Gin Company were the "Gilmore Buffer," "Acme Leveler," and "Cylinder Splitting Machines."

The principal reason on the part of the United Shoe Machinery Company for making the purchase was to obtain the special tools and patterns for manufacturing these machines. The United Company had always been on friendly terms with the Carver Cotton Gin Company and had sold such machines as they made when desired by the trade, and the price paid above the inventory value for the machines on hand was less than it could have duplicated the patterns, tools, etc., which the Carver Cotton Gin Company desired to sell.

The United Company continued the manufacture of the machines acquired from the Carver Cotton Gin Company at its Beverly Factory.

The United Company did not seek to make any of the foregoing purchases in this class. They were all made at the solicitation of the various parties and for the reasons given in each case.

A list of competitive manufacturers of the principal "General Department" Machines is attached hereto, and while there are many machines that perform minor operations in the manufacture of shoes which are included in the "General Department" of the United Company, and many competitive manufacturers, only the list covering the principal "General Department" Machines is given.

THE PRINCIPAL "GENERAL DEPARTMENT" MACHINES.

CLASS 4.

This class includes purchases and contracts which extended the scope of the business to include the manufacture of certain findings and supplies used by its customers. The following list are included therein:

TIMOTHY A. BRESNAHAN
BOSTON SHOE TOOL COMPANY

Purchased in 1899 for $72,019.50. The business was the manufacture of forepart cutters and edge irons. The United Company manufactured none of these tools.

The Boston Shoe Tool Company (which was owned by T. A. Bresnahan) owned its factory, which was located in South Boston, and which employed about ninety men.

The United Company acquired this property and the business was continued at the same plant for a considerable period of time. Subsequently, for convenience and economy of manufacture, the business was transferred to the Beverly Factory, where the United Company has ever since continued and increased the business.

GLOBE SHOE TOOL COMPANY.

Purchased in 1899 for $30,000 cash. Did a business similar to the Boston Shoe Tool Company and was acquired at the earnest solicitation of parties interested and because we desired to obtain the services of Mr. Loomer as the head of the department for manufacturing these goods.

Owned no real estate. Carried on its business in floor space which it leased in Boston; employed about twenty-eight men.

Soon after its acquisition the business was transferred to the factory of the Boston Shoe Tool Company in South Boston.

BOSTON BLACKING COMPANY.

One-half interest purchased in 1900 for $280,000 (preferred stock of the United Company).

The business was the manufacture of stains, blackings and cement. The United Shoe Machinery Company did no business in this line.

The reason for purchase was that the owners of the Boston Blacking Company desired to enlist the cooperation of the United Shoe Machinery Company, and the men that it employed, to help in distributing their goods.

BOSTON FAST COLOR EYELET COMPANY }
ENAMEL EYELET COMPANY }

Purchased in 1900 for $230,000 worth of preferred stock in the United Fast Color Eyelet Company, and $35,000 in cash.

Owned no real estate and did no manufacturing; contracted with outside parties to manufacture its eyelets.

The Boston Fast Color Eyelet Company manufactured celluloid eyelets.

The Enamel Eyelet Company were really doing no business; they had on hand a small amount of eyelets and owned some patents.

The division of the preferred stock, as stated in the Bill filed by the Government, in payment for these two companies was purely an arbitrary one and at the request of the vendors, Messrs. Kempshall, King, and Tolman.

The United Shoe Machinery Company was not interested in the manufacture of eyelets at the time that this purchase was made.

J. C. RHODES & COMPANY.

Purchased in 1901 for $200,000 cash and $575,000 in preferred stock of the United Shoe Machinery Company.

Owned its own real estate and factory at New Bedford, Mass., employing about one hundred and sixteen men.

Since the purchase of the business the United Company has increased the factory facilities by building a large new factory.

This company was an old, established eyelet-making concern and manufactured an enamel eyelet called the "Perfection" eyelet, and a medium grade eyelet.

The Boston Fast Color Eyelet Company and J. C. Rhodes & Company gave the United Company a line of shoe eyelets to supply the various manufacturers who manufacture high-class shoes and medium shoes.

(It should be understood in this connection that there were many other manufacturers of eyelets, including the Atlas Company of

Fairhaven, and that the "Fast Color" eyelets and the "Perfection" eyelets were manufactured under patents.)

THE MORLEY BUTTON MANUFACTURING COMPANY.

The United Company acquired no real estate or manufacturing plant with this purchase.

The purchase price for the eyelet business of the Morley Button Manufacturing Company was $31,000. This purchase was made in 1901 as the best method of settling the litigation then existing between the J. C. Rhodes Company and the Morley Company for infringement of patents owned by the Rhodes Company, and was believed to be a fair and equitable settlement of the existing situation, and by it the Rhodes Company acquired certain patents on eyelets which were valuable to it.

The principal business of the Morley Button Manufacturing Company was the manufacturing of buttons, which business it has continued ever since; the eyelet business was a very small part of its total business.

MARLBORO AWL & NEEDLE COMPANY.

Owned no real estate. Leased floor space in Marlboro, where it employed twelve men.

Purchased in 1902. (Paid $16,300 in preferred stock of the United Awl & Needle Co.)

This company manufactured awls for Pegging Machines, hand awls, McKay needles, and rawhide mallets, none of which articles were manufactured by the United Company. The business was purchased and a small company was formed called "The United Awl & Needle Company," and the business was transferred to a factory owned by the company in West Medway, where the business has been continued ever since and has employed twenty-eight or thirty men.

S. A. FELTON & SON COMPANY.

The United Shoe Machinery Company purchased a half interest in this business in 1902 for $39,000.

At the time of this purchase (of one-half interest in this company) the S. A. Felton & Son Company owned no real estate, but occupied

a factory located at Manchester, N. H., which they leased. Employed at that time about forty men.

Business has been continued at Manchester, N. H., and very much enlarged; at present employs about two hundred and ten men. The Feltons still continue to manage the business.

Prior to the purchase of one-half of the business the United Company had been acting as agents in the sale of the Felton brushes, and the Feltons desired to interest the United Company in the manufacture of the brushes, as well as the sale, and this led to the arrangement stated above.

W. W. CROSS COMPANY.

This company was formed in 1902 as an incorporation of the business of W. W. Cross & Company — a privately owned business of Mr. W. B. Cross, who owned the factory in Brockton, and employed at that time about forty men.

Mr. W. B. Cross, the manager of the W. W. Cross Company, had been manufacturing for many years substantially all of the tacks that were sold by the Consolidated and McKay Lasting Machine Companies and continued to manufacture for the United Company; in fact, although there was no contract between the parties, this business had been considered a part of the United Shoe Machinery Company's business, as the United Company sold practically the entire output of the factories.

The formation in 1902 of the W. W. Cross Company was simply for the purpose of enabling the Cross Company to extend their business and fix permanently the relations between the company and W. B. Cross, the manager of the manufacturing end of the business, and because more capital was needed in the business. The United Company contributed $50,000 new capital at this time.

The new corporation formed took over the real estate and factory, and the business has grown very much since that date; number of employees at the present time being about three hundred and seventeen.

F. G. FARNHAM BRUSH MANUFACTURING COMPANY.

Owned no real estate. Leased floor space in a small factory in Honesdale, Pa.; employed six men.

Purchased in 1904 for $25,915.32.

This company manufactured chiefly a tampico brush for the cut glass trade, but it also put out a few brushes for the shoe trade. The amount of business done by this company was so small — owing apparently to its geographical location — that it desired to dispose of its business. It was the owner of various patents which were believed by the United Company to be valuable in the art of brush making that should enable the owners to manufacture a better brush than the United Company were then furnishing to the trade as manufactured by the Felton Company. Being anxious to obtain the best possible brush for the trade that it supplied, it purchased this business at the earnest solicitation of the officials of the Farnham Company and transferred the property to the Felton Company.

Business was continued at Honesdale for nearly a year and was then removed to the factory of S. A. Felton & Son Company, where the business has been continued.

In this connection it should be understood that the total brush business done by the Felton Company, or the United Company, is very small compared with the total brush business of the United States, although it is true that the Felton Company does manufacture a very large proportion of brushes for the shoe trade.

AMERICAN GLUE COMPANY.

This was merely a contract entered into in 1904 (terminable upon three months' notice by either party) for the exclusive agency of certain products of the American Glue Company. The United Company made no goods of a similar character, but has marketed a large amount of goods for the American Glue Company under this contract.

The United Company has no interest whatever in the American Glue Company.

KIMBALL & HADLEY.

Purchased in 1904 for $4,750.

Owned no real estate. Leased small floor space in a building on Central Avenue, Lynn; employed two men and two boys.

Kimball and Hadley were partners manufacturing principally

Goodyear needles and awls. This purchase was made at the earnest solicitation of Hadley, and its principal value would appear to be to enable the Company to furnish the particular kind of needles, etc., that were made by Kimball & Hadley.

After the purchase the United Company continued to manufacture the goods produced by Kimball & Hadley (and to supply them at the same prices that had been charged by Kimball & Hadley) until the machinery was moved to another factory and the United Company has continued to supply the demand for these goods.

METALLIC HEEL & COUNTER COMPANY.

Manufactured metallic heels and counters.

Owned no real estate. Leased floor space on Purchase Street, Boston; employed about seventy men.

Purchased in 1906 for $52,320.24 cash and $67,500 in the royalties payable on account of the Ensign (Smith) Lacing Machine.

The purchase of the Metallic Heel & Counter Company was made in connection with the purchase of the Smith Lacing Machine Company. The Metallic Heel & Counter Company owned a part of the Smith Lacing Machine Company and it was impossible to purchase the Smith Lacing Machine Company without acquiring this business. There would, however, appear to be no reason why the United Company should not purchase it, as they were not making any articles which were in competition with it.

A very substantial reason for acquiring this company and the Smith Lacing Machine Company was to secure the undivided services of George Warren, J. B. Hadaway, and William Gordon, who were already in the employ of the United Company in other matters. Messrs. Warren and Hadaway are members of the United Company's Experimental Committee.

Business was continued at Purchase Street location about one and a half years after the purchase, and then for economy of manufacture the machinery was moved to the Beverly factory of the United Company, where the company has continued to manufacture all the goods previously manufactured by this company.

ELLIS LACER COMPANY.

Purchased in 1910 for $125,000.

Owned no real estate. Leased floor space at 4 Walnut Street, Haverhill, Mass. ; employed about twenty men.

The Ellis Lacer Company were manufacturing, and had been for many years, wire laces for temporarily securing together the eyeletted edges of the uppers of laced boots while being lasted. The United Company were not making any wire laces at the time this company was acquired, but it had owned the patent issued in 1900, which was infringed by the lacers put out by the Ellis Lacer Company.

The Ellis Company upon being notified that they were infringing patents owned by the United Company, entered into negotiations with the United Company to purchase their business. In view of the fact that the Ellis Company had built up a substantial business, it was deemed fair by the United Company to purchase the business rather than enter into litigation with the Ellis Company.

Some time after the purchase, for convenience and economy in operation, the manufcturing was removed to the Beverly Factory and the manufacture of the goods has continued up to the present time.

B. F. STURTEVANT COMPANY.

Purchased in 1910 for $52,185.94; this price being based upon the inventory.

Owned real estate at Conway, N. H., where it operated a factory for the manufacture of pegwood and wood shanks. Number of men employed about twelve.

Business has been continued by the United Company at the same place and number of men employed remains substantially the same.

The United Shoe Machinery Company was not manufacturing either pegwood or wood shanks at the time it made this purchase, or prior thereto.

Class 5.

This class includes Patents and Royalty Contracts to manufacture under patents.

None of these parties owned real estate; no manufacturing plant

of any kind was acquired from them, and each contract related entirely to patents.

BREACH MANUFACTURING COMPANY.

The United Company entered into the contract with Breach in 1899, paying him $10,000, in the hope that a machine to cut the uppers of shoes could be developed under the patents owned by the Breach Company. In this endeavor the United Company expended about $30,000 and then gave up the attempt.

The United Company had no machine that competed with Breach.

No manufacturing plant of any kind was acquired.

E. T. FREEMAN.

Patents on Slugging Machines purchased in 1899; paid $11,000 and agreed to pay $4,000 in annual payments of $500 each.

The reasons leading to the purchase of these patents were to enable the United Company to improve its Slugging Machine, to avoid infringement of the Freeman patents, and to dispose of the question as to who was the real inventor of the invention claimed under Ser. No. 670,377 (filed February 15, 1898), whether Casgrain (one of the United Shoe Company's inventors) or Freeman.

No manufacturing plant of any kind was acquired.

A. G. BREWER.

Application for patent issued as No. 645,994 — improvement in Power Heel Breasting Machines.

Agreement 1899. Paid $250 cash and royalty of $5 on each machine embodying invention. Total royalties paid to Brewer $3,495.

This patent enabled the United Company to manufacture a commercially successful Power Heel Breasting Machine.

While this patent enabled the United Company to make a successful machine, Brewer could not have put his invention on the market without infringing patents owned by the United Company.

No manufacturing plant of any kind was acquired.

WINKLEY AND PHILLIPS.

By the agreement entered into March, 1900, between the United Company and Winkley and Phillips, the United Company exercised the option which had previously existed between the Goodyear

Company and Winkley and Phillips to take the exclusive right to the use of certain patents which had been transferred by Winkley and Phillips in 1898 to the Goodyear Company.

Winkley and Phillips under certain rights reserved to them for this purpose in 1898, had been embodying these patents in a Leveling Machine, with the full understanding with the Goodyear Company that, if a commercially successful machine was produced, the Goodyear Company were to have the exclusive right to use same upon proper compensations being paid to Winkley and Phillips; the amount of this compensation to be mutually agreed upon if such machine was produced.

The contract of March, 1900, was the result of this arrangement.

The United Company agreed to pay the vendors $20 for each machine put out by the Company.

No manufacturing plant of any kind was acquired.

W. J. YOUNG.

Purchased in 1902, for the British United Company and the German Company, Young's foreign patents and patent rights covering a Heel Compressing Machine.

Prior to the purchase those companies had been acting as agents for Young, but under the German law it was necessary that the machine should be made in Germany, and as the machines made by Young were not well made, customers had complained regarding their quality.

No manufacturing plant of any kind was acquired.

The William J. Young Machinery Company is in active competition in the United States and always has been.

JOSEPH P. CURTIS.

Purchased in 1903 patents covering Vamp and Lining Cementing Machine. Paid $500 cash and a royalty of $10 on each machine embodying the inventions.

The United Company had no machine of the kind at this time.

The United Company built ten or more of the machines, but they were not commercially successful.

The Peerless Machine Company, under patents owned by them,

were able to produce a better machine and have done the larger part of this business.

No manufacturing plant of any kind was acquired.

ARNOLD MACHINE COMPANY.

Patents for a machine for coating innersoles with cement. Purchased in 1904 for $500 and royalties to be paid on machines when put out.

This investment was unprofitable because a prepared canvas, manufactured and supplied by the Clifton Manufacturing Company and others, made the use of such a machine unnecessary.

No manufacturing plant of any kind was acquired.

LEOPOLD J. CORTEAU.

Patent No. 891,912, covering means for cementing lingings to uppers prior to the stitching operation. Agreement in 1904 to pay royalty of 10 per cent of the selling price until $1000 had been paid.

An experimental machine was built, which proved to be unsuccessful and Corteau was unable to make it commercially successful, although his suggestions were all tried out by the Company.

No manufacturing plant of any kind was acquired.

BOOTH BROTHERS (1904 contract)

Purchased in 1904 patents relating to Perforating Machines. Paid $2400 cash and royalty of $15 United States and $10 Canada.

United Company had no machines for doing this work.

No manufacturing plant of any kind was acquired.

BEAUDRY.

Patents relating to Heel Finishing Machines. Purchased in 1906 for $12,500 for account of, and assigned to, the United Xpedite Finishing Machine Company.

Reason for purchase was that it was believed at the time that it would enable the United Xpedite Company to improve its machines very materially. Beaudry had been the original inventor of the machine put out by the Xpedite Company.

As a result of a great many experiments made after the purchase of the patents, this money was wasted.

No manufacturing plant of any kind was acquired.

HARRY L. RICE AND FRED LACHAPPELLE.

Purchased in 1909 for $11,500.

This transaction comprised the purchase from Rice and LaChappelle of inventions embodying means for "working an additional thread into the usual chain stitch" employed in a Welt Sewing Machine, and also the following patents:

Des.	33,014	July 24, 1900	Design for a Welt Strip
	734,819	July 28, 1903	Sole Leather Cutting Machine
	734,820	July 28, 1903	Welt Support
	749,719	Jan. 19, 1904	Machine for Feeding Welts

Reason for purchase:

Mr. Rice made it a condition of the purchase of the Richardson Machine that the United Company should take over his rights in these inventions at a reasonable price because "he wanted to get out of the shoe machinery business entirely."

See Howard's statement, especially in regard to misstatement by Government regarding the covenant of the vendors regarding future inventions and patents.

No manufacturing plant of any kind was acquired.

CLASS 6.

Payments made to commute obligations existing prior to 1899 under Royalty Contracts for right to manufacture under patents and to cancel the obligation between the Goodyear Company and the Lincoln Sewing Machine Company.

LINCOLN SEWING MACHINE COMPANY.

Owned no real estate and no manufacturing plant of any kind was acquired.

Under date of April 6, 1900, the United Company paid to the Lincoln Sewing Machine Company $2,450 and 1225 shares of Common Stock in cancelation of all rights to payments of any sort or kind under the terms of an agreement entered into between the Goodyear Company and the Lincoln Company, under date of November, 1897.

This contract required the Goodyear Company, and therefore the United Company, to pay a sum of money to the Lincoln Com-

pany, which amount varied from 3% to a possible 7% per annum for forty-nine years, on $60,000.

Payment based upon the amount of dividends paid, or to be paid, by the Goodyear Company.

Reason for cancelation was to avoid the necessity for maintaining the Goodyear Company as a separate organization and to transfer the Goodyear Company's property to the United Company.

The United Company acquired no business whatever from the Lincoln Company. It simply paid for the cancelation of a contract existing between it and the Goodyear Company.

Note: This is entirely contrary to the statement in the Government Petition.

ZACHARY T. FRENCH.

Owned no real estate and no manufacturing plant was acquired in connection with this contract.

By contract dated January 1, 1904, (executed June, 1904) the United Company agreed to pay French $15,000, payable in ten annual payments of $1500 each, in full payment of royalties due him under royalty agreements, dated December 19, 1893, December 19, 1895, and January 2, 1899, between said French and the Goodyear Company.

French had no business of his own, but had been for thirty years in the employ of the Goodyear Company, or its predecessors. At the time this contract was made French was in the employ of the United Company as superintendent of its Goodyear Department Factory, Albany Street, Boston.

Reason for agreement to assign future inventions and not to compete with the United Company for ten years, was because French desired to leave the Company's employ and to have his royalty contracts (which were entirely dependent upon the number of machines that might be put out) placed upon a definite basis of annual payment.

Reason for French's leaving the Company's employ was because he did not care to leave Boston and go to the new factory at Beverly.

Class 7.

Employment Contracts.

PETER A. COUPAL AND WILLIAM GORDON.

In August, 1899, the United Company purchased the business of Gordon, Coupal and Company (a partnership), paying therefor the sum of $10,799.25, the value of their inventory — see Government Exhibit No. 66.

The business of the partnership was "repairing and building machinery and jobbing."

Owned no real estate, but leased floor space at 19 Columbia Street, Boston, and employed about twenty men.

Soon after the purchase the machinery was removed to one of the United Company's factories and the business was continued in conjunction with the other business of the company.

Reason for the purchase:

Both Gordon and Coupal were in the employ of the Goodyear Company prior to, and at the time of, the organization of the United Company and the United Company desired to obtain all their time free from outside matters.

Gordon remained in the Company's service until his death, February 16, 1912.

Coupal only remained in the Company's service a few months

The payment above referred to was for the equipment of the machine shop and for certain patents. (See Howard's statement.)

GEORGE W. FREEMAN.

Owned no real estate, did no manufacturing, and employed no men.

George W. Freeman is the son of Edwin T. Freeman, from whom certain patents were purchased in October, 1899. As this transaction left the son, George W., without a job, his father asked the Company to take the son into its employ for at least one year at a compensation of $800.

Freeman has remained continuously in the employ of the Company as a roadman and now receives $1200 per year. He has never made or assigned any inventions to the Company.

It was undoubtedly in view of the fact that he had been associated

with his father in experimental work, and on account of the possibility of his setting up some claim to the inventions assigned by his father, that the covenants in regard to competition and future inventions were made a part of the contract for employment of George W. Freeman.

The statement in the Petition of the Government that the United Company acquired any interests relating to shoe machinery, are erroneous.

FRED H. PERRY.

Owned no real estate, did no manufacturing, and employed no men.

Contract January, 1904.

Mr. Perry entered the employ of the United Company in February, 1900, as a machinist.

In July, 1902, Perry was made a foreman of machinists in the Experimental Department.

He resigned this position May 1, 1903, and made application to be employed as an inventor.

He had shown some ability in this direction, and after careful consideration, because of the expense that would be involved in trying out some of his ideas, Mr. Perry was given a chance at $30 a week for the first eighteen months of his employment. July 1, 1905, his salary was advanced to $2,000 per year; January 1, 1906, to $3,000; January 1, 1910, to $3500; and January 1, 1911, to $4,000.

Mr. Perry has developed into a very successful inventor.

Reason for contract:

In view of the many thousands of dollars that are spent annually by the Company on experiments which prove unsuccessful, there would appear to be no occasion for explaining the necessity for a contract with a man employed as an inventor.

JOSEPH W. LEARY.

Owned no real estate, did no manufacturing, and employed no men.

Employment Contract January, 1904.

Joseph W. Leary was carrying on a small sale business, principally in supplies, cements, blackings, stains, and second-hand machinery

used in the Stitching Room, and acted as agent for the Amazeen Skiving Machine which was being sold by the United Company.

Mr. Leary had proved himself to be a first-class salesman and the United Company desired to employ him to give his time especially to the sale of this particular machine, as he was an expert as a Skiving Machine man.

Mr. Leary stated that he would like to enter the employ of the United Company if the Company would buy his stock of cement and second-hand machinery, and the Company paid him $3052 for the small stock that he had on hand.

JOHN H. RICHARDSON.

Owned no real estate, did no manufacturing, and employed no men.

In December, 1908, John H. Richardson entered the employ of the United Shoe Machinery Company for a period of one year at a salary of $2500; is still in its employ.

Mr. Richardson had been the general manager of the Richardson Company and was not satisfied with his position, or the business done by that company, and had been influential in bringing about the sale of that company to the United, for the reason that the business was so small that it would hardly make more than a bare living for him.

He is at present in charge of the General Department of the United Company and his salary has been repeatedly raised.

Reason for making contract was because Richardson was an inventor having executive ability, and it was expected that he would be advanced to a very important position with the Company.

In view of these facts, it seemed proper to safeguard the Company if it expected to gradually promote Mr. Richardson to an important position in its executive forces.

Class 8.

Miscellaneous — Contracts which do not come strictly under any of the foregoing classes.

CORRUGATED WIRE FASTENING COMPANY.

Purchased in 1899 for $12,750.

This company was purchased at the earnest solicitation of the owners; the business of the Company having become unprofitable, and at the price paid it was believed a small profit would result before the business entirely disappeared.

Owned no real estate. Leased a small room on South Street, Boston, where it employed two or three men.

Such small business as it did was transferred to the factory of the United Company.

AMERICAN SOLE LAYING COMPANY.

Purchased in 1902 for $5,200.

This company was purchased at the solicitation of Mr. Fuller, who was the principal owner and desired to spend his time in the South, and because the United Company desired to secure rights under patent #384,893, in order to develop the Atlas Leveling Machine, and also because it was feared that the new pad for the Improved Sole Laying Machine would infringe patent #376,406.

Owned no real estate and did no manufacturing. Contracted with outside parties for such machines as it had built.

JOHN RITCHIE
THE JOHN RITCHIE COMPANY

November, 1899, the United Company acquired from John Ritchie and the John Ritchie Company certain Metallic Fastening Machines and also machines for manufacturing standard screw wire, and then leased back to the Ritchie Company the Metallic Fastening Machines, and John Ritchie and the Ritchie Company contracted with the United Company that they would not manufacture any wire fastening machines, or machines for manufacturing wire fastenings.

The reason for this contract and purchase was to prevent manufacturers who held Metallic Machinery under lease from the United Company (and who had agreed to purchase their metallic fastening material from the United Company), violating their leases and contracts by purchasing material from Ritchie.

Ritchie was not manufacturing, dealing in, or selling Metallic Fastening Machines, or shoe machinery of any kind, but he was assisting certain lessees of the United Company to violate their

leases. No existing competition, or business, was inteferred with by this contract.

The United Company agreed to pay the John Ritchie Company the sum of $750 per annum; being at the rate of 5% upon the principal sum of $15,000, with the right on the part of the United Company to pay the principal sum of $15,000 at any time and cancel the annual payment.

No real estate acquired; only help employed two or three boys.

OLIVER A. MILLER.

Owned factory located in Brockton; employed about sixty-five men.

February, 1902, the United Company purchased from Oliver A. Miller, for $160,000 in cash, his business and patents relating to Treeing Machines, forming the O. A. Miller Treeing Machine Company.

The United Company was not in competition in any manner whatsoever with the Miller Company and the purchase was made entirely for the purpose of extending its business.

Reason for the purchase was that in 1901 Miller became involved in financial difficulties and needed money and he gave an option to one Frank Hannigan, who had managed this business for several years.

Mr. Hannigan was personally acquainted with most of the officers of the United Company and opened negotiations with them with a view to effecting a sale of the business.

Mr. Hannigan has 10% interest in the business and has continued as manager of it.

Factory has been largely extended and at the present time it employs approximately 125 men.

Business is largely the manufacture and sale of tree feet.

BROCKTON SUPPLY COMPANY (Partnership).

Purchased November, 1905, a certain part of the assets and patents of the Brockton Supply Company.

Amount paid $21,724.

Owned no real estate; leased floor space on Franklin Street, Brockton, Mass.; employed about four men.

The business of the Brockton Supply Company consisted largely in millwright work, dealing in second-hand lathes, planers, and other machine tools, leather and various supplies, and the manufacture in a small way of a Tack Pulling machine (under patents issued 1904 and 1905 to one Lyon) and a Vamp Folding Machine.

The United Company had no Tack Pulling Machine, but was endeavoring to develop one. Mr. Hadaway was the principal inventor employed on this work by the United Company.

Business was continued at the same place for a number of years. Reason for purchase:

Some time prior to November, 1905, Mr. Nichols and his partner, Mr. Campbell, had had a serious disagreement and Nichols had suggested that they liquidate their business and separate, and they had sold a portion of their business (the Vamp folding Machine) to the Boston Machine Works. Campbell had suggested to Nichols that he (Nichols) see if they could not sell the rest of their business to the United Company, which Nichols did, and as the United Company had not been able up to that time to produce a Tack Pulling Machine, they were willing to purchase the tangible assets of the firm and the patents that they owned relating to Tack Pulling Machines.

SMITH LACING MACHINE COMPANY.

Owned no real estate and did no manufacturing; contracted with the Metallic Heel & Counter Company to build its machines, but had placed none upon the market.

Purchased in 1906 the entire assets, including patents covering a machine for lacing shoes prior to the lasting operation; paying therefor $50,000 in cash and a royalty of $75 (or $50 if leased in a foreign country) on each machine until $67,500 additional had been paid. This payment was completed within three years.

The United Company owned the application for a patent issued June 4, 1907, which contained broad claims dominating the Smith Machine.

The Smith Company had, however, produced a machine which was believed to be, and proved to be, a commercially successful machine.

Neither the United Company nor the Smith Company had done

any business in Lacing Machines and there was no competition between them; in fact, there was no machine for doing this work upon the market.

There would have been long and expensive litigation between the parties, and in view of this fact the Smith Company desired to sell, and the United Company desired to purchase and furnish to their customers a machine which would do work that had heretofore been done by hand.

The Smith Company had intended to charge an initial payment and royalty for the use of the machine. The United Company furnished these machines to their customers without initial payment and at one-half the royalty that the Smith Company had intended to charge.

After the purchase by the United Company the business was moved to the Beverly Factory and machines have been furnished to the trade ever since.

RICHARDSON SHOE MACHINERY COMPANY.

Purchased December, 1908; amount paid $80,000.

Owned no real estate; operated no factory. Contracted with outside parties to build its machines.

The Richardson Company manufactured an improved McKay Sewing Machine known in the trade as the "Richardson Machine" and owned some twelve or more patents relating to same.

The United Company had been endeavoring for some time to produce a new and improved McKay Sewing Machine and the result of such work was its so-called "Model B" Sewing Machine.

Although the United Company had endeavored to avoid the infringement of all patents owned by the Richardson Company, this machine still infringed broad Claim 16 of Patent No. 710,613.

The largest stockholders of the Richardson Company were William B. Ri and Harry L. Rice, of the firm of Rice & Hutchins, Inc., shoe manufacturers who were large lessees of other machinery manufactured by the United Company. The relations between the parties was of the pleasantest character, and in 1908 Mr. John H. Richardson, the manager of the Richardson Company, approached our General Manager, Mr. C. H. Willson, to see if the British United Company

would not take the agency for England, and perhaps throughout Europe.

After careful examination by our experts, it was decided that the Richardson Machine was a better machine for European work than the United Company's "Model B" Machine. A conclusion was also reached that a better machine than either could be built if the Richardson patents and our own could be combined in a new machine.

Mr. Richardson suggested that the United Company should purchase the Richardson Company, or at least the foreign patents. Mr. Richardson stated that he realized that with only this machine as a business, the Richardson Company would not be able to make much of a success of its business and that he himself would like to come with the United Company.

After the purchase by the United Company the manufacturing of machines was transferred to the Beverly Factory.

The United Company has continued to supply such machines as desired by the trade and has built a new and improved machine embodying the inventions owned by the Richardson Company and the United Company.

Reason for purchase:

In view of the fact that it was believed a better machine than either of the two could be constructed by the use of patents owned by both parties, that the United Company's "Model B" Machine infringed one of the Richardson Company's patents, and the further fact that the Rices were customers and on very friendly relations, the United Company entered into the negotiations, which were finally concluded by the purchase.

The Clicking Machines referred to in the Government Petition were not being manufactured by the Richardson Company. It had a half interest in an experimental machine (and any inventions that might result therefrom) being constructed by the Essex Machine Company.

DEFENDANTS' EXHIBIT 232.

[Put in Evidence, page 3079.]

MACHINE OPERATIONS PERFORMED IN THE MANUFACTURE OF ALL KINDS OF BOOTS AND SHOES AND MACHINES OFFERED BY MACHINERY MANUFACTURERS FOR PERFORMING THOSE OPERATIONS.

(Machines offered by United Shoe Machinery Company are designated by "(United)".)

Cutting Room.

Cutting Vamps, Tops, Foxings, Tongues, and Trimmings.

(United) Ideal Clicking Machine
Parsons — Parsons Machinery Company
Seelye — Seelye Manufacturing Company

Splitting Upper Leather.

(United) Cylinder Splitting Machine
(United) Centennial Splitting Machine
Belt Knife — The American Tool & Machine Co.
Vaughn Belt Knife — The Turner Tanning Machinery Co.

Cutting Cloth Linings, Doublings, and Box Toe Material.

(A Doubler is a cloth reinforcement cemented to light parts of Upper.)

(United) Ideal Clicking Machine
(United) Improved Gearless Sole Cutting Machine
(United) Improved Geared Sole Cutting Machine
Eclipse — Parsons Machinery Company
Seelye — Seelye Manufacturing Company

Tower — Tower Brothers
Knox — Quamby & Hilliker

Crimping Vamps.

Lockett — Lockett Crimping Machine Company

Marking Sizes and Case Numbers on Lining.

Power Lining Marking Machine — Markem Machine Co.

Stamping Parts of the Upper for Matching and Sizing.

(United) Eagle Upper Stamping Machine
Upper Leather Marking Machine — Markem Machine Co.
Eureka Match Marking Machine — Boston Machine Works Co.
Eureka Upper Marking Machine — Boston Machine Works Co.
Perfection Size Marking Machine — Coburn & Lawrence Co.

STITCHING ROOM.

Skiving Parts of Uppers.

(Beveling Edges preparatory to Folding.)

(United) Amazeen Skiving Machine
(United) Pluma Skiving Machine
Universal — Peerless Machinery Company
Fortuna — Fortuna Machine Company
Pierce — C. S. Pierce
Amazeen Type — A. Johnson & Sons
Amazeen Type — Donnelly Machine Co.

Snipping, preparatory to Folding.

(United) Booth Sandal Snipping Machine
Hart — Hamel Shoe Machinery Company
Boston — Boston Machine Works Company
(6 Foot Power Types)
Power — Boston Machine Works Company
Snipping & Cementing Machine — Boston Machine Works Company

Cementing Skived Edges of Upper.

Economy Cementing Machine — Peerless Machinery Company
Duplex — " " "

New York — Boston Machine Works Company
Snipping & Cementing Machine — " " " "

Folding Skived Edges of Upper.

New Vamp — Boston Machine Works Company
Foot Power — Boston Machine Works Company
Boston — Boston Machine Works Company
Booth — Boston Machine Works Company
Rapid Hand Method — Perley R. Glass Company
Straight Edge — American Worsted Machinery Company
Lufkin — R. H. Lufkin
New Cylinder — Perley R. Glass Company

Pounding Seams.

(United) New Power Hammer
Shawmut Power Hammer — Shawmut Machinery Co.
Hart — Hamel Shoe Machinery Company
Little Giant — American Worsted Machinery Company

Marking Vamps for Tips and Vamp Centres for Position of Tips.
(These marks enable the operator to place Vamp and Tip in the correct position on Shoe.)

(United) Paragon Vamp Marking Machine
Rogers — Coburn & Lawrence Company

Perforating Tips and Vamps.

(United) Royal Perforating Machine
(United) Stanbon Perforating Machine
Hart #6 — Hamel Shoe Machinery Company
Hart (Model A) — Hamel Shoe Machinery Company
Barber — L. L. Barber & Co.
American — American Worsted Machinery Company
Peerless — Peerless Machinery Company
Punch Feed — Hamel Shoe Machinery Company
Johnson — A. Johnson & Sons

Punching Tips.

(United) Crown Tip Punching Machine
(United) Stanbon Tip Punching Machine

(United) Royal Tip Punching Machine
Stimson — Edwin B. Stimson & Company
Peerless Improved #2 — Peerless Machinery Company
Model E — Geo. Knight & Company
Model F — Geo. Knight & Company
Model G — Geo. Knight & Company
Power — Geo. Knight & Company
Foot Power — Geo. Knight & Company
Hand — Geo. Knight & Company
Barber Power — L. L. Barber & Company
Barber Foot Power — L. L. Barber & Company
Donnelly — Donnelly Machine Company
Hand Tip Press — L. L. Barber & Company

Pasting Tape.

(Applying Paste to Tape which is to be used for backing Perforations.)

Wheeler — Brockton Stay Company.

Pinking Tip.

(United) Pinking Machine
(Hand) — American Worsted Machinery Company
(Geared) — American Worsted Machinery Company
Pinking & Perforating Machine — Edwin B. Stimson & Co.
(Hand Power) — Edwin B. Stimson & Company

Scalloping Button-Fly.

(Largely done by hand; to some extent on clicking machine.)

(United) Button-Fly Scalloping Machine

Cementing Cloth Doubler Lining to Light Uppers.

(A Doubler is a Cloth Reinforcement cemented to light parts of upper.)

(United) Hub Lining Cementing Machine
K. & K.— George Knight & Company
Peerless — Peerless Machinery Company
Mathey — Coburn & Lawrence Company
Weber — J. H. Nangle
Hand Power — Shawmut Machinery Company

Foot Power — Shawmut Machinery Company
Simplex Cloth Backing Machine — Boston Last Company
"Davis" Electric Taping Machine — The Davis Sewing Machine Company

Seaming Linings in Back.
(Joining the two Quarters of the Lining.)

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Eyelet Stays to Lining.

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Pricking Linings for Placing Facings.

Boston Power Lining Pricking Machine — Boston Machine Works Company

Stitching Button Stay to Lining.

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Wheeler & Wilson — Singer Sewing Machine Company
Davis — The Davis Sewing Machine Company

Stitching Button-Fly Lining to Lining of Shoe.

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Staying Back Seam of Lining.
(Reinforcing Seam with Tape.)
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Stitching Inside Back Stay to Lining.
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Top Facing to Lining.
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Label to Lining.
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Embossing Top Facings.

(United) Embossing Machine (Power)
(United) Embossing Machine (Foot Power)
Simplex — Boston Last Company
Silver King — Markem Machine Company
Freeman — The Louis G. Freeman Company
Perkins — Perkins Machine Company

Stitching Tongue to Side of Lining.

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Counter Lining to Quarter.
(Forming a Pocket for the Counter.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Puritan — Puritan Manufacturing Company
Davis — The Davis Sewing Machine Company

Stitching in Counters on an Unlined Shoe.

Puritan — Puritan Manufacturing Company
No. 3 — Union Lockstitch Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Seaming Quarters or Tops in Back.
(Joining the two Quarters of the Upper.)

Puritan — Puritan Manufacturing Company
No. 3 — Union Lockstitch Company
Singer — Singer Sewing Machine Company

Wheeler & Wilson — Singer Sewing Machine Company
Union Special — Union Special Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Seaming tops in back Zig-Zag Stitch.

(Jointing the two Tops.)

Singer — Singer Sewing Machine Company
Wheeler — Singer Sewing Machine Company
Union Special — Union Special Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.

Seaming Outside of Button-Fly to Top.

Union Special — Union Special Sewing Machine Co.
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Staying Button-Fly Seam.

(Reinforcing with Tape.)

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Davis — The Davis Sewing Machine Company

Staying Top Back Seam.

(Reinforcing Seam.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Stitching Back Stay and Strap above Vamp.

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company

Stitching Outside Heel Stay

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Union Special — Union Special Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching around Top of Shoe.

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Staying Back Seam of Oxford Quarters.

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Puritan — Puritan Manufacturing Company
No. 3 — Union Lockstitch Company
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Over-Edging Tongue

(Over-Stitching around Edge of Tongue, including its Cloth Lining.)

Singer — Singer Sewing Machine Company
Union Special — Union Special Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.

Stitching Lining to Tongue.

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Bellows Tongue between Vamp and Vamp Lining.

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Stitching Side Stays and Bellows Tongue to Top.

(Edge of Tongue placed under Eyelet Stays, Stitching through Eyelet Stay, Tongue and Quarter.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.

Stitching Strap in Pocket.

(End of Strap drawn over Top of Shoe, inserted in a Slit, and Stitched.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company

Fancy Stitching.

(Stitching various Fancy Designs.)

Union Special — Union Special Sewing Machine Co.
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Bonaz — Lintz & Eckhardt

Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching French Cord on Fancy Upper.
(Ornamental Work.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Bonaz — Lintz & Eckhardt
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Binding Top Edge of Pump Slipper.

Singer — Singer Sewing Machine Company
Davis — The Davis Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Attaching Bows.

Simplex — C. E. Hardenbrook Company
Elliott — Elliott Manufacturing Company
Tubular Rivet — Tubular Rivet & Stud Company

Punching Holes for Hooks and Eyelets.

(United) Vulcan Foot Power Punch
Automatic Hook Hole — Boston Machine Works Co.
Foot Power Punch — American Worsted Machinery Co.

Seam Rubbing.

(United) Rapid Seam Rubbing Machine
Champion — Coburn & Lawrence Company
Boston — Boston Machine Works Company
Hand Method — Shawmut Machinery Company
Union — Boston Machine Works Company

Hooking with Stay Reinforcement.
(Attacking Hooks to Men's Shoes.)

Tubular Rivet — Tubular Rivet & Stud Company
American — American Lacing & Hook Company

Foot Power — American Worsted Machinery Company
Halkyard — Halkyard Manufacturing Company

Seaming Foxings at Heel.

(Joining Foxings.)

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Metropolitan — The Metropolitan Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Staying Foxings at Heel.

(Reinforcing Seam with Tape.)

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Davis — The Davis Sewing Machine Company

Stitching Foxings to Quarters.

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
No. 3 — Union Lockstitch Company
Puritan — Puritan Ma ufacturing Company
Davis — The Davis Sewing Machine Company

Seaming Vamp in Back.

(Joining two ends of Vamp.)

No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Staying Inside of Vamp Seam.
(Reinforcing with Tape.)

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Butting Felt Box to Vamp.
(Zig-Zag Stitching Felt Box to Cut-Off Vamp.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Union Special — Union Special Sewing Machine Co.
Standard — The Standard Sewing Machine Company

Stitching Tip to Vamp.

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Standard — The Standard Sewing Machine Company
Davis — The Davis Sewing Machine Company

Stitching Eyelet Row on Quarters or Tops.
(Ornamental Stitching Parallel to Eyelets.)

Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Union Special — Union Special Sewing Machine Company

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Stitching Linings to Tops, Back to Back.

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Turning and Beading.

(Upper and Lining seamed back to back, turned, and beaded.)

(United) Columbia Beading Machine
(United) Victor Beading Machine
(United) Turning and Beading Machine
Monarch — Boston Machine Works Company
Hart — Hamel Shoe Machinery Company
Nangle — J. H. Nangle
Boston — Boston Machine Works Company

Stitching Lining to Top and Undertrimming.

(Stitching Lining to Top, including stitching Front Fold and trimming off Surplus Facing.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.

Marking for Buttonholes.

Adams — Adams Manufacturing Company
Buttonhole Marking — Shoe Manufacturers' Supply Co.

Making Buttonholes.

(United) Buttonhole Making Machine
Reece — The Reece Buttonhole Machine Company

Finishing Buttonholes.

(Stitching a Cord on under side of Button-Fly for Reinforcement of Worked Buttonhole.)

(United) Buttonhole Finishing Machine
Reece — The Reece Buttonhole Machine Company
Singer — Singer Sewing Machine Company

Cording Buttonholes.

(Stitching a heavy Cord around Buttonhole instead of Working Buttonhole on Machine — On Cheap Work.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Attaching Buttons.

Morley — Singer Sewing Machine Company
R. & M.— Peerless Machinery Company
Singer — Singer Sewing Machine Company
Universal — Elliott Manufacturing Company
Elliott — Elliott Manufacturing Company
Heaton-Peninsula — Elliott Manufacturing Company
Reece — The Reece Buttonhole Machine Company

Eyeletting.

(United) Duplex Eyeletting Machine
(United) Perfection Eyeletting Machine
(United) Universal Power Eyeletting Machine
(United) Merrick Power Eyeletting Machine
(United) Samson Eyeletting Machine
(United) Power Eyeletting Machine
(United) Cameo Foot Power Eyeletting Machine
(United) Vulcan Foot Power Eyeletting Machine
Power — George Knight & Company
Foot Power Gang — George Knight & Company
Peerless Rapid — Peerless Machinery Company
Pereless Gang — Peerless Machinery Company
"A" Machine — American Worsted Machinery Company
"B" Machine — American Worsted Machinery Company

Monitor — American Worsted Machinery Company
Eureka — American Worsted Machinery Company

Barring.

(Reinforcing Fly to Upper at Bottom of Fly.)

Singer — Singer Sewing Machine Company

Seaming Toe of Lining.

(Joining the two portions of the Lining at the Toe.)

Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Standard — The Standard Sewing Machine Company
Metropolitan — The Metropolitan Sewing Machine Co.
Davis — The Davis Sewing Machine Company

Seaming Vamp with Welt.

(Joining, with a narrow piece of leather or canvas welting between the two ends of the Vamp.)

No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Union Special — Union Special Sewing Machine Company
Wilcox & Gibbs — Wilcox & Gibbs Sewing Machine Co.
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company

Vamping.

(Stitching Vamp to Top of Shoe.)

Union Special — Union Special Sewing Machine Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company
Standard — The Standard Sewing Machine Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Davis — The Davis Sewing Machine Company

Lacing Uppers.

(Inserting Thread through Eyelet Holes, to temporarily hold Uppers in Place.)

(United) Ensign Lacing Machine
Rochester Lacer — Boston Machine Works Company

Stitching In Counters. Boot Work.

No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Siding Boots.

Campbell — Campbell-Bosworth Machinery Company
No. 3 — Union Lockstitch Company
Puritan — Puritan Manufacturing Company

Staying Side Seam.

Puritan — Puritan Manufacturing Company
No. 3 — Union Lockstitch Company
Singer — Singer Sewing Machine Company
Wheeler & Wilson — Singer Sewing Machine Company

Riveting Outside Counters.

Riveting Machine — Tubular Rivet & Stud Company

SOLE LEATHER ROOM

Cutting Outersole, Innersole, Heel Lifts, Half-Sole, Toplift, Counter, Box Toe, Turn Shank Pieces, Leather and Leather-board, Doublers, and Forepart Fillers.

(United) Improved Gearless Sole Cutting Machines
(United) Improved Baby Sole Cutting Machine — Model P
Eclipse — Parsons Machinery Company
Seelye — Seelye Manufacturing Company
Tower — Tower Bros.
Knox — Quarmby & Hilliker

Preparing Bellies, Shoulders, and Remnants for Cutter. (Rolling, Splitting.)

(United) Summit Splitting Machine
Knox — Quarmby & Hilliker
Hawkins — Seelye Manufacturing Company

Baby — J. S. Wheeler & Company
(United) Victor Rolling Machine
(United) Improved Rolling Machine
Seelye — Seelye Manufacturing Company
Knox — Quarmby & Hilliker
Busfield — James Busfield

Finishing Counter Stock.

(Instead of the leather passing between two rolls under pressure, as in the regular Rolling Operation, a rapidly vibrating brass roll smooths out the wrinkles, and finishes the surface.

Whiting — Gardiner & Beardsell
Holmes — Charles Holmes Leather Working Machinery Company

Stripping and Beveling Stock for Wedge Lifts.

(United) Champion Strip Beveling Machine
Young — W. J. Young Machinery Company

Cutting Wedge Lifts.

(United) Wedge Lift Cutting Machine
Young Wedge Lift Cutting Machine — W. J. Young Machinery Company

Evening Heel Lifts.

(United) Summit Splitting Machine
(United) Centennial Splitting Machine
Hawkins — Seelye Manufacturing Company
Knox — Quarmby & Hilliker
Baby — J. S. Wheeler & Company

Gouging Heel Lifts

(United) Champion Heel Lift Skiving Machine
Young — W. J. Young Machinery Company
Bostock — Thomas Bostock & Sons

Building Heels.

(United) Pyramid Heel Building Machine
(United) Heel Building Machine — Model R
Young Foot Power — W. J. Young Machinery Company

Grover — W. J. Young Machinery Company
White — F. H. White & Company
Bostock — Thomas Bostock & Sons
Bosworth — W. T. Bosworth
Fortuna — Fortuna Machine Company
Knight — George Knight & Co.
Pieced Heel — Parsons Machinery Company

Pressing Heels.

(United) Handy Heel Press
Seelye — Seelye Manufacturing Company

Compressing Heels.

(United) Automatic Heel Compressing Machine #4
(United) Automatic Heel Compressing Machine #5
Heel Compressing Machine — W. J. Young Machinery Company
Heel Compressing Machine — Gimson & Company, Ltd.
Knox Compressing Machine — Quarmby & Hilliker
Heel Compressing Machine — Nolle's Works

Condensing Toplifts.

(United) Automatic Heel Compressing Machine #4

Veneering Insole.

(United) Veneer Press
Busfield — James Busfield

Flexing Insole.

(United) Insole Flexing Machine — Model R (McKay Work Only)
(United) Goodyear Flexible Sole Machine — Model B (Ziegler)
(United) Goodyear Flexible Sole Machine — Model XB
(United) Goodyear Flexible Sole Machine — Power
Wheeler — J. S. Wheeler & Company (McKay Work Only)
Spencer — Edw. E. Spencer, Jr. (McKay Work Only)
Stimson — Edwin B. Stimson Company (McKay Work Only)

Fleshing Insole Stock.

(United) Centennial Splitting Machine

Rounding Insole.

(United) Planet Sole Rounding Machine
Julian — The Boylston Manufacturing Company
Improved Loewer — Consolidated Rotary Rounder Co.
Ross — Consolidated Rotary Rounder Company

Channeling Insole.

(Welt Work Only)

(United) Goodyear Universal Channeling Machine
(Fitted for Gem Insoles, Goodyear Insoles, and Turn Soles)

(United) Goodyear Channeling Machine
(Hand Belt Power)
Channeling Machine — The R. R. Long Machinery Company, Inc.
Haverhill Turn Channeling Machine — Haverhill Shoe Machinery Company
Channeling Machine — Hamel Shoe Machinery Company

Stamping Size on Insole.

(Welt Work Only)

(United) Insole Lip Cutting, Scoring and Sizing Machine
(United) Eagle Sole Stamping Machine
Nichols Grading Machine — Lacene Manufacturing Co.

Stamping Size on Outsole.

(United) Eagle Sole Stamping Machine
Nichols Grading Machine — Lacene Manufacturing Co.

Cutting Lip of Insole and Scoring.

(Welt Work Only)

(United) Insole Lip Cutting, Scoring and Sizing Machine
Flap Slashing Machine — Boston Machine Works Co.

Snipping Lip of Insole at Toe.

(Welt Work Only)

(United) Goodyear Insole Toe Snipping Machine
Insole Snipping and Pinking Machine #7 — Boston Machine Works Company

Turning Lip of Insole.

(Welt Work Only)

(United) Goodyear Lip Turning Machine — Model X

(United) Goodyear Lip Turning Machine

(United) Goodyear Lip Turning and Slashing Machine

American — American Worsted Machinery Company

Knight — George Knight & Company

Duplessis — Hamel Shoe Machinery Company

Haverhill — Haverhill Shoe Machinery Company

Long — The R. H. Long Machinery Company, Inc.

Turning Lip of Gem Insole.

(Welt Work Only)

(United) Gem Lip Turning Machine

(United) Goodyear Lip Turning & Slashing Machine

Lip Turning Machine — Haverhill Shoe Machinery Company

American — American Worsted Machinery Company

Knight — George Knight & Company

Duplessis — Hamel Shoe Machinery Company

Haverhill — Haverhill Shoe Machinery Company

Long — The R. H. Long Machinery Company, Inc.

Cementing Gem Insoles and Gem Canvas.

(Welt Work Only)

(United) Gem Cementing Machine (Cementing Canvas)

(United) Rapid Rotary Cementing Machine (Cementing Gem Insoles)

Haverhill — Universal Supply Company (Cementing Insole)

Hazel-Brown — Hazen-Brown Company (Cementing Insole)

Julian — Boston Machine Works Company (Cementing Insole)

Forming and Trimming Gem Canvas to Shoulder.

(Welt Work Only)

(United) Gem Flexible Insole Machine

Hardening Shoulder.

(Welt Work Only)

Rib Tightening or Hardening Machine — The Plymouth Rubber Company

Rib Tightening or Hardening Machine — Walpole Shoe Supply Company

Wetting Economy Insole.

(Welt Work Only)

(United) Economy Insole Wetting Machine — Model X

(United) Rapid Rotary Cementing Machine — Model J (Water Roll instead of Cement)

Channeling Economy Insole.

(Welt Work Only)

(United) Economy Insole Channeling Machine

Cementing Economy Insole.

(Welt Work Only)

(United) Rapid Rotary Cementing Machine — Model J

Julian — Boston Machine Works Company

Brown — Hazen-Brown Company

Haverhill — Universal Supply Company

Reinforcing Economy Insole.

(Welt Work Only)

(United) Economy Insole Reinforcing Machine

Stripping Outsole Stock.

(United) Improved Stripping Machine — Foot Power

(United) Improved Stripping Machine — Power

Parsons — Parsons Machinery Company

Seelye — Seelye Manufacturing Company

Knox — Quarmby & Hilliker

Tower — Tower Brothers

Blocking Outsole.

Knox Power Blocking Machine — Quarmby & Hilliker (Heavy)

Knox Power Blocking Machine — Quarmby & Hilliker (Light)

Evening Outsole.

(United) Summit Splitting Machine
Hawkins — Seelye Manufacturing Company
Nichols — Lacene Manufacturing Company
Baby — J. S. Wheeler & Company
Knox — Quarmby & Hilliker

Improving Soles.

(Condensing Outsole)

(United) U.S.M.C. Tap and Sole Improving Machine

Rolling Outsole.

(United) Victor Rolling Machine
(United) Improved Rolling Machine
Knox — Quarmby & Hilliker
Busfield — James Busfield
Seelye — Seelye Manufacturing Company

Rounding McKay and Turn Outsole.

(United) Planet Sole Rounding Machine
Improved Loewer — Consolidated Rotary Rounder Co.
Ross — Consolidated Rotary Rounder Company
Julian — The Boylston Manufacturing Company

Grading Outsole.

Nichols Grading Machine — Lacene Manufacturing Co.

Quilting Outsole.

(Driving Wire Slugs to form certain designs on bottom or top of shoe.)

(United) Spatter Quilting Machine
(United) Universal Slugging Machine (With Quilting Attachment)

Flexing Outsole.

(United) Goodyear Flexible Sole Machine (Ziegler) — Model B

Channeling Turn Sole.

(Turn Work Only)

(United) Goodyear Turn and Insole Channeling Machine
(United) Goodyear Universal Channeling Machine (Turn)

Channeling Machine — The R. H. Long Machinery Company, Inc.
Haverhill Turn Channeling Machine — Haverhill Shoe Machinery Company
Channeling Machine — Hamel Shoe Machinery Company
Channeling McKay and Standard Screw Outsole.
(United) Apex Channeling Machine
(United) McKay Channeling Machine — Model Z
McKay — Walter Pearson
McKay — American Worsted Machinery Company
McKay — George Knight & Company

Thin Edging Outsole.
(McKay Work Only)
(United) Apex Thin Edge Machine
Rapid — Theo. Ringenbach

Shank Reducing and Feather Edging Outsole.
(United) Goodyear Turn and Insole Channeling Machine (Turn Work Only)
(United) Goodyear Outsole Channel Shank Reducing Machine (Welt Work Only)
(United) Apex Feather Edge and Shank Reducing Machine
(United) Rotary Feather Edge and Shank Reducing Machine
Knight — George Knight & Company
Rapid — Theo. Ringenbach
American — American Worsted Machinery Company

Fleshing or Randing Outsole or Heel Seat of Outsole.
(United) Apex Fleshing or Randing Machine
(United) Empire Splitting Machine (Fleshing Heel Seats)

Splitting Heel of Turn Sole for Louis Heel.
(Turn Work Only)
(United) Krieg Hand Power
(United) Empire Splitting Machine
Busfield — James Busfield

Moulding Down Edge of Sole.
(Turn Work Only)

(United) Goodyear Moulding Machine
(United) Goodyear Power Moulding Machine
Turn Moulder — Haverhill Shoe Machinery Company
Turn Moulder — Hamel Shoe Machinery Company

Scarfing Turn Sole at Heel.
(Turn Work Only)

(United) Turn Sole Scarfing Machine — Model A

Skiving Shank Piece.
(Turn Work Only)

(United) Champion Shank Skiving Machine
Young — W. J. Young Machinery Company

Roughing Tap and Sole.

(United) Velvet Box Toe and Counter Buffing Machine
Peerless Tap Scouring Machine — Peerless Machinery Company

Cutting Taps for Rights and Lefts.

(United) Tap Cutting Machine — Model S
Bostock — Thomas Bostock & Sons

Skiving Butt of Tap and Skiving Leather and Leatherboard Doublers.

(United) Apex Tap Skiving or Rand Splitting Machine
(United) Counter Skiving Machine — Model W
N.O.S.— American Worsted Machinery Company
Improved Tripp — American Worsted Machinery Co.
Busfield — James Busfield
American — Victor Shoe Machinery Company

Cementing Tap and Outsole.

(United) Rapid Rotary Cementing Machine — Model J
Julian — Boston Machine Works Company
Haverhill — Universal Supply Company
Brown — Hazen-Brown Company

Tacking Tap to Outsole.

(United) Wire Grip Tacking Machine
(United) Staple Fastening Machine

(United) Cable Tacking Machine
(United) Taper Nail Tacking Machine
Universal Sole Clinch Machine — Universal Shoe Machinery Company
Duplessis — Hamel Shoe Machinery Company
Victor — Victor Shoe Machinery Company
Fairstitching Tap or Welt to Outsole.
(United) Goodyear Rapid Stitcher
Puritan — Puritan Manufacturing Company
Union — Union Lockstitch Company
Campbell — Campbell-Bosworth Machinery Company
Landis — Landis Machine Company
Randall — The J. D. Randall Company
O'Flaherty — The John O'Flaherty Company
Simplex — James Clark Leather Company
Leger — C. V. Engstrom & Company

Rounding Tap to Outsole.

(United) Apex Tap and Sole Rounding Machine
Severance — American Worsted Machinery Company

Scarfing Spring Heel.

(United) Boss Spring Heel Scarfing Machine
Young — W. J. Young Machinery Company
Bostock — Thomas Bostock & Sons
Bowden — Thos. J. Bowden & Son

Tacking Spring Heel to Sole.

(United) Grip Tacking Machine
(United) Cable Tacking Machine
(United) String Nail Tacking Machine
(United) Staple Fastening Machine
Duplessis Tacking Machine — Hamel Shoe Machinery Co.
Universal Sole Clinch Machine — Universal Shoe Machinery Company
Victor — Victor Shoe Machinery Company

Trimming Spring Heel.

(United) Apex Spring Heel Trimming Machine — Model A

Tacking on Shank.

(United) Boston Tacking Machine
(United) Wire Grip Tacking Machine
(United) String Nail Tacking Machine
(United) Cable Fastening Machine
(United) Staple Fastening Machine
Freeman Insole Tacker — Louis G. Freeman Co.
Victor — Victor Shoe Machinery Company
Tacking Machine — A. Johnson & Sons
Duplessis Tacking Machine — Hamel Shoe Machinery Company

Doubling shanks of Outsole if light with Leather or Leatherboard.

(United) Rapid Rotary Cementing Machine
Julian — Boston Machine Works Company
Haverhill — Universal Supply Company
Brown — Hazen-Brown Company

Moulding Outsole.

(United) American Twin Sole Moulding Machine
(United) Single Sole Moulding Machine
Knox — Quarmby & Hilliker
C. & J. — The Boylston Manufacturing Company
Hawkins — Seelye Manufacturing Company

Toe Gouging.

(Gouging Forepart of Sole)

(United) Crescent Toe Gouging Machine

Opening McKay and Standard Screw Channel

(United) Apex Channel Opening Machine
Fischer — American Worsted Machinery Company
Fischer — George Knight & Company

Slashing McKay Welts.

(United) Welt Slashing Machine
Knipe — William Knipe
Brewer — A. G. Brewer
Bostock — Thomas Bostock & Sons

Combination Welt Splitting & Slashing Mch.— Jas. Busfield

Cementing McKay Welt.

(United) Rapid Rotary Cementing Machine — Model J
Brown — Hazen-Brown Company
Haverhill — Universal Supply Company
Julian — Boston Machine Works Company

Laying McKay Welt to Outsole.

(United) Apex Welt Laying Machine — Model A
(United) Apex Welt Laying Machine — Model X
Welt Laying Machine — Kimball Brothers & Sprague

Tacking on McKay Welt to Outsole.

(United) Power Welt Tacking Machine (May be fitted for Slashing and Tacking Welt)

(McKay welting is generally attached by cementing or fair stitching)

Attaching Forepart Fillers.

(United) Boston Tacking Machine
(United) Cable Wire Tacking Machine
(United) Wire Grip Tacking Machine
(United) Staple Fastening Machine
Tacking Machine — A. Johnson & Sons
Victor — Victor Shoe Machinery Company
Hamel Tacking Machine — Hamel Shoe Machinery Co.

Splitting Heel Rands.

(United) Apex Tap Skiving or Rand Splitting Machine
(United) Improved Rand Splitting Machine — Model S
Tripp — American Worsted Machinery Company
N.O.S.— " " " "
Busfield — James Busfield
Young — W. J. Young Mchy. Company

Turning Heel Rands.

(United) Star Rand Turning Machine
Bostock — Thomas Bostock & Sons
Busfield — James Busfield
American — American Worsted Machinery Company

Tacking on Heel Rands.

(United) Staple Fastening Machine
(United) String Nail Tacking Machine
(United) Boston Tacking Machine
(United) Wire Grip Tacking Machine
(United) Cable Tacking Machine
(United) Power Welt Tacking Machine
(United) Taper Nail Tacking Machine
Victor — Victor Shoe Machinery Company
Duplessis Tacking Machine — Hamel Shoe Machinery Company

Cutting Off Heel Rands.

(United) Rand Cutting Machine — Model A
Bostock — Thomas Bostock & Sons
Busfield — James Busfield

Wetting Counter.

Stewart — Stewart Brothers

Skiving Edges of Counter.

(United) Monarch Box Toe & Counter Skiving Machine
(United) Counter Skiving Machine — Model W
(United) Counter Skiving Machine — Model S
Stewart — Stewart Brothers
Young — W. J. Young Machinery Company
Hartwell — L. L. Hartwell
Moenus Revolver Skiving Machine — Moenus Machine Works, Frankfurt. Germany

Finishing Ends of Counter.

Thurston — W. J. Young Machinery Company
Stewart — Stewart Brothers
Moenus — Moenus Machine Works

Buffing Counter.

(United) Velvet Box Toe Buffing Machine
Perfection — W. J. Young Machinery Company

Waxing and Rolling Counter.

Stewart — Stewart Brothers
Young — W. J. Young Machinery Company

Moulding Counter.

Young — W. J. Young Machinery Company
Stewart — Stewart Brothers

Skiving Box Toe.

(United) Amazeen Skiving Machine
(United) Pluma Skiving Machine
(United) Monarch Box Toe & Counter Skiving Machine
Young — W. J. Young Machinery Company
Fortuna — Fortuna Company

Buffing Box Toe.

(United) Velvet Box Toe Buffing Machine
Perfection — W. J. Young Machinery Company

LASTING ROOM.

Tacking Insole to Last.

(United) Staple Tacking Machine
(United) U.S.M.C. Insole Tacking Machine #1
Freeman Insole Tacker — The Louis G. Freeman Company

Rounding Heel Seat of Insole.

(Welt Work only)
(United) Goodyear Insole Heel Seat Trimming Machine — Model B

Assembling.

(Inserting Counter Preparing Box Toe Placing Upper on Last and Tacking and Lining-up by Machine)
(United) Rex Assembling Machine

Gumming Box Toe.

(Usually done by hand)
(United) Rex Toe Gumming Machine

Toe Softening.

(Steaming and Softening the Box Toe to facilitate the operation of Pulling-Over and Lasting.)

(United) Toe Softening Machine — Model C
(United) Toe Softening Machine — Model D
Carlson — Carlson Brothers
Bostock — Thomas Bostock & Sons
Beckwith — Beckwith Box Toe Company

Pulling-Over.

(Pulling the upper over the last at the Toe, Tacking with 5 or 7 Tacks.)

(United) Rex Pulling-Over Machine — Model A
(United) Rex Pulling-Over Machine — Model B
(United) Rex Pulling-Over Machine — Model C
Atlas — Atlas-Werke Pohler & Company
Victor — Nolle's Works
Moenus — Moenus Machine Works
Pulling-Over Machine — Ward & Gent

Lasting.

(United) Consolidated Hand Method Lasting Machine (McKay Work)
(United) Consolidated Hand Method Lasting Machine (Welt Work)
(United) Consolidated Hand Method Lasting Machine (Side Lasting)
(United) Consolidated Hand Method Lasting Machine (Turn Heel)
(United) Consolidated Hand Method Lasting Machine (Turn Toe)
(United) U. S. M. C. #5 Lasting Machine (Lasting Heel & Toe) Welts
(United) Ideal Lasting Machine (Lasting Heel & Toe) Welts

Pounding & Trimming.

(McKay Work Only)
(United) Wentworth Heel Seat Beating & Finishing Machine
(United) Rex Rotary Pounding & Trimming Machine

Pounding Heel Seats.

(United) Wentworth Heel Seat Beating & Finishing Machine
(United) Rex Hammer Pounding Machine — Model F
(United) Rex Rotary Pounding & Beating-Up Machine (Turn Work)
(United) Rex Rotary Pounding Machine — Model C

Trimming Uppers.

(Welt work only)
(United) Rex Upper Trimming Machine — Model H

Trim.

(United) Goodyear Turn Shoe Trimming Machine

Turning Shoe.

(Turn Work only. Usually done by hand.)
(United) Goodyear Forepart Turning Machine
(United) Goodyear Heel Turning Machine

Ironing Toe of Uppers.

(Goodyear work only)
(United) Ironing Machine — Model B

Post Ironing Machine — Boston Last Company
Electric Toe Iron — The Louis G. Freeman Company

Laying McKay Soles.

(United) Wire Grip Tacking Machine
(United) Staple Fastening Machine
(United) Taper Nail Tacking Machine
Universal Sole Clinching Mach.— Universal Shoe Machinery Company

Drying Box Toes.

Savoday Rack — Savoday Rack Company
Vulcan Rack — Savoday Rack Company

Bottoming Room.

Upper Stapling.

(Welt Work Only)
(United) Goodyear Upper Stapling Machine

Pulling and Resetting Upper Tacks.

(Welt Work Only)
(United) Goodyear Tack Pulling and Resetting Machine
(United) Goodyear Upper Tack Pulling Machine
(United) Rapid Tack Pulling Machine
Krentler-Pym Tack Puller and Lifter — The L. G. Freeman Company

Grooving and Beveling Welting.

(United) Goodyear Power Welt Grooving and Beveling Machine
Haverhill — Haverhill Shoe Machinery Company
Long — The R H. Long Machinery Company, Inc.
Hamel — Hamel Shoe Machinery Company

Welt Sewing.

(Welt Work Only)
(United) Goodyear Welt and Turn Shoe Machine
(United) Goodyear Welt and Turn Shoe Machine — Model G
(United) Goodyear Welt and Turn Shoe Machine — Model K
(United) Goodyear Universal Machine

Haverhill Turn Sewing and Welting Machine — Haverhill Shoe Machinery Company

Summit Splitting Machines Centennial Splitting Mach.	43. Evening Heel Lifts	Knox — Quarmby & Hilliker Hawkins — Seelye Mfg. Co. Baby — J. S. Wheeler & Co.
Champion Heel Lift Skiving Machine	43a. Gouging Heel Lifts	Young — W. J. Young Mchy. Co. Bostock — Thos. Bostock & Sons
Pyramid Heel Building Machine Heel Building Machine Mod. R	44. Building Heels	Young (Foot Power) — W. J. Young Machinery Co. Grover — W. J. Young Mchy. Co. White — F. H. White & Co. Bostock — Thos. Bostock & Sons Bosworth — W. T. Bosworth Fortuna — Fortuna Machine Co. Knight — Geo. Knight & Co. Pieced Heel — Parsons Mchy. Co.
Handy Heel Press	44a. Press Heels	Seelye — Seelye Manufacturing Co.
Automatic Heel Compressing Machine Mod. #4 Automatic Heel Compressing Machine 5	45. Compressing Heels	Heel Compressing Machine — W. J. Young Machinery Co. Heel Compressing Machine — Gimson & Co., Ltd. Knox — Quarmby & Hilliker Heel Compressing Machine — Nolle's Works
	46. Placing Heels in Boxes for use (Hand Work)	
Summit Splitting Machines	47. Evening Outersoles	Hawkins — Seelye Mfg. Co. Knox — Quarmby & Hilliker. Nichols — Lacene Manufacturing Company Baby — J. S. Wheeler & Co.
Victor Rolling Mach. Improved Rolling Mach.	48. Rolling Outersoles	Knox — Quarmby & Hilliker. Busfield — Jas. Busfield
Apex Tap Skiving or Rand Splitting Mach.	49. Skiving Butt of Tap	Seelye — Seelye Manufacturing Co. N O S — American Worsted Machinery Co. Busfield — Jas. Busfield Imp. Tripp — American Worsted Machinery Co.
	50. Sorting Outersoles (Hand Work)	American — Victor Shoe Mchy. Co.
	51. Matching Cut Stock with Tags (Hand Work)	

Machines of U. S. M. Co.	Operations	Machines of other Dealers
Eagle Sole Stamping Machine	52. Stamping Sizes on Soles	Nichols Grading Machine — Lacene Mfg. Co. Various Hand Devices
	53. Casing Soles in Sizes and Pairs (Hand Work)	
	54. Stamping Case Number on Top Sole (Hand Work)	
	55. Wetting Outersoles and Taps (Hand Work)	
Apex Channeling Mach. McKay Channeling Mch. Mod. Z	56. Channeling Outersoles	McKay — Geo. Knight & Co. McKay — American Worsted Mchy Co. McKay — Walter Pearson
Rapid Rotary Cementing Machine	57. Doubling Shanks of Outersoles (if light)	Brown — Hazen-Brown Co. Haverhill — Universal Supply Co. Julian — Boston Machine Wks. Co.
Rapid Rotary Cementing Machine	58. Cementing Foreparts of Outersoles	Brown — Hazen-Brown Co. Haverhill — Universal Supply Co. Julian — Boston Machine Wks. Co.
Rapid Rotary Cementing Machine	59. Cementing Taps	Brown — Hazen-Brown Co. Haverhill — Universal Supply Co. Julian — Boston Machine Wks. Co.
Rapid Rotary Cementing Machine Taper Nail Tacking Machine Cable Tacking Machine Wire Grip Tacking Machine Staple Tacking	60. Applying Taps to Outersole (Tack and Cement)	Brown — Hazen-Brown Co. Haverhill — Universal Supply Co. Julian — Boston Machine Works Co. Universal Sole Clinch Machine — Universal Shoe Machinery Co. Duplessis — Hamel Shoe Machinery Company Victor — Victor Shoe Machinery Co.
Boston Tacking Machine Cable Tacking Machine Staple Fastening Mach. Wire Grip Tacking Mach. String Nail Tacking Mach.	61. Tacking in Shanks (Also Hand Work)	Freeman Insole Tacker — The Louis G. Freeman Co. Tacking Machine — A. Johnson & Sons. Duplessis Tacker — Hamel Shoe Machinery Co. Victor — Victor Shoe Mchy. Co.
Apex Tap & Sole Rounding Machine	61a. Rounding Tap to Outersole	Severance — American Worsted Machinery Co.
American Twin Sole Moulding Machine	62. Moulding Soles	Knox — Quarmby & Hilliker C. & J. — The Boylston Mfg. Co.

Machines of U. S. M. Co.	Operations	Machines of other Dealers
Single Sole Moulding Machine		Hawkins — Seelye Mfg. Co.
Crescent Toe Gouging Machine	62a. Toe Gouging if necessary	
Apex Channel Opening Machine	63. Opening Channels	Fischer — American Worsted Machinery Co. Fischer — Geo. Knight & Co.
	64. Tying in Cases (Hand Work)	
	65. Placing Soles and Counters in Boxes ready for Lasters (Hand Work)	
	66. Matching Sole Leather with Uppers (Hand Work)	
	Lasting Room	
	67. Putting up Lasts on Racks (Hand Work)	
USMC Insole Tacking Machine No. 1 is available for this work (Most manufacturers do not tack on innersoles)	68. Tacking Insoles to Lasts	Freeman Innersole Tacker — The Louis G. Freeman Co.
Rex Assembling Machine Mod. E. Many Manufacturers still assemble by hand work aided by Crispin Lasting Jack (Sold by U.S. M. Co. and others)	69. Assembling (Many Manufacturers assemble by hand work)	Crispin Lasting Jack is used by hand workmen. Is sold by many concerns including F. W. Whitcher Co., Albany Building, Boston
Rex Pulling Over Machine Mod. A	70. Pulling over Uppers	Moenus — Moenus Machine Wks. Victor — Nolle's Works Ward & Gent — Ward & Gent "Pulling Over Machine"— Alex. Stone, U. S. Hotel, Boston, Mass., Agent for Atlas-Werke Pohler & Co.
Consolidated Hand Method Lasting Machine (McKay Machine) Chase Lasting Machine.	71. Lasting	Consolidated Type — Standard Rotary Machine Co. Consolidated Type — Atlas-Werke Pohler & Co., Ltd. Consolidated Type — Gimson & Company, Ltd.

Machines of U. S. M. Co.	Operations	Machines of other Dealers
		"Consolidated Type Lasting Machine"— The Standard Engineering Co.
		Victor Con. Type — Nolle's Wks.
		Lasting Machine — Ward & Gent.
Rex Rotary Pounding and Trimming Machine Wentworth Heel Seat Beating and Finishing Mach.	72. Pounding and Trimming	
	72a. Pulling Insole Tacks. (Chiefly Hand Work)	
Wire Grip Tacking Mach. Taper Nail Tacking Mach. Staple Fastening Mach.	73. Tacking on Soles	Universal Sole Clinch Machine — Universal Shoe Machinery Co.
	74. Pulling Lasts and Cut or Remove Lacers (Hand Work)	
	75. Inspecting Lasting (Hand Work)	
	Bottoming Room.	
McKay Sewing Machine Mod. B. McKay Sewing Machine Mod. S. Richardson Sole Sewing Machine	76. McKay Sewing (Moisten if necessary)	McKay — American Worsted Mchy. Co. McKay — Walter Pearson " — A. Johnson & Sons Victor — Nolle's Works
Goodyear Rapid Stitcher	77. Fairstitching (Sometimes done in Stock Room)	Randall — The J. D. Randall Co. Puritan — Puritan Mfg. Co. Landis — Landis Machine Co. Union — Union Lockstitch Co. O'Flaherty — The John O'Flaherty Company Leger — James Clark Leather Co. Campbell — Campbell Bosworth Machine Co.
Loose Nailing Machine Loose Nailing Machine No. 2 Grip Clinch Machine	78. Nailing Heel Seats	Long Loose Nailer — The R. H. Long Machinery Co., Inc. Duplessis Loose Nailer — Hamel Shoe Machinery Company Universal Loose Nailing Machine — Universal Shoe Machinery Co.

Machines of U. S. M. Co.	Operations	Machines of other Dealers
		Universal Sole Clincher — Universal Shoe Machinery Co. Victor — Victor Shoe Machinery Company
Star Channel Cementing Machine	79. Cementing Channels and Lips	Union — The Boylston Mfg. Co.
Channel Laying Machine Mod. W	80. Laying Channels (If Top Edge is indented, operation performed at this point)	American — American Worsted Machinery Co. Channel Laying Machine — Standard Rotary Machine Co. Knight — Geo. Knight & Co. Standard — The Standard Engineering Company
Atlas Leveling Machine	81. Leveling	C. & J.— The Boylston Mfg. Co.

SELLING PRICES OF HEEL AND FOREPART CUTTERS.

HEEL CUTTERS.

Price, January '99.	We reduced price March 1, 1900, to:
Complete Set, with Heel Cutter: $3.25	Complete Set of Blades and Heel Seat Cutter: $2.25
Set of Blades only: $2.00	Set of Blades only: $1.00

FOREPART AND SHANK CUTTERS.

Price, January '99.	Price reduced March 1, 1900.
$ .35	$ .25

EDGE IRONS.

Old Price	Price — March 1, 1900.
$ .50	$ .25

NOTE: When we took over the Boston Shoe Tool Company, the price of Forepart Cutters was 35c each, or $25.00 per 100. We reduced this price to 25c each — in any quantity.

Forepart and Shank Cutters have always sold at the same price.

MEMORANDUM. RE MR. E. W. WARREN, SOMERSWORTH, N. H.

Boston, Mass., Dec. 2, 1913.

Mr. E. A. Smith, of our Haverhill Office, reported to me this morning over the telephone that upon my request he had Mr. Locke, of

our Haverhill Office (who is personally acquainted with Mr. E. W. Warren), telephone him yesterday afternoon about four o'clock, in reference to the saving of 3c per dozen that Mr. Warren is making in the cost of welting on our Model K Machine over and above the price that he paid on the regular Welt & Turn Machine; namely — that he formerly paid 15c per dozen and is now paying 12c.

Mr. Warren said that he would be glad to have us use the information if it would do us any good, and that he would also be perfectly willing to be interviewed by our counsel and give such information as he could that might be of advantage and service to us.

F. G. KING.

[Put in Evidence, page 3168.]

MEMORANDUM.

Boston, Mass., Dec. 1, 1913.

Talked with A. E. C. Hall, of our Auburn Office, with the result that he saw the representatives mentioned below, who said they would be very glad to have us use the information in reference to labor cost and production ont he Welt & Turn Shoe Machine, and that the prices as mentioned on the memoranda which we have are correct.

F. G. KING.

	Price per Doz.
Foss, Packard & Co., Auburn, Me., Mr. Briggs, Supt. & Gen. Mgr.	
Welt & Turn	.16
Welt & Turn — Model K	.14
Saving of Model K over Old 2c per doz.	
Howard, Briggs & Pray Co., Auburn, Me., Mr. Sprague.

Field Bros. & Gross Co., Auburn, Me., Mr. Mason, Gen. Mgr.

Welt & Turn	.14
Welt & Turn — Model G	.10
Welt & Turn — Model K	.10

Saving of Models G & K over Old 4c per doz.

MEMORANDUM. C. A. EATON COMPANY, AUGUSTA, MAINE. 12/1/13.

Talked over the telephone with Chester Eaton, of Brockton, who said that we may use any information that is authentic in reference to prices for labor in connection with their factories which we may wish to do, and which will help us.

He says the price paid by them at their Augusta, Maine, Factory for welting on the old machine was 16c per dozen, and on the Model G Machine, 15c per dozen.

When the Model K Machine was installed in the Augusta, Maine, Factory, all but two of their men agreed to take a lower rate, and they tried to establish the price at 14c per dozen, but it has not been definitely adjusted and they are still paying the 15c rate.

F. G. KING.

	Price per Doz.
Welt & Turn	.16
Welt & Turn — Mod. G	.15
Welt & Turn — Mod. K	.15

Saving of Mod. K and Mod. G over Old 1c per doz.

MEMORANDUM. STETSON SHOE COMPANY, SOUTH WEYMOUTH, MASS. 12/1/13.

Talked over the' phone with Mr. Heald, of the above concern, who says they are entirely willing that we use the information in

reference to cost of labor and savings on Welt Machines in operation in their factory, if we desire to do so.

F. G. KING.

SHOE MANUFACTURERS ALLIANCE
1507 Washington Avenue

St. Louis, Mo., Dec. 29, 1910.

Mr. S. W. Winslow, President, United Shoe Machinery Co., Albany Bldg., Boston, Mass.

My dear Sir: At a recent meeting of the Shoe Manufacturers' Alliance I was requested to extend to you and to Mr. Geo. W. Brown, together with such other officials of your Company as you desire, an invitation to meet with the Executive Committee of the Shoe Manufacturers' Alliance at St. Louis, Chicago or Cincinnati at any date convenient to you between Jan. 5th and 20th.

The object of this conference is to discuss with you matters of mutual interest to your company and the Shoe Manufacturers associated together. Upon indication of the date and place agreeable to you, I will notify the Executive Committee of your pleasure in the matter.

Very truly yours,

F. C. RAND, Secretary.

January 2, 1911.

Mr. F. C. Rand, Sec'y, Shoe Manufacturers' Alliance, 1507 Washington Ave., St. Louis, Mo.

Dear Sir: Yours of the 29th of December at hand, inviting Mr. George W. Brown and myself, together with such other officials of the Company as I may desire, to meet your Executive Committee at St. Louis, Chicago, or Cincinnati, at a date convenient to us between January 5th and 20th. It is impossible for me at this time to name a date, within the dates that you have mentioned, when it will be convenient for me to accept your invitation. I will endeavor, however, to name a date as soon as possible.

You state that the object of this conference is to discuss with you "matters of mutual interest to your Company and the shoe manufacturers associated together."

I should be very glad to discuss any matters of mutual importance, but in order that the interview may be of practical benefit, I would suggest that you inform me specifically as to the matters of mutual interest which your Committee has in mind to discuss.

Awaiting your reply, I remain

SWW–NW

Very truly yours,

SHOE MANUFACTURERS ALLIANCE
1507 Washington Avenue

St. Louis, Mo., Jan. 4th, 1911.

Mr. S. W. Winslow, Pres., United Shoe Machinery Co., Lincoln & Kneeland Sts., Boston.

Dear Sir: I wish to acknowledge receipt of your favor of Jan. 2d,

stating that you cannot meet us between Jan. 5th and 20th but will advise as soon as possible just when it will be convenient for you to meet with the Executive Committee of the Shoe Manufacturers' Alliance.

In answer to your request that we state specifically what we wish to discuss — will state that the shoe manufacturers are looking for improved conditions under which to make shoes. The only specific points of mutual interest between you and the shoe manufacturers are the sale, rental and royalty of machines by you, together with the charges made thereon, and a general discussion of this subject, which is of great significance to all parties concerned, is desired.

Upon receipt of information from you fixing the date of meeting, I will advise the Executive Committee.

Yours truly,

F. C. RAND, Secretary.

Mr. George A. Learned, George A. Learned Company, Newburyport, Mass.

Dear Sir: While I have no desire to continue a correspondence with you in which, as shown by your letter of December 20th, you so incorrectly record your spoken words to me in the presence of others, I cannot permit your letter of that date to close it.

Our conversation was as I stated it in my letter to you of December 18th, and if you now disavow that retraction of the untrue statements you have been spreading, I shall, both for myself and my Company, hold you strictly responsible for all the consequences that may follow.

I never made to you any statement that "I would drive you out of business if you did not throw out the machines competing with ours"— either in words or substance — or any statement like it. On the contrary, at our first interview — August 24th — I told you

we would give you independent department leases of all machines except Goodyear Department Machines (which you did not care to use) and sell you all General Department Machines, and this you acknowledged at our interview of December 5th, and if you allow this untrue report to remain uncontradicted, or seek to further spread it, you will do so at your peril.

Very truly yours,

S. W. WINSLOW.

DEFENDANTS' EXHIBIT 259.

[Put in Evidence, page 3617.]

Taken up by Mr. Howe, E. P. H. File.

Boston, January 16, 1901.

Moorfield Storey, Esq.,

Dear Sir: I have reported to the Executive Committee of the United Shoe Machinery Company that, as a result of the conferences between the Committee representing the Shoe Manufacturers, on the one side, and the President of the United Shoe Machinery Company on the other side, and as the outcome of our meeting to-day as counsel for the respective interests, a form of lease of the United Company's metallic department machinery, for those lessees who wish

a lease to use such machinery independently of the lasting machinery and sole sewing machinery leased by the United Company, has been agreed to. This form of lease may be called for convenience of reference the "Independent" lease.

In order that the present and prospective lessees of the United Company may clearly understand the differences between this Independent lease and the lease of metallic department machinery at present in use by the United Company (which I will call the "United" lease) a reasonable time should be afforded for each lessee to judge which form is best for his interest. The "Independent" lease by its terms can be exchanged for a "United" lease at any time, when the lessee is not in default, on written notice to the lessor, and the United Company now proposes, if the Committee whom you represent so approve and recommend to its constituents, to allow any lessee who has signed, or who shall forthwith on request sign, a "United" lease, the right, at any time before February 1st, 1902, if he is not in default, to surrender such "United" lease by accepting and executing an "Independent" lease of the same metallic department machinery. At our interview to-day, you suggested that a period of two years should be allowed for lessees who sign the "United" leases to exchange them for "Independent" leases. It has been assumed by the Executive Committee of the United Company, until I reported your suggestion to them, that three months would give sufficient time for a lessee to make up his mind which form of lease he wished to take, but in view of your suggestion, and with the desire to meet the wishes of the shoe manufacturers as nearly as is practicable, it has been decided, if recommended by your Committee, that such exchange may be made at any time within one year, that is, on or before February 1, 1902, which would seem to afford the most doubtful lessee ample opportunity to acquire information and decide whether it is for his interest to retain the "United" lease.

The proposed "Independent" lease and the privilege, until February 1, 1902, to those lessees, who have signed or shall sign "United' leases, to exchange them for "Independent" leases, are submitted upon the understanding that the Committee, whom you represent, are satisfied with and will recommend the same, and that they appre-

ciate and will report that the officers of the United Company have given careful consideration to all the requests and suggestions of the Committee, and have manifested a sincere desire to accede to the same, so far as consistent with the policy of the Company toward those lessees who wish to use its machinery in all departments of their respective factories. Very truly yours,

ELMER P. HOWE.

The original of the above letter was delivered to Mr. Storey this day upon his assurance that he would recommend the Independent lease and the foregoing offer of the United Company for approval and acceptance by his clients, and that if his clients — the Committee — do not endorse and recommend the same to the N. E. Ass'n the proposition and this letter shall be withdrawn.

E. P. H. Jan. 16/01.

All letters to be addressed to the firm.

Boston, 21st January, 1901.

Elmer P. Howe, Esq., 53 State Street, Boston, Mass.

Dear Sir: I hand you herewith the draft of the independent lease which you enclosed in your letter of the 16th. The provisions of the 7th article as it seems to me are not in entire accord with our understanding and the point escaped my notice at our previous conferences. According to the structure of the independent lease the agreements which are contained in ss. 1, 2, 3, 4, and 5 are styled conditions, those in 6 are called agreements. Article 7 provides that "if any breach or default shall be made in the observance of any one or more of the conditions herein contained or contained in any other lease or license agreement subsisting between the lessor or the lessee, whether as a result of the assignment to the lessor or otherwise and expressed to be obligatory on the lessee, etc." You

will observe that this makes the rights of the lessee depend not merely on the provisions of this lease but on the provisions of every other lease that he holds. I have had before me leases in a great variety of forms and in some of them things which you call agreements in the independent lease may be called conditions, and a violation therefore of something that neither of us have in mind may give your company the right to terminate every lease which the lessee holds. I do not think this was contemplated. I said that my committee was content if the lessee did not keep the conditions of this lease, that he should lose this lease and all his other leases, but I think you will see that your clause 7 goes further. I would suggest the elimination of the words which I have enclosed in pencil brackets in clause 7, being the words which begin "or contained in any other lease" and end with "upon the lessee." To this I fancy there can be no objection.

The committee have carefully considered the lease and desire only a slight variation. They would like the privilege of changing from the iron clad lease to this lease for two years, that is to say until the 1st of February 1903, and they would like also some guaranty or assurance that the modified lease will continue to be offered to the trade for say five years. If these concessions are made they will recommend the lease to the trade.

I think that there is no very substantial difference between these requests and what you have been willing to concede. It was the purpose of your company as you told me to continue to offer the modified lease for an indefinite time and if this is so five years is not very long time to fix. And as I told you at our discussion, I think the difference between giving the right to change for one year and for two years for you cannot be very material while I think it will make your relations with the trade cordial and enable you to begin business with the feeling that the difficulties between you have been ended. I trust that your committee will adopt this view and thus bring these discussions to a mutually satisfactory end.

A single further suggestion. Mr. Goddard has suggested, and I think very properly, that clause 6 would be improved if the words in the last line but one "covering the term of five years" are inserted

after the word agreement as has been done in the copy which I send. This is merely a description and makes a little more certain what we are referring to.

Yours very truly,

MOORFIELD STOREY.

DEFENDANTS' EXHIBIT 261.

[Put in Evidence, page 3620.]

Taken up by Mr. Howe Jan. 23, 1901, E. P. H. File.

January 22, 1901.

Moorfield Storey, Esq.,

Dear Sir: I have your letter of this date with which you return the "Independent" Lease I submitted to you on the 16th instant. The terms of this lease were settled as you will remember, after an extended conference on the 14th instant between your Committee and Mr. Winslow, at which both you and Mr. Goddard were present, when, as Mr. Winslow and I supposed, all the clauses in the lease which were in dispute, and the letter, dated January 2nd, 1901, from the Committee to the Company refering to such clauses, were discussed, and an agreement reached as to what changes in the lease should be made, except that no definite right was accorded to a lessee under the present United Lease of Metallic Department machinery to change it for an Independent Lease of the same. At our interview on the 15th instant we settled upon the phraseology to express the conclusions reached at the conference on the 14th, and we then agreed that the only question left open for discussion was what length of time should reasonably be given by the Company to its present and prospective lessees of Metallic Department machinery to decide whether to take and retain the United leases, and that was the only question to be considered when Mr. Storrow was called in. Consequently, immediately after our interview on the 15th, I reported to the Executive Committee of the United Shoe Machinery Company that the Independent lease met your approval, but that you suggested that a period of two years should be allowed for lessees who sign the United lease to exchange them for Independent leases, and I assured our Executive Committee that, if your suggestion could be adopted, the Independent lease would be recommended by your Com-

mittee. I therefore urged our Executive Committee to concede a longer period for such exchange of leases than they had intended to offer, and longer than they deemed necessary for any lessee to judge of the relative advantages or disadvantages of the two leases. On my assurance that the Independent lease met your approval, and would be undoubtedly approved by your clients, inasmuch as substantially all the changes suggested by them in their letter of the 2nd instant had been incorporated in it, our Executive Committee finally authorized me to propose that one year from February 1st next should be allowed for such change of leases.

I am therefore disappointed that, in your letter of to-day, the discussion is not confined to the length of time to be afforded for such exchange of leases; and that other points, which have been debated at length and disposed of, are revived. The Company is unwilling to re-open these questions, and declines to accede to the changes suggested in your letter, except that the insertion of the words "covering the term of five years" in Article Six, is unobjectionable.

The Executive Committee have re-considered the request of your Committee that the period for exchange from the United to the Independent lease be extended to February 1, 1903; but for the reasons given in my letter to you of the 16th instant, they adhere to their decision that one year will afford ample time to the trade for the purpose, especially as it should be kept in mind that a lessee by taking an Independent lease can have the entire term of seventeen years to decide whether he wishes to avail of the lower royalty afforded by the United lease.

The Company has been, and will be at all times desirous of continuing the cordial relations with its lessees which have hitherto been maintained, and to that end its executive officers have carefully considered and have endeavored to accede to all the requests and suggestions made by your Committee during the past three months, so far as is consistent with carrying on the business of the Company on a basis which shall insure not only a safe investment for its stockholders, with fair returns thereon, but also, what is equally important to it, the welfare and prosperity of the shoe manufacturers.

Yours very truly,

ELMER P. HOWE.

S. W. Winslow, President, United Shoe Machinery Co., Albany Building, Boston.

Dear Sir: I am directed to inform you that the Committee have voted to accept the draft of lease as submitted by Mr. Howe to Mr. Storey and I herewith enclose a copy of a report which they have prepared to give to the press.

I am, Respectfully yours,

GEO. C. HOUGHTON, Secretary.

Dic. G.C.H. Enclosure.

Shirley Reporter City Editor 1–15

A settlement of the lease controversy has been reached between the United Shoe Machinery Company and a Committee of the New England Shoe & Leather Association together with a Committee of the National Association of Boot & Shoe Manufacturers, by which the Shoe Machinery Company offer to Shoe Manufacturers a choice between the lease as originally drawn, or a modified lease which contains among the several important concessions the right to use metallic fastening machines in connection with lasting, welt sewing or other machines other than those owned and leased by the United Shoe

Machinery Company. To such users the Company may charge, not exceeding 10% more for metallic fastening, than to those who use the entire system of the United Shoe Machinery Company.

The option of selection of either of above leases will not expire until Feb. 1st, 1902, after which there can be no change from the original to the modified lease, except by agreement; but the holder of the modified lease may change to the original at any time, by giving six months notice in writing.

The Committee will at an early date prepare and issue to the trade a detailed report.

Sent to the Press at same time it was sent to us.

H.

All letters to be addressed to the firm.

Boston, 29th January 1901

E. P. Howe, Esq., Exchange Building.

Dear Sir: The Committee of the New England Shoe Manufacturers' Association instructs me to notify you that they will accept the last draft of the Independent lease which you have submitted to them, upon the understanding, at which I think we have arrived, that the persons who have taken your Iron Clad lease pending these negotiations may if they see fit take the Independent lease, and that there shall be attached to the Iron Clad lease a rider authorizing the holder to surrender it and take the Independent lease at any time up to the first day of February 1902. I understand moreover that it is your purpose to offer both leases for an indefinite time thereafter unless something in the business situation leads your company to change its policy.

Please let me hear from you that I have correctly stated our understanding, and oblige, Yours very truly,

Del'd C 30 MOORFIELD STOREY.

[Put in Evidence, page 3692.]

Copy to Mr. Winslow. E. P. H. File.

Boston, Mass., January 29, 1901.

Moorfield Storey, Esq.,

My dear Sir: I beg to acknowledge your favor of this date informing me of the action of the Committee of the New England Shoe Manufacturers' Association concerning the Independent lease offered by the United Shoe Machinery Company. I confirm what I have heretofore stated to you, namely:

1. That any lessee, who pending the negotiations with your Committee, has signed the United lease of Metallic Department machinery (which you refer to as the Iron Clad lease) or any lessee who shall hereafter sign such United lease may, at any time up to February 1st, 1902, upon giving thirty days written notice to the Company, surrender it, if he is not in default thereunder, by executing an Independent lease of the same machinery, and that the United Company upon the request of any such lessee under the United lease will attach a rider to his United lease expressly granting to him the right to exchange it for an Independent lease. A form of such rider is sent herewith.

2. That the United Company intends to offer both the United and the Independent lease for an indefinite time after February 1, 1902.

The Independent lease has been sent to the printer, and as soon as I have a corrected proof, I would like to submit it to you.

Enclosure. Very truly yours,

RIDER FOR "UNITED" METALLIC LEASE.

The lessee, if not in default in respect to any of the conditions, agreements, stipulations and provisions in Lease No.
granted by the undersigned for certain Metallic Department machinery, upon giving at least thirty days notice in writing of his intention so to do, shall have the privilege of surrendering this "United" lease and license at any time before February 1, 1902, by executing the

"Independent" form of lease and license agreement in respect to the leased machinery.

Dated, Boston, Mass., 190

[Put in Evidence, page 2785.]

November 13, 1912.

J. E. Williams, Esq., Vice President and General Manager, Excelsior Shoe Company, Portsmouth, Ohio.

Dear Sir: In reply to your inquiry we beg to say that the use of our machines in the manner which you have indicated to us, in the manufacture of McKay welts, is not in accordance with the conditions under which the machines have been supplied to you. Should you desire to make a change in the conditions on which you hold our machines so as to warrant their use in the manner indicated, we will be glad to take the matter up with you further.

Very truly yours,

UNITED SHOE MACHINERY COMPANY

Portsmouth, Ohio, Nov. 18, 1912.

Fred G. King, Boston, Mass., United Shoe Machinery Co., Goodyear Dept.

Dear Sir: For the benefit of your files, since the question has been raised as to the use of a certain machine in our Ironton Scout plant, would say that immediately upon returning, the writer had the machine withdrawn from operation, and all the work is being done on your machine. If we should decide at any time in the future to change the plan of making these shoes, we will take the question up with you, but at present we are working on a line as per your interpretation of the lease. Yours very truly,

THE EXCELSIOR SHOE CO.

Lease No. *183*

Transfer from Lease No.

This Lease and Agreement, made the *eighteenth* day of *March* A. D. 1897, by and between the Eppler Welt Machine Company, a corporation existing under the laws of the State of Maine, having a place of business at Boston, Massachusetts, Lessor, the party of the first part, and *Geo. H. Burt & Co., doing business at Lynn, Mass.*, Lessee, the party of the second part, witnesseth:

Whereas, the Lessor is now the owner of the following Letters Patent of the United States, viz.:—

No. 325,063, dated Aug. 25, 1885;
No. 387,058, dated July 31, 1888;
No. 387,059, dated July 31, 1888;
No. 417,872, dated March 10, 1891;
No. 487,011, dated Nov. 29, 1892;
No. 487,214, dated Nov. 29, 1892;
No. 409,281, dated Aug. 20, 1889;
No. 498,017, dated May 23, 1893.
No. 507,873, dated Oct. 31, 1893.

And whereas the Lessee desires to use the hereinafter described machines belonging to the Lessor;

Now, therefore, the Lessor, in consideration of one dollar to it paid by the said Lessee, the receipt whereof is hereby acknowledged, and of the stipulations and conditions hereinafter contained on the part of the Lessee to be kept and performed, doth lease unto the said party of the second part the machines designated by their numbers in the following schedule:—

One Eppler Inseam Sewing Machine , No. *112*
One Eppler Outsole Lock Stitch Machine , No. *80*
One Eppler Insole Channeler , No. *67*
Eppler Outsole Channeler , No.
One Eppler Welt Groover and Beveler , No. *84*
One Eppler Welt Splitter , No. *57*
One Eppler Welt Beater , No. *61*
Eppler Channel Lip Turner , No.
Eppler Shank Skiver , No.
One Eppler Bobbin Winder , No. *65*

It is understood that said machines are and shall remain the property of said Eppler Welt Machine Company, and subject to the conditions of this lease and agreement.

And the Lessor doth hereby license the Lessee, and operatives in his employment, to use said machines, upon the terms and conditions hereinafter set forth; provided, however, and this lease is made and this license is granted on the express condition, that the Lessee shall faithfully keep and perform all the conditions and stipulations herein contained on his part to be kept and performed; and upon breach of the same or of any of them by the Lessee, the Lessor, its successors or assigns, may, at their option, cancel and terminate this lease and license; and upon written notice thereof by the Lessor, its successors or assigns, to the Lessee, or to any one in the possession or apparent control of the said machines or any of them, this lease and license shall terminate, and possession of said machines shall thereupon be transferred to said Lessor, its successors or assigns. And the said party of the second part hereby agrees to keep and perform all the following conditions of this lease and license:—

First. The Lessee is by this lease and license authorized to use the machines hereby leased only in said *Lynn, Mass.*, he shall not add to nor substract from the said machines any mechanism whatever now or hereafter organized or connected therewith by the Lessor, nor make, nor allow to be made, any change or alteration in the same, without the consent thereto in writing by the Lessor, nor interfere with the proper operation of the machines, or any mechanism forming a part thereof, or attached thereto, nor remove nor deface any dates, numbers, or inscriptions now or hereafter impressed thereon or affixed thereto by the Lessor.

Second. It shall be lawful for the Lessor, or its duly authorized agent, at all reasonable times to have convenient access to the machines, to examine and inspect the same and the use thereof, and to verify the operator's reports, and to improve the machines, and to affix indicators thereto, as it may see fit; and the covenants, stipulations, and conditions herein contained shall apply to all improvements which the Lessor shall hereafter add to the machines, to indicators now or hereafter affixed thereto, and to all patents hereafter embodied

therein, with the same effect as if said patents were included in the list herein set forth.

Third. The following is the schedule of rents or royalties hereinafter referred to, and which it is understood and agreed is to be paid on each pair of shoes or boots respectively made by the aid of these machines or any of them, or by the use of the said patents or any of them, viz.:—

SCHEDULE OF RENTS AND ROYALTIES.

Children's	3 cents.
Misses'	4 "
Women's	6 "
Youths'	4 "
Boys'	6 "
Men's	8 "

Fourth. The Lessee hereby agrees to keep an account of all boots and shoes sewed by him, or by any other person for him or for others, by the aid of the machines hereby leased, or by the use of the patents aforesaid and to render an account thereof to the Lessor, its successors or assigns, on or before the tenth day of each month; which account shall specify the number of pairs of boots and shoes, made under this lease and license during the calendar month next preceding, and the class to which they belong according to the above schedule; and the said Lessee agrees that he will require the operator or operators on said machines to keep a daily account of all boots and shoes sewed on said machines, upon the printed forms to be furnished by the Lessor, in duplicate; one copy of which, containing such reports for the calendar month preceding, the Lessee agrees to send, on or before the tenth day of each month, to the Lessor; and whenever required by the Lessor, its successors or assigns, to make oath to the correctness of said returns; and to allow the Lessor, its successors, assigns, or authorized agents to examine the original books and accounts of the Lessee, in order to verify the returns aforesaid, and the Lessee agrees to send to the Lessor, on or before the tenth day of each month, in case the machines, or any of them, hereby leased have not been run during the month next preceding, one of the aforesaid printed forms furnished by the Lessor, for each such

machine, signed by the Lessee, and marked across the face with the words "not running" or "not in use."

Fifth. The Lessee agrees to pay unto the Lessor, as rent for the machines hereby leased, the rent or royalty specified in the schedule forming part of Section Third herein, on each pair of boots or shoes of the respective kinds mentioned or described in said schedule made by the aid of the said machines or of any of them, or by the use of the said patents or of any of them; the rents and royalties for all such boots and shoes made as aforesaid during one calendar month, to be due on the first day of the calendar month next following, and to be paid within three months from that day; but the Lessor hereby agrees that **if the rents and royalties due on the first day of any month shall be paid on or before the fifteenth day of that month, it will, in consideration thereof, grant a discount of fifty per cent. from the rents and royalties specified in the schedule aforesaid; and the Lessee further agrees to pay, while he shall retain possession of the machines hereby leased, all taxes thereon, to whomsoever laid or assessed.** The Lessee hereby further agrees that the rents or royalties actually paid by the Lessee for each sewing or stitching machine herein leased shall, in each and every year, during the continuance of this lease, amount in the aggregate to at least one hundred dollars. The Lessee shall also pay the expense of transportation of the machines herein leased from and to the Lessor's premises, and also the expense of keeping said machines in repair; and shall keep said machines and all of them fully insured in the amounts hereinafter mentioned against loss by fire, and in case of loss of or damage to said machines or any of them shall pay to the Lessor or its order upon demand the full amount of such insurance. The insurance upon said machines shall be in the following amounts, to wit:—

Eppler Inseam Sewing Machine . .	$ 250.00
Eppler Outsole Lock Stitch . .	190.00
Eppler Insole Channeler . . .	50.00
Eppler Outsole Channeler . . .	50.00
Eppler Welt Groover and Beveler .	15.00

Eppler Welt Splitter	10.00
Eppler Welt Beater	25.00
Eppler Channel Lip Turner . .	25.00
Eppler Shank Skiver . . .	35.00
Eppler Bobbin Winder . . .	25.00

Sixth. The Lessee hereby agrees that he will not in any way violate, or infringe, or contest the validity of any of the patents he is hereby licensed to use, or the sufficiency of their specifications, or the validity of the title of the Lessor, or of its successors or assigns, to said patents or any of them.

Seventh. This lease and license is not assignable by the Lessee, by his own act or by operation of law.

Eighth. The following are also agreed to by the parties to this instrument as the terms of lease and license of the machines which the Lessee is hereby licensed to use:—

1st. That the power conveyed by this lease and license is only the right to use the said machines, and not the right to make or sell any machine embodying the patents aforesaid, or any of them; and that a transfer or removal of the machines hereby leased, or any of them, can only be made with the consent of the Lessor, its successors or assigns; and that if the Lessee is or becomes at any time, insolvent or bankrupt, or makes an assignment for the benefit of creditors, or if a sale, lease, transfer, or removal of said machines, or any of them, shall be made or attempted by the Lessee, or by operation of law, or by any legal officer, representative, or assignee, as the property of the Lessee, without the written consent of the Lessor, or its successors or assigns, this lease and license shall thereupon terminate and expire; and the Lessor, its successors or assigns, may take possession of said machines without the Lessee having any claim for the repayment of any part of the sum or sums which he may have paid as consideration for the delivery of this lease and license, or for rent or license under this instrument.

2d. The Lessee agrees that the machines hereby leased shall be used only in the manufacture of boots and shoes known in the trade as "Eppler Welts," and that he will not use or permit the use of

said machines, or either or any of them, upon boots or shoes in the manufacture of which any sole or welt sewing machine not leased to him by the Lessor is employed, or for any other purpose, unless the consent in writing of the Lessor shall first have been obtained.

3d. That in case the Lessee refuses or neglects to perform, or violates any of the terms or conditions of this lease and license, the Lessor, its successors or assigns, shall have the right to terminate this lease and license by giving written notice as aforesaid that it has elected so to do; and upon the giving of such notice this lease and license shall be terminated, and the possession of said machines shall thereupon be transferred to the Lessor, its successors or assigns, free and discharged of this lease and license; and the Lessor, its successors or assigns, or its authorized agent or agents, may thereupon enter the premises where said machines may be, and may take and remove the same without being deemed guilty of any trespass; and the Lessee shall have no claim whatever on account of any sum or sums he may have paid for or under this lease or license

4th. That this lease and license shall continue (provided the Lessee complies with the terms and conditions thereof) until the expiration of all the Letters Patent which the Lessee is hereunder licensed to use, or any extensions or renewals of the same, or additional patents; and upon the expiration thereof, the Lessee shall deliver to the Lessor, its successors or assigns, the machines hereby leased, in good order; natural wear and tear alone excepted.

Ninth. In case any other machines than these hereby leased and licensed, embracing any of the inventions patented in the aforesaid Letters Patent, or any of them, or any inventions or improvements for which Letters Patent shall be granted or assigned to the Lessor, shall hereafter come into possession of the Lessee, by exchange or otherwise, without lease or license from the Lessor, its successors or assigns, then in case the Lessor, its successors or assigns, shall so elect, all the covenants herein contained shall apply to such machines, inventions or improvements; and shall govern the parties respective y to the same extent as if the said machines, inventions or improvements had been expressly included in this lease and license. The Lessor

shall give written notice of its election as aforesaid within thirty days after it shall have received written notice from the Lessee of the possession of such machines; but may give such notice without having received notice from the Lessee of the possession of such machines.

Tenth. The Lessee agrees that he will not disturb or interfere with, nor permit any one else to disturb or interfere with, any indicator which now is, or which may be hereafter, placed upon the machines as aforesaid.

Eleventh. All the rights and interests which under this instrument and by reason of the ownership of said machines and patents and patent rights belonging to the Lessor shall be deemed to belong to, and may be enforced in, the names of the Lessor and its successors and assigns, and all the stipulations binding on the Lessee shall be binding on his executors or administrators.

Twelfth. It is agreed that the numbers of the machines named in this lease may be entered herein by the Lessor after signing; and in case the Lessee shall require more than one machine, it is agreed that the termination to words relating to the machines shall be construed and considered as written in the singular or plural, as the number of machines entered in the lease and license may require; and also that this instrument may be used in cases where the party of the second part shall consist of more than one person, and in that case the termination of the words relating to the said party shall be considered as plural or singular, as the sense may require; and that when the party of the second part so consists of several persons, and they sign this lease, either individually or by their firm signature, such signature or signatures shall bind them both jointly and severally to the terms and agreements herein contained.

In Witness whereof, the parties aforesaid have hereunto put their hands and seals; the said parties of the second part binding themselves to all the foregoing agreements, both jointly and severally.

Suits Against Thomas G. Plant

Eq. Nos.	Patents.		Infringing Machines	Bills Filed
749	Grandy	No. 552,834	Toe and Heel Laster	July 28, 1910
751	Pettengill	No. 596,305	Heel Attacher	July 28, 1910
753	Winkley	No. 700,279	Welter	July 28, 1910
764	Lombard	No. 524,446	Toe and Heel Laster	Aug. 11, 1910
766	Bates	No. 921,503 No. 950,986	Clicking Machine	Aug. 13, 1910
768	Cutter	No. 582,579	Loose Nailer	Aug. 13, 1910
775	Arnold	No. 946,591	Stitcher	Sept. 3, 1910
777	Hadaway	No. 963,761	Stitcher	Sept. 3, 1910

Suits Against Thomas G. Plant Company

A. Suits on same patents and same machines as suits listed above.

750	Grandy	No. 552,834	Toe and Heel Laster	July 28, 1910
752	Pettengill	No. 596,305	Heel Attacher	July 28, 1910
754	Winkley	No. 700,279	Welter	July 28, 1910

763	Lombard	No. 524,446	Toe and Heel Laster	Aug. 11, 1910
767	Bates	No. 921,503	Clicking Machine	Aug. 13, 1910
		No. 950,986		
769	Cutter	No. 582,579	Loose Nailer	Aug. 13, 1910
774	Arnold	No. 946,591	Stitcher	Sept. 3, 1910
776	Hadaway	No. 963,761	Stitcher	Sept. 3, 1910
B	Additional suits.			
755	Hadaway	No. 725,077	Welting produced by Welt Slasher & Groover	July 28, 1910
765	Taylor	No. 834,085	Heel produced by Heel Attacher	Aug. 11, 1910

DEFENDANTS' EXHIBIT 271.

[Put in Evidence, page 4219.]

PATENTS OF THE UNITED COMPANY INFRINGED BY THE PLANT MACHINES.

UPPER CLICKING MACHINE

No.	date	Inventor	Date of Application
921,503	May 11, 1909	Bates	
950,986	Mar. 1, 1910	Bates	
1,006,453	Oct. 24, 1911	Ashworth	June 12, 1908
1,010,476	Dec. 5, 1911	Buckminster	June 13, 1908
1,081,751	Dec. 16, 1913	Keats	Mar. 1, 1909
1,004,757	Oct. 3, 1911	Eaton	Mar. 2, 1910

DOUBLE LIP CHANNEL OPENER

No.	date	Inventor
818,774	Apr. 24, 1906	Mitchell

SINGLE LIP CHANNEL OPENER AND EDGE COMPRESSOR

No.	date	Inventor
818,774	Apr. 24, 1906	Mitchell

INNERSOLE FLEXOR

No.	date	Inventor
685,991	Nov. 5, 1901	Knipe
885,244	Apr. 21, 1908	Hadaway
963,708	July 5, 1910	Hadaway

INNERSOLE CLOTH TUCKER AND LIP TRIMMER

No.	date	Inventor	
609,103	Aug. 16, 1898	Keith	
638,010	Nov. 28, 1899	Hadaway	
1,028,982	June 11, 1912	Winkley	May 24, 1906

SOLE ROUNDER

No.	date	Inventor
589,409	Sept. 7, 1897	Breach

GRINDER

No.	date	Inventor	
1,056,419	Mar. 18, 1913	Howe	Mar. 29, 1905

TOP LIFT COMPRESSOR

No.	date	Inventor
781,236	Jan. 31, 1905	Small

PULLER OVER AND TIP MEASURER

No.	date	Inventor	
663,777	Dec. 11, 1900	McFeely	
950,701	Mar. 1, 1910	McFeely	Oct. 31, 1901
1,007,053	Oct. 31, 1911	Bayard	May 17, 1906
1,029,387	June 11, 1912	McFeely	Mar. 28, 1903
597,321	Jan. 11, 1898	Ladd	

RAPID SIDE LASTER

No.	date	Inventor	Date of Application
1,005,234	Oct. 10, 1911	Ladd & Stiggins	Oct. 13, 1902
1,012,742	Dec. 26, 1911	Stiggins	Jan. 28, 1905
1,005,929	Oct. 17, 1911	Bond	Feb. 25, 1907
597,321	Jan. 11, 1898	Ladd	

TOE AND HEEL LASTER

No.	date	Inventor	
524,446	Aug. 14, 1894	Lombard	
552,834	Jan. 7, 1896	Grandy	
935,065	Sept. 28, 1909	Stiggins	
1,030,564	June 25, 1912	Brock	July 19, 1898
1,022,420	Apr. 9, 1912	Jerram	Sept. 26, 1904

Re.13,292	Sept. 19, 1911	Snow	
(Original patent 946,708, Jan. 19, 1910)			
1,002,818	Sept. 12, 1911	Brock	Mar. 19, 1910
571,429	Nov. 17, 1896	Chase	
569,231	Oct. 13, 1896	Ray	

TURN HEEL LASTER

No.	date	Inventor	
552,834	Jan. 7, 1896	Grandy	
935,065	Sept. 28, 1909	Stiggins	
1,030,564	June 25, 1912	Brock	July 19, 1898
1,022,420	Apr. 9, 1912	Jerram	Sept. 26, 1904
Re. 13,292	Sept. 19, 1911	Snow	
(Original patent 946,708, Jan. 19, 1910)			
1,002,818	Sept. 12, 1911	Brock	Mar. 19, 1910

STAPLE TACKER

No.	date	Inventor	
765,650	July 19, 1904	Casgrain	
1,016,930	Feb. 13, 1912	Borden	Jan. 16, 1905

HEEL SEAT NAILER

No.	date	Inventor
765,650	July 19, 1904	Casgrain

WELT SLASHER AND GROOVER

No.	date	Inventor	
885,244	Apr. 21, 1908	Hadaway	
963,708	July 5, 1910	Hadaway	
725,077	Apr. 14, 1903	Hadaway	
1,026,306	May 14, 1912	Eppler	July 20, 1906
1,020,346	Mar. 12, 1912	Eppler	June 20, 1908
Appln. Ser. No. 309,109 filed Mar. 31, 1906, Stanbon			

TACK PULLER & BASTER

No.	date	Inventor
864,532	Aug. 27, 1907	Hadaway
777,795	Dec. 20, 1904	Lyon
545,625	Sept 3, 1895	Fowler & Warren

WELTER

No.	date	Inventor	
700,279	May 20, 1902	Winkley	
993,490	May 30, 1911	Winkley	Mar. 26, 1897

Appln. Ser. No. 247,117 filed Feb. 24, 1905, Eppler

CUSTOM SOLE LAYER

No.	date	Inventor
580,746	Apr. 13, 1897	Winkley
610,314	Sept. 6, 1898	Winkley
935,212	Sept. 28, 1909	Manent
557,744	Apr. 7, 1896	Winkley

ROUGH ROUNDER

No.	date	Inventor
599,602	Feb. 22, 1898	French & Meyer
682,679	Sept. 17, 1901	Fowler

HEEL SEAT DINKER

No.	date	Inventor
613,228	Nov. 1, 1898	Barbour

SHOE CHANNELER

No.	date	Inventor
707,576	Aug. 26, 1902	Fowler
600,883	Mar. 22, 1898	Meyer & French

STITCHER

No.	date	Inventor	
710,613	Oct. 7, 1902	Richardson	
971,014	Sept. 20, 1910	Winkley	Jan. 14, 1905
946,591	Jan. 18, 1910	Arnold	
963,761	July 12, 1910	Hadaway	
704,458	July 8, 1902	Hadaway	

Appln. Ser. No. 321,958 filed June 16, 1906, Nash

LOOSE NAILER

No.	date	Inventor
582,579	May 11, 1897	Cutter
582,580	May 11, 1897	Cutter

1,054,173	Feb. 25, 1913	Casgrain	Sept. 5, 1907
1,053,479	Feb. 18, 1913	Casgrain	Sept. 12, 1908

LEVELER

No.	date	Inventor
540,222	May 28, 1895	Winkley & Phillips
540,223	May 28, 1895	Winkley & Phillips
557,744	Apr. 7, 1896	Winkley
580,746	Apr. 13, 1897	Winkley
610,314	Sept. 6, 1898	Winkley
861,746	July 30, 1907	Mayo
935,212	Sept. 28 1909	Manent

HEEL LOADER

No.	date	Inventor	Date of Application
1,000,957	Aug. 15, 1911	Bates	Aug. 15, 1903
694,656	Mar. 4, 1902	Mayo	
571,931	Nov. 24, 1896	Raymond & Fogg	
662,898	Nov. 27, 1900	Grandy	
663,777	Dec. 11, 1900	McFeely	
566,337	Aug. 25, 1896	Raymond	
596,053	Dec. 28, 1897	Crisp	
1,054,032	Feb. 25, 1913	Raymond	Feb. 20, 1892
1,002,836	Sept. 12, 1911	Gouldbourn	Oct. 13, 1906
776,787	Dec. 6, 1904	Leland	

HEELER

No.	date	Inventor	
884,524	Apr. 14, 1908	Pope	
943,723	Dec. 21, 1909	Webster & Towle	
1,000,957	Aug. 15, 1911	Bates	Aug. 15, 1903
1,009,710	Nov. 21, 1911	Raymond	Feb. 20, 1892
1,054,032	Feb. 25, 1913	Raymond	Feb. 20, 1892
982,550	Jan. 24, 1911	Towle	Oct. 3, 1904
1,019,398	Mar. 5, 1912	Woodward	June 6, 1901
1,000,119	Aug. 8, 1911	Pope & Elliott	May 26, 1898
1,030,654	June 25, 1912	Elliott	Mar. 13, 1902
1,081,917	Dec. 16, 1913	Tripp	Aug. 1, 1907
834,085	Oct. 23, 1906	Taylor	

HEEL ATTACHER ON WOOD LASTS

No.	date	Inventor	
884,524	Apr. 14, 1908	Pope	
943,723	Dec. 21, 1909	Webster & Towle	
1,000,957	Aug. 15, 1911	Bates	Aug. 15, 1903
1,009,710	Nov. 21, 1911	Raymond	Feb. 20, 1892
1,054,032	Feb. 25, 1913	Raymond	Feb. 20, 1892
982,550	Jan. 24, 1911	Towle	Oct. 3, 1904
1,019,398	Mar. 5, 1912	Woodward	June 6, 1901
1,000,119	Aug. 8, 1911	Pope & Elliott	May 26, 1898
1,081,917	Dec. 16, 1913	Tripp	Aug. 1, 1907
834,085	Oct. 23, 1906	Taylor	
596,305	Dec. 28, 1897	Pettengill	
1,030,654	June 25, 1912	Elliott	Mar. 13, 1902

HEEL SLUGGER

No.	date	Inventor	Date of Application
765,650	July 19, 1904	Casgrain	
1,056,419	Mar. 18, 1913	Howe	Mar. 29, 1905

HEEL BREASTER

No.	date	Inventor
636,990	Nov. 14, 1899	Heys

STITCH INDENTER & BURNISHER

No.	date	Inventor	
894,332	July 28, 1908	Krewson	
690,422	Jan. 7, 1902	Hadaway	
855,401	May 28, 1907	Hadaway	
934,434	Sept. 21, 1909	Flynt	
999,161	July 25, 1911	Hadaway	May 17, 1905

STITCH SEPARATOR

No.	date	Inventor
Re. 11,538	May 12, 1896	Hadaway
(Original patent 521,978 June 26, 1894)		

TOP LIFT SCALLOPER

No.	date	Inventor	
1,030,567	June 25, 1912	Busell	Aug. 8, 1906

HEEL WAXER AND BURNISHER

No.	date	Inventor
699,476	May 6, 1902	Beckwith & Pease
743,988	Nov. 10, 1903	Pease
Appln. Ser. No. 320,622 filed June 7, 1906		Pease

SEAT BEADER

No.	date	Inventor	Date of Application
687,225	Nov. 26, 1901	Gordon and Gould	

TREEING MAHINE

No.	date	Inventor	
1,030,810	June 25, 1912	Hansen	Sept. 16, 1902
1,081,907	Dec. 16, 1913	Hansen	Feb. 1, 1905

BRESNAHAN AUTOMATIC SOLE MOLDING MACHINE

No.	date	Inventor
627,122	June 20, 1899	Keighley

KEIGHLEY INSEAM TRIMMER

No.	Date	Inventor
961,200	June 14, 1910	Ashton
968,555	Aug. 30, 1910	Hadaway

DEFENDANTS' EXHIBIT 272.

[Put in Evidence, page 4219.]

INTERFERENCES IN THE PATENT OFFICE BETWEEN APPLICATIONS OWNED BY PLANT AND APPLICATIONS OF UNITED SHOE MACHINERY COMPANY.

(Applications owned by United Company are designated "(United)".)
(" " " Plant " " " "(Plant)".)

Olson	Se. No. 316,304 (United) (patent No. 1,040,393, Oct. 8, 1912)	Interference No. 28127
	v.	Declared Oct. 22, 1907
Heys	Patent No. 860,377 (Plant)	Impression Stitch Machine
Eppler	Se. No .439,487 (United) (patent No. 1,020,346, Mar. 12, 1912)	Interference No. 31306
	v.	Declared Jan. 11, 1910
Stanbon	Se. No. 309,109 (Plant)	Welt Preparing Machine

Allen	Se. No. 450,042 (United) (patent No. 1,027,638, May 28, 1912)	Interference No. 31422 Declared Feb. 1, 1910 Heel Seat Rounding Machine
	v.	
Heys	Se. No. 309,997 (Plant) (patent No. 1,005,545, Oct. 10, 1911)	
Allen	Se. No. 450,042 (United) (patent No. 1,027,638, May 28, 1912)	Interference No. 31657 Declared Mar. 22, 1910 Heel Seat Rounding Machine
	v.	
Phelan	Se. No. 319,709 (Plant) (patent, No. 1,005,573, Oct. 10, 1911)	
Winkley	Se. No. 43,592 (United) (patent No. 961,747, June 14, 1910)	Interference No. 31005 Declared Nov. 2, 1909 Leveling Jack
	v.	
Woodward	Se. No. 327,136 (Plant) (patent No. 1,076,618, Oct. 21, 1913)	
Ladd & Stiggins	Se. No. 127,083 (United) (patent No. 1,005,234, Oct. 10, 1911)	Interference No. 29382 Declared Oct. 6, 1908 Grippers for Lasting Machines
	v.	
Seely	Se. No. 450,941 (Plant) (patent No. 958,187, May 17, 1910)	
Busell	Se. No. 329,732 (United) (patent No. 1,030,567, June 25, 1912)	Interference No. 32078 Declared June 21, 1910 Machine for Concaving Heels
	v.	
McLeod	Se. No. 524,951 (Plant)	
Keats	Se. No. 480,561 (United) (patent No. 1,081,751, Dec. 16, 1913)	Interference No. 31965 Declared June 7, 1910 Presses (Clicking Machine)
	v.	
Stewart	Se. No. 526,760 (Plant) (patent No. 1,030,621, June 25, 1912)	
Ashworth	Se. No. 438,137 (United) (patent No. 1,006,453, Oct. 24, 1911)	Interference No. 31966 Declared June 7, 1910 Presses (Clicking Machine)
	v.	
Stewart	Se. No. 526,760 (Plant) (patent No. 1,030,621, June 25, 1912)	
Engberg	Se. No. 464,137 (United) (patent No. 1,023,826, Apr. 23, 1912)	Interference No. 30644 Declared July 22, 1909 Measure (Tip Measurer for Pulling-Over Machine)
	v.	
Perri	Se. No. 490,216 (United) (patent No. 1,024,019, Apr. 23, 1912)	
	v.	
Heys	(Plant)	
Heys	Patent No. 860,377 (Plant)	Interferences Nos. 26952, Jan. 2, 1907 27259, Mar. 12, 1907
	v.	
Hadaway	Se. No. 224,660 (United) (patent No. 1,003,451, Sept. 19, 1911)	
	v.	
Krewson	Se. No. 211,794 (patent No. 894,332, July 28, 1908)	Impression Stitch Machine

Hadaway	Se. No. 251,383 (United)	Interferences Nos. 26016, 26018 May 8, 1906
	(patent No. 1,003,452, Sept. 19, 1911)	
	v.	
Flynt	Se. No. 231,133 (United)	
	(patent No. 845,939, Mar. 5, 1907)	
	v.	Impression Stitch Machine
Heys	Se. No. 261,490 (Plant)	
Brock	Se. No. 686,319 (United)	Interference No. 31802 Declared Apr. 26, 1910 Lasting Machine
	(patent No. 1,030,564, June 25, 1912)	
	v.	
Phelan	Se. No. 529,313 (Plant)	
Brock	Se. No. 512,907 (United)	Interference No. 31347 Declared Jan. 18, 1910 Lasting Machine
	(patent No. 1,066,375, July 1, 1913)	
	v.	
Phelan	Se. No. 529,313 (Plant)	
Cavanagh	Se. No. 384,511 (United)	Interference No. 29751 Declared Jan. 19, 1909 Machines for Operating on Insoles
	v.	
Plant	(Plant)	
	v.	
Cook		
Hadaway	Se. No. 362,632 (United)	Interference No. 31525 Declared Feb. 23, 1910 Trimming Machine (Shank Trimmer)
	v.	
Moody		
	v.	
Plant	(Plant)	
	v.	
Colber		
Hadaway	Se. No. 362,632 (United)	Interference No. 31854, May 11, 1910 Trimming Machine (Shank Trimmer)
	v.	
Plant	(Plant)	
Hadaway	Se. No. 362,632 (United)	Interference No. 28636 Declared Mar. 3, 1908 Trimming Machine (Shank Trimmer)
	v.	
Perry	Se No. 395,194 (United)	
	(patent No. 1,047,283, Dec. 17, 1912)	
	v.	
Colber		
	v.	
Moody		
	v.	
Plant	(Plant)	
McFeely	Se. No. 372,055 (United)	Interference No. 32056 Pulling-Over Machine Declared June 15, 1910
	v.	
Stewart	Se. No. 343,458 (Plant)	
Towle	Se. No. 226,961 (United)	Interference No. 32021 Declared June 14, 1910 Heel Nailing Machines
	(patent No. 982,550, Jan. 24, 1911)	
	v.	
Stewart	Se. No. 409,142 (Plant)	
	(patent No. 944,389, Dec. 28, 1909)	

Buckminster	Se. No. 438,345 (United) (patent No. 1,010,476, Dec. 5, 1911)	Interference No. 32201 Declared July 19, 1910
	v.	
Keats	Se. No. 480,561 (United) (patent No. 1,081,751, Dec. 16, 1913)	Presses (Clicking Machine)
	v.	
Stewart	Se. No. 526,760 (Plant) (patent No. 1,030,621, June 25, 1912)	

DEFENDANTS' EXHIBIT 273.

[Put in Evidence, page 4220.]

INFRINGEMENT BY PLANT MACHINES OF PATENTS AND APPLICATIONS OF THE UNITED SHOE MACHINERY COMPANY.

DETAILED DISCUSSION.

101 UPPER CLICKING MACHINE (Plant catalog page 14)

The general organization of this machine infringed 17 claims (7, 8, 11, 15, 16, 33, 49, 51, 52, 59, 60, 61, 62, 65, 66, 70 and 71) of patent

921,503 May 11, 1909 Bates

The mechanism (the trough) at the back of the bed to receive and protect the part of the skin not on the bed infringed 7 claims (1, 3, 4, 5, 6, 8 and 9) of patent

950,986 March 1, 1910 Bates

The mechanism of this machine for automatically moving the pressure-applying member laterally after the pressure-applying movement infringed 7 claims (1, 2, 3, 4, 5, 6 and 43) of patent

1,006,453 Oct. 24, 1911 Ashworth (Appln. filed June 12, 1908) (Ashworth was in interference with Stewart application owned by Plant — Ashworth won)

The mechanism in this machine for automatically moving the pressure-applying member laterally to inoperative position and permitting free movement to operative position infringed 6 claims (52, 53, 54, 55, 56 and 57) of patent

1,010,476 Dec. 5, 1911 Buckminster (Appln. filed June 13, 1908) (Buckminster was in interference with Stewart application owned by Plant — Buckminster won)

The specific construction of this machine comprising means oper-

ating independently of the regular operating mechanism of the machine infringed 2 claims (10 and 11) of patent

1,081,751 Dec. 16, 1913 Keats (Appln. filed Mar. 1, 1909) (Keats was in interference with Stewart application owned by Plant and Keats won).

The spring-actuated mechanism in this machine permitting free movement of the pressure-applying member to selected position over the bed and acting to swing it to inoperative position at one side of the bed infringed 5 claims (32, 33, 35, 36 and 37) of patent

1,004,757 Oct. 3, 1911 Eaton (Appln. filed Mar. 2, 1910)

In the aggregate 44 claims were infringed by this machine.

102 DOUBLE LIP CHANNEL OPENER (Plant catalog page 20)

The table and feed wheel mechanism of this machine infringed 2 claims (7 and 8) of patent

818,774 Apr. 24, 1906 Mitchell

103 SINGLE LIP CHANNEL OPENER AND EDGE COMPRESSOR (Plant catalog page 22)

The table and feed wheel mechanism of this machine infringed 2 claims (7 and 8) of patent

818,774 Apr. 24, 1906 Mitchell

104 INNERSOLE FLEXOR (Plant catalog page 26)

The reciprocating knife and intermittently-operated feed wheel of this machine infringed claim 5 of patent

685,991 Nov. 5, 1901 Knipe

The slashing mechanism of this machine for making slits partially through and across the leather infringed 5 claims (5, 10, 16, 17 and 19) of patent

885,244 Apr. 21, 1908 Hadaway

The cutting mechanism making transverse cuts in one side of less depth than the thickness of the leather of this machine infringed 10 claims (1, 2, 4, 9, 10, 11, 12, 13, 14 and 15) of patent

963,708 July 5, 1910 Hadaway

In the aggregate 16 claims were infringed by this machine.

105 INNERSOLE CLOTH TUCKER AND LIP TRIMMER (Plant catalog page 36)

The general organization of this machine infringed 4 claims (1, 4, 5 and 9) of patent

609,103 Aug. 16, 1898 Keith

The canvas tucking mechanism of this machine infringed 4 claims (1, 2, 3 and 5) of patent

638,010 Nov. 28, 1899 Hadaway.

The means for ensuring proper presentation of the work in this machine infringed 11 claims (1, 2, 3, 4, 8, 9, 10, 11, 12, 13 and 14) of patent

1,028,982 June 11, 1912 Winkley (Appln. filed May 24, 1906)

In the aggregate 19 claims were infringed by this machine.

106 Sole Rounder (Plant catalog page 38)

The mechanism acting to clamp the blank and start the rounding operation of this machine infringed claim 10 of patent

589,409 Sept. 7, 1897 Breach

107 Grinder (Plant catalog page 44)

The work guiding mechanism of this machine for presenting the knife to the grinding wheel infringed 10 claims (1, 5, 16, 17, 18, 19, 20, 22, 24 and 25) of patent

1,056,419 Mar. 18, 1913 Howe (Appln. filed Mar. 29, 1905)

108 Top Lift Compressor (Plant catalog page 52)

The product of this machine infringed all the 8 claims of patent

781,236 Jan. 31, 1905 Small

109 Puller Over and Tip Measurer (Plant catalog page 56)

The general organization of this machine infringed 15 claims (1, 14, 29, 54, 55, 56, 57, 58, 59, 60, 112, 122, 124, 126 and 154) of patent

663,777 Dec. 11, 1900 McFeely

This machine was so organized that the upper could be adjusted on the last while it was held under strain by the grippers and the machine would undoubtedly have been operated in this manner in commercial use. When so operated it would infringe 16 other claims of this patent (9, 10, 11, 12, 13, 15, 16, 17, 20, 42, 47, 170, 173, 174, 179, 183).

The mechanism of this machine for longitudinally and trans-

versely stretching the upper infringed 8 claims (69, 73, 74, 75, 76, 78, 79, 94) of patent

950,701 Mar. 1, 1910 McFeely (Appln. filed Oct. 31, 1901)

The mechanism for longitudinally stretching the upper and the tip measuring mechanism of this machine infringed 9 claims (1, 4, 8, 15, 27, 28, 31, 34, 35) of patent

1,007,053 Oct. 31, 1911 Bayard (Appln. filed May 17, 1906)

When operated to adjust the upper on the last to straighten the tip seam, the machine would also infringe 5 additional claims (36, 37, 39, 40, 44) of this patent

1,007,053 Oct. 31, 1911 Bayard (appln. filed May 17, 1906)

The heel rest mechanism in this machine infringed 16 claims (23, 25, 54, 97, 99, 100, 101, 104, 106, 107, 108, 110, 111, 112, 113, 114) of patent

1,029,387 June 11, 1912 McFeely (Appln. filed Mar. 28, 1903)

The mechanism of this machine for effecting the oblique drive of the single fasteners infringed 7 claims (4, 5, 6, 7, 21, 40 and 41) of patent

597,321 Jan. 11, 1898 Ladd

In the aggregate, 76 claims were infringed by this machine.

110 RAPID SIDE LASTER (Plant catalog page 61)

The pincer-actuating mechanism of this machine infringed 2 claims (1 and 15) of patent

1,005,234 Oct. 10, 1911 Ladd & Stiggins (Appln. filed Oct. 13, 1902)

The specific construction of the pincer mechanism also infringed Claim 27 of patent

1,012,742 Dec. 26, 1911 Stiggins (Appln. filed Jan. 28, 1905)

The pincer jaw closing and updraw lever mechanism of this machine infringed 8 claims (1, 2, 3, 4, 5, 6, 7 and 9) of patent

1,005,929 Oct. 17, 1911 Bond (Appln. filed Feb. 25, 1907)

The work presser mechanism of this machine infringed 6 claims (8, 11, 15, 16, 17 and 20) of patent

597,321 Jan. 11, 1898 Ladd

In the aggregate 17 claims were infringed by this machine.

111 TOE AND HEEL LASTER (Plant catalog page 66)

The gripper mechanism on this machine infringed 3 claims (6, 9 and 10) of patent

524,446 Aug. 14, 1894 Lombard (expired Aug. 14, 1911)

The mechanism in this machine for tipping the toe lasting head and heel lasting head laterally infringed Claim 1 of patent

552,834 Jan. 7, 1896 Grandy

The specific construction of the lateral tilting mechanism for the lasting head infringed 4 claims (7, 8, 9 and 12) of patent

935,065 Sept. 28, 1909 Stiggins

The equalizing mechanism of this machine for insuring uniform operation of the end band on right and left shoes infringed 2 claims (68 and 69) of patent

1,030,564 June 25, 1912 Brock (Appln. filed July 19, 1898)

The end band supporting and operating mechanism of this machine infringed 7 claims (26, 27, 28, 82, 83, 84 and 89) of patent

1,022,420 April 9, 1912 Jerram (Appln. filed Sept. 26, 1904)

The wedge-controlled equalizing mechanism of this machine infringed 8 claims (11, 12, 13, 14, 16, 17, 18 and 19) of patent

Reissue 13,292 Sept. 19, 1911 Snow

(Original patent 946,708 Jan. 19, 1910)

This mechanism having a transversely movable equalizer also infringed 20 claims (1, 8, 14, 15, 16, 17, 18, 19, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31 and 32) of patent

1,002,818 September 12, 1911 Brock (Appln. filed Mar. 19, 1910)

The toe rest on this machine, arranged to move with the shoe lengthwise of the shoe to avoid injuring the upper, infringed Claim 26 of patent

571,429 Nov. 17, 1896 Chase

The mechanism of this machine for holding the pad and chain in co-operative relation infringed 3 claims (1, 2 and 5) of patent

569,231 Oct. 13, 1896 Ray

In the aggregate, 49 claims were infringed by this machine.

112 TURN HEEL LASTER (Plant catalog page 70)

The mechanism in this machine for laterally tipping the heel lasting head infringed Claim 1 of patent

552,834 Jan. 7, 1896 Grandy

The mechanism in this machine for tipping the heel lasting head about an axis extending longitudinally of the last bottom infringed 4 claims (7, 8, 9 and 12) of patent

935,065 Sept. 28, 1909 Stiggins

The same equalizing mechanism for the heel band in this machine infringed 2 claims (68 and 69) of patent

1,030,564 June 25, 1912 Brock (Appln. filed July 19, 1898)

The heel band supporting and operating mechanism of this machine infringed 7 claims (26, 27, 28, 82, 83, 84 and 89) of patent

1,022,420 April 9, 1912 Jerram (Appln. filed Sept. 26, 1904)

The wedge-controlled heel band equalizing mechanism of this machine infringed 8 claims (11, 12, 13, 14, 16, 17, 18 and 19) of patent

Reissue 13,292 Sept. 19, 1911 Snow

(Original patent 946,708)

The heel band equalizer mechanism movable transversely of this machine to swing the slide bars, infringed 19 claims (1, 14, 15, 16, 17, 18, 19, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31 and 32) of patent

1,002,818 Sept. 12, 1911 Brock (Appln. filed Mar. 19, 1910)

In the aggregate 41 claims were infringed by this machine.

113 Staple Tacker (Plant catalog page 72)

The reel used on this machine infringed all the 9 claims of patent

765,650 July 19, 1904 Casgrain.

The staple-forming mechanism infringed Claim 5 of patent

1,016,930 Feb. 13, 1912 Borden (Appln. filed Jan. 16, 1905)

In the aggregate, 10 claims were infringed by this machine.

114 Heel Seat Nailer (Plant catalog page 78)

The reel used on this machine infringed all the 9 claims of patent

765,650 July 19, 1904 Casgrain

115 Welt Slasher and Groover (Plant catalog page 82)

In this machine the mechanism for slitting the welt through and partially across the welt infringed 4 claims (5, 16, 17 and 19) of patent

885,244 Apr. 21, 1908 Hadaway

The same mechanism also infringed 11 claims (1, 2, 3, 4 and 9 to 15) of patent

963,708 July 5, 1910 Hadaway

[Take sample] The product of this machine, that is, the slashed welt strip produced by it, infringed the 3 claims of patent

725,077 April 14, 1903 Hadaway

In this machine, the general organization for feeding, guiding and slitting the welt infringed 2 claims (1 and 5) of patent

1,026,306 May 14, 1912 Eppler (Appln. filed July 20, 1906)

The mechanism for guiding varying widths of welts in this machine infringed 10 claims (2, 3, 4, 5, 6, 9, 10, 11, 12 and 13) of patent

1,020,346 Mar. 12, 1912 Eppler (Appln. filed June 20, 1908)

These two Eppler cases were in interference with an application

309,109 Mar. 31, 1906 Stanbon

owned by Plant, but this interference was terminated November 28, 1910, by a concession of priority by Stanbon to Eppler, who was clearly ahead of Stanbon.

In the aggregate, 30 claims were infringed by this machine.

116 TACK PULLER & BASTER (Plant catalog page 84)

The tack-pulling and channel-moistening mechanism of this machine infringed 2 claims (27 and 28) of patent

864,532 Aug. 27, 1907 Hadaway

The tack-pulling mechanism of this machine infringed 2 claims (1 and 4) of patent

777,795 Dec. 20, 1904 Lyon

The feeding mechanism of this machine infringed 1 claim of patent

545,625 Sept. 3, 1895 Fowler & Warren

In the aggregate, this machine infringed 5 claims.

117 WELTER (Plant catalog page 86)

The welt-holding and cutting mechanism of this machine infringed 2 claims (1 and 6) of patent

700,279 May 20, 1902 Winkley.

This infringing mechanism was one of the valuable features of the Plant Welter, as has been fully explained in Mr. Winslow's testimony. This mechanism was greatly improved upon by the United Company's inventors and the improved mechanism as now embodied in the United Company's standard Model K Welt and Turn Machine, embodies, first, this broad Winkley invention which had not been developed to a point of commercial success, second, the valuable

Plant inventions constituting the first commercially successful mechanism for accomplishing this purpose and, third, valuable improvements on the Plant mechanism made by the United Company's inventors.

The thread arm of this machine infringed claim 24 of patent
993,490 May 30, 1911 Winkley (Appln. filed Mar. 26, 1897)

The eccentric mounting of the welt guide, awl and needle of this machine infringes allowed claim 11 of application
247,117 Feb. 24, 1905 Eppler

In the aggregate, 4 claims were infringed by this machine.

118 CUSTOM SOLE LAYER (Plant catalog page 96)

The jack and toe rest of this machine infringed claim 2 of patent
580,746 Apr. 13, 1897 Winkley

The mechanism in this machine for regulating the pressure of the levelling form on the shoe infringed 2 claims (1 and 2) of patent
610,314 Sept. 6, 1898 Winkley

The mechanism in this mechane for securing the form to the form carrier infringed claim 1 of patent
935,212 Sept. 28, 1909 Manent

The mechanism in this machine for proportionately moving the toe and heel supports to properly locate the shank of the shoe infringed 2 claims (3 and 23) of patent
557,744 Apr. 7, 1896 Winkley

In the aggregate, 6 claims were infringed by this machine.

119 ROUGH ROUNDER (Plant catalog page 100)

The means for automatically operating the mechanism for securing the desired contour for the sole infringed Claim 17 of patent
599,602 Feb. 22, 1898 French & Meyer

The pattern mechanism for determining the contour to be given to the edge of the sole infringed Claim 6 of patent
682,679 Sept. 17, 1901 Fowler

120 HEEL SEAT DINKER (Plant catalog page 102)

The general organization of this machine which enables the knife to conform to the heel seat infringed Claim 2 of patent
613,228 Nov. 1, 1898 Barbour

This claim goes to the essence of the machine.

121 SHOE CHANNELER (Plant catalog page 106)

The feed wheel and edge guide of this machine infringed Claim 8 of patent

707,576 Aug. 26, 1902 Fowler

The mechanism in this machine for positioning the channeling knife nearer to or farther from the sole edge infringed Claim 9 of patent

600,883 Mar. 22, 1898 Meyer & French

In the aggregate, 2 claims were infringed by this machine.

122 STITCHER (Plant catalog page 112)

The presser foot mechanism of this machine infringed Claim 16 of patent

710,613 Oct. 7, 1902 Richardson

This mechanism also infringed 3 claims (1, 2 and 6) of patent

971,014 Sept. 20, 1910 Winkley (Appln. filed Jan. 14, 1905)

This presser foot mechanism also infringes 5 claims (allowed claims 3, 5, 7, 10 and 12) of application

321,958 June 16, 1906 Nash

The fudge stitch mechanism of this machine infringed 2 claims (1 and 4) of patent

946,591 Jan. 18, 1910 Arnold

This fudge stitch mechanism also infringed 3 claims (1, 2 and 3) of patent

963,761 July 12, 1910 Hadaway

The gage mechanism in this machine, movable with the feed, infringed Claim 10 of patent

704,458 July 8, 1902 Hadaway

In the aggregate 15 claims were infringed by this machine.

123 LOOSE NAILER (Plant Catalog page 118)

The horn operating mechanism of this machine infringed 2 claims (22 and 23) of patent

582,579 May 11, 1897 Cutter

The horn controlling mechanism also infringed Claim 1 of patent

582,580 May 11, 1897 Cutter

This horn controlling mechanism also infringed 8 claims (40, 41, 42, 43, 44, 45, 46 and 47) of patent

1,054,173 Feb. 25, 1913 Casgrain (Appln. filed Sept. 5, 1907)

This horn controlling mechanism also infringed 17 claims (186 to 202 inclusive) of patent

1,053,479 Feb. 18, 1913 Casgrain (Appln. filed Sept. 12, 1908)

In the aggregate, 28 claims were infringed by this machine.

124 LEVELLER (Plant catalog page 120)

The general organization of this machine infringed 3 claims (1, 2 and 4) of patent

540,222 May 28, 1895 Winkley & Phillips

The twin jack presenting mechanism of this machine also infringed Claim 1 of patent

540,223 May 28, 1895 Winkley & Phillips

The proportional movements of heel and toe rest in this machine infringed 2 claims (3 and 23) of patent

557,744 Apr. 7, 1896 Winkley

The jack and toe rest of this machine infringed Claim 2 of patent

580,746 Apr. 13, 1897 Winkley

The pressure-regulating mechanism of this machine infringed 2 claims (1 and 2) of patent

610,314 Sept. 6, 1898 Winkley

The machine infringed 2 claims (3 and 4) of patent

861,746 July 30, 1907 Mayo

The devices for securing the form to the form carrier in this machine infringed Claim 1 of patent

935,212 Sept. 28, 1909 Manent

In the aggregate 12 claims were infringed by this machine.

125 HEEL LOADER (Plant catalog page 122)

The general construction and organization of this machine for driving nails obliquely into the heel infringed 9 claims (31, 32, 33, 43, 44, 45, 46, 47 and 48) of patent

1,000,957 Aug. 15, 1911 Bates (Appln. filed Aug. 15, 1903)

The general organization and nail supplying mechanism of this machine infringed 4 claims (9, 43, 44 and 50) of patent

694,656 Mar. 4, 1902 Mayo

The general organization of nail-supplying mechanism of this

machine infringed 10 claims (16, 19, 48, 49, 50, 51, 52, 55, 57 and 58) of patent

571,931 Nov. 24, 1896 Raymond & Fogg

The nail clearer and striker of this machine infringed Claim 5 of patent

662,898 Nov. 27, 1900 Grandy

The nail separator mechanism of this machine infringed Claim 166 of patent

663,777 Dec. 11, 1900 McFeely

The general organization of the nail-distributing mechanism of this machine infringed Claim 6 of patent

566,337 Aug. 25, 1896 Raymond

This nail-distributing mechanism also infringed 6 claims (1 to 6) of patent

596,053 Dec. 28, 1897 Crisp

The blank holder on this machine infringed 4 claims (10, 11, 12, and 14) of patent

1,054,032 Feb. 25, 1913 Raymond (Carr executor of the will of Raymond) (Division of application filed in 1892)

The rotatable three-arm heel holder of this machine infringed 12 claims (16, 17, 18, 19, 20 21, 22, 24, 25, 26, 27 and 28 of patent)

1,002,836 Sept. 12, 1911 Gouldbourn (Appln. filed Oct. 13, 1906)

The heel feeding and ejecting mechanism infringed Claim 5 of patent

776,787 Dec. 6, 1904 Leland

In the aggregate, 49 claims were infringed by this machine.

127 HEELER (Plant catalog page 126)

This was Plant's machine for attaching heels on McKay sewed shoes.

The top-lift holder used on these machines infringed 5 claims (4, 7, 11, 13 and 15) of patent

884,524 Apr. 14, 1908 Pope

The top-lift cementing attachment on these machines infringed 3 claims (10, 20 and 23) of patent

943,723 Dec. 21, 1909 Webster & Towle

The nailing mechanism arranged to drive nails inclined rearwardly infringed 17 claims (26, 27, 28, 29, 30, 31, 32, 33, 34, 37, 38, 39, 40, 41, 42, 45 and 46) of patent

1,000,957 Aug. 15, 1911 Bates (granted on an application filed as a division of an application which was filed in 1903)

The top-lift holder as a whole in this machine infringed 12 claims (13 to 24) of patent

1,009,710 Nov. 21, 1911 Raymond (Appln. filed Feb. 20, 1892)

The specific construction of gages on the top-lift holder in this machine infringed 6 claims (9, 10, 11, 12, 13 and 14) of patent

1,054,032 Feb. 25, 1913 Raymond (Carr executor of will of Raymond application 422,320 filed Feb. 20, 1892)

The specific construction of back gages on the toplift holder infringed 2 claims (33 and 34) of patent

982,550 Jan. 24, 1911 Towle

The Towle application was in interference with a Stewart application owned by Plant and Towle won the interference.

The organization in this machine, by which the top-lift holder engaged a flat abutment on the head for the spanking operation infringed 7 claims (27, 31, 32, 33, 35, 36 and 38) of patent

1,019,398 Mar. 5, 1912 Woodward (Appln. filed June 6, 1901)

The mechanism for imparting positive pressure to the heel and the separate trains of mechanism for applying pressure and for actuating the drivers infringed 16 claims (1, 6, 11, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26 and 27) of patent

1,000,119 Aug. 8, 1911 Pope & Elliott (Appln. filed May 26, 1898)

The mechanism in this machine for attaching a heel and top-lift to a shoe and regulating the pressure for the top-lift attaching operation infringed 4 claims (1, 31, 45, and 46) of patent

1,030,654 June 25, 1912 Elliott (Appln. filed Mar. 13, 1902)

The stop in this machine for preventing displacement of the heel toward the rear while the nails are being driven infringed 7 claims (11, 12, 13, 14, 15, 16 and 17) of patent

1,081,917 Dec. 16, 1913 Tripp (Appln. filed Aug. 1, 1907)

In the aggregate, the Plant Heeling Machines infringed 79 claims.

Also all shoes made on Plant's Heeling Machines infringed the 3 claims of patent

834,085 Oct. 23, 1906 Taylor

126 HEEL ATTACHER ON WOOD LASTS (Plant catalog page 125)

This machine was designed by Plant and was used in the Thomas G. Plant factory for attaching the heels of welt shoes The machine was a reorganization of the "Heeler" to produce a machine adapted for attaching the heels of shoes while still on the last and comprised elaborate mechanism to enable the machine to attach the heels of welt shoes without breaking lasts.

The Heel Attacher on Wood Lasts infringed the same patents which were infringed by the Heeler, as follows:

The top-lift holder used on these machines infringed 5 claims (4, 7, 11, 13 and 15) of patent

884,524 Apr. 14, 1908 Pope

The top-lift cementing attachment on these machines infringed 3 claims (10, 20 and 23) of patent

943,723 Dec. 21, 1909 Webster & Towle

The nailing mechanism arranged to drive nails inclined rearwardly infringed 17 claims (26, 27, 28, 29, 30, 31, 32, 33, 34, 37, 38, 39, 40, 41, 42, 45 and 46) of patent

1,000,957 Aug. 15, 1911 Bates (granted on an application filed as a division of an application which was filed in 1903)

The top-lift holder as a whole in this machine infringed 12 claims (13 to 24) of patent

1,009,710 Nov. 21, 1911 Raymond (Appln. filed Feb. 20, 1892)

The specific construction of gages on the top-lift holder in this machine infringed 6 claims (9, 10, 11, 12, 13 and 14) of patent

1,054,032 Feb. 25, 1913 Raymond (Carr executor of the Will of Raymond) (Division of Raymond application 422,320 filed Feb. 20, 1892)

The specific construction of back gage on the top-lift holder infringed 2 claims (33 and 34) of patent

982,550 Jan. 24, 1911 Towle (Appln. filed Oct. 3, 1904)

The Towle application was in interference with a Stewart application owned by Plant and Towle won the interference.

The organization in this machine, by which the top-lift holder engaged a flat abutment on the head for the spanking operation infringed 7 claims (27, 31, 32, 33, 35, 36 and 38) of patent

1,019,398 Mar. 5, 1912 Woodward (Appln. filed June 6, 1901)

The mechanism for impart ng positive pressure to the heel and the separate trains of mechanism for applying pressure and for actuating the drivers infringed 16 claims (1, 6, 11, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26 and 27) of patent

1,000,119 Aug. 8, 1911 Pope & Elliott (Appln. filed May 26, 1898)

The stop in this machine for preventing displacement of the heel toward the rear while the nails are being driven infringed 7 claims (11, 12, 13, 14, 15, 16 and 17) of patent

1,081,917 Dec. 16, 1913 Tripp (Appln. filed Aug. 1, 1907)

Also all shoes made on Plant's Heel Attacher on Wood Lasts infringed the 3 claims of patent

834,085 Oct. 23, 1906 Taylor

In addition to the infringem nts noted above, the Heel Attacher on Wood Lasts also infringed other patents owned by the United Company, as follows:

The last support used on these machines infringed 5 claims (1, 3, 4, 8 and 10) of patent

596,305 Dec. 28, 1897 Pettengill

The pressure controlling and heel measuring mechanism infringed 10 claims (1, 28, 31, 45, 46, 50, 51, 52, 53 and 54) of patent

1,030,654 June 25, 1912 Elliott (Appln. filed Mar. 13, 1902)

In the aggregate 90 claims were infringed by this machine.

The patents infringed by the Plant Heeler and the Plant Heel Attacher on Wood Lasts covered both these machines so thoroughly that by no possibliity could they have been changed to avoid infringement. Plant's only course would have been to junk the machines and begin over again.

128 HEEL SLUGGER (Plant catalog page 128)

The reel used on this machine infringed all the 9 claims of patent

765,650 July 19, 1904 Casgrain

The knife grinding mechanism of this machine infringed 4 claims (1, 11, 16 and 17) of patent

1,056,419 March 18, 1913 Howe (Appln. filed March 29, 1905)

In the aggregate 13 claims were infringed by this machine.

129 HEEL BREASTER (Plant catalog page 130)

The mechanism in this machine for automatically varying the knife movement in accordance with the thickness of the sole infringed 2 claims (14 and 21) of patent

636,990 Nov. 14, 1899 Heys

130 STITCH INDENTER & BURNISHER (Plant catalog page 140)

The organization of the work-indenting tool with relation to the work support and tool movement of this machine infringed 5 claims (9 to 13) of patent

894,332 July 28, 1908 Krewson

There was an interference between the application for the Krewson patent (then owned by Booth Brothers) and a Heys application owned by Plant. A settlement of this interference was effected in accordance with which a license was given to Plant under and limited to the issues of the interference. Claims 9 to 13 were none of them issues of the interference and are directed to different subject-matter.

The mechanism in this machine for varying the angle of tool action on the work infringed Claim 4 of patent

690,422 Jan. 7, 1902 Hadaway

The general organization of this machine for rolling the tool back and forth while in contact with the work infringed 2 claims (3 and 11) of patent

855,401 May 28, 1907 Hadaway

The same general organization including the movement of the tool in a direction approaching the work in the line of feed infringed 4 claims (1, 2, 7 and 8) of patent

934,434 Sept. 21, 1909 Flynt

The mechanism in this machine for indenting the work by repeated blows infringed 5 claims (1, 2, 5, 9 and 10) of patent

999,161 July 25, 1911 Hadaway (Appln. filed May 17, 1905)

In the aggregate, 17 claims were infringed by this machine.

131 STITCH SEPARATOR (Plant catalog page 142)

The automatic action of the indenting tool in locating the stitches in this machine infringed 4 claims (2, 10, 13 and 14) of reissued patent

Reissue 11,538 May 12, 1896 Hadaway
(Original patent 521,978 June 26, 1894)

132 Top Lift Scalloper (Plant catalog page 148)

The mechanism in this machine for locating the heel with relation to the knife infringed 7 claims (1, 2, 3, 10, 13, 15 and 16) of patent

1,030,567 June 25, 1912 Busell (Appln. filed Aug. 8, 1906)

Claims 1, 10 and 15 were the issues of an interference between the Busell application and the McLeod application, owned by Plant, which interference was won by Busell.

133 Heel Waxer and Burnisher (Plant catalog page 152)

The general organization of this machine for heating, applying and spreading the wax upon the wheel infringed 6 claims (1, 9, 11, 16, 20 and 21) of patent

699,476 May 6, 1902 Beckwith & Pease

This waxing mechanism also infringed Claim 7 of patent

743,988 Nov. 10, 1903 Pease

These two patents may be regarded as pioneer patents on the modern method of finishing heels.

This machine also infringes allowed Claim 5 of application

320,622 June 7, 1906 Pease

In the aggregate, 8 claims were infringed by this machine.

134 Seat Beader (Plant catalog page 154)

The general organization in this machine of beading tool and work support to position the heel and cause the tool to travel around the heel infringed 2 claims (1 and 9) of patent

687,225 Nov. 26, 1901 Gordon & Gould

135 Treeing Machine (Plant catalog page 160)

The general mechanical organization of this machine for bringing the trees into operative position infringed 10 claims (1, 4, 41, 42, 43, 44, 45, 46, 47, 48) of patent

1,030,810 June 25, 1912 Hansen (Appln. filed Sept. 16, 1902)

The machine also infringed Claim 66 of patent

1,081,907 Dec. 16, 1913 Hansen (Appln. filed Feb. 1, 1905)

In the aggregate, 11 claims were infringed by this machine.

136 BRESNAHAN AUTOMATIC SOLE MOLDING MACHINE

All the sole molding in the Thomas G. Plant factory was being done on Bresnahan Automatic Sole Molding Machines which were manufactured and put out by the Bresnahan Shoe Machinery Company, two-thirds of the stock of which was owned by Thomas G. Plant. This machine infringed Claim 2 of patent

627,122 June 20, 1899 Keighley

which was owned by the United Shoe Machinery Company. The United Company had brought suit against the Bresnahan Shoe Machinery Company on this patent

Equity No. 1772, United Shoe Machinery Company v. Bresnahan Shoe Machinery Company, et al.

137 KEIGHLEY INSEAM TRIMMER

While this machine is not shown in the Plant Catalog, there were about ten of these machines being used in the shoe factory of the Thomas G. Plant Company, and as Plant had made a contract subject to cancellation on six months' notice by either party, with the Keighley Company, Inc., for the purchase by Plant of thirty of these machines per year, it is fair to consider that by this contract Plant had made the Keighley machine one of his own.

The machine infringed Claims 1 and 2 of patent

961,200 June 14, 1910 Ashton

and Claims 12 to 19, inclusive, of patent

968,555 Aug. 30, 1910 Hadaway

Suits were brought by the United Company on these patents against the George H. Snow Company of Brockton, Massachusetts, a user of the Keighley Inseam Trimmer, as follows—:

Equity No. 795, bill filed Oct. 18, 1910, Ashton patent No. 961,200

Equity No. 796, bill filed Oct. 18, 1910, Hadaway patent No. 968,555

After the filing of these suits, and several months after the acquisition of the Plant patents by the United Company, Keighley changed all of his machines including those in the Plant factory, in an attempt to avoid the infringement. The substituted construction clearly infringed claims 1 and 2 of patent

961,200 June 14, 1910 Ashton

and another suit for infringement of that patent by the changed machine was brought against the George H. Snow Company:

Equity No. 311 Bill filed Feb. 3, 1912

Including the two machines last discussed, the Bresnahan Automatic Sole Molding Machine and the Keighley Inseam Trimmer, which it seems fair to consider that Plant had adopted as his own, the first through his stock control of the Bresnahan Shoe Machinery Company and the second through his contract with The Keighley Company, then the aggregate of infringements will be increased so that thirty-seven Plant machines, including practically all of his important machines, infringed 539 claims in ninety-nine patents and 7 claims allowed in three pending applications, amounting in the aggregate to 546 claims in 102 patents and pending applications. If, as before, each patent and each claim be counted for each machine which infringed it, the aggregate would be 708 claims of 132 patents and applications.

DEFENDANTS' EXHIBIT 274.

[Put in Evidence, page 4220.]

INFRINGEMENT OF PLANT PATENTS BY COMMERCIAL AND EXPERIMENTAL MACHINES OF THE UNITED COMPANY.

The United Company's machines infringed Plant patents as follows:

141 Lockstitch Machine — Model K: Goodyear Outsole Rapid

This machine was adopted in May 1910 as the United Company's standard outsole stitcher.

The fudge stitch mechanism of this machine infringed 5 claims (1, 2, 4, 5 and 9) of patent

940,723 Nov. 23, 1909 Plant

and 2 claims (9 and 10) of patent

940,725 Nov. 23, 1909 Plant

The means for protecting the upper from injury by the stitch forming mechanism, as originally designed for this machine, infringed patent

940,055 Nov. 16, 1909 Plant

The construction of the machine was changed to avoid this infringement. After the acquisition of the Plant patents, the original construction was re-adopted and has been used ever since.

142 LASTING MACHINE: No. 5 U. S. M. Co.

The automatic unlocking device for the jack post elevating hand wheel of the No. 5 Lasting Machine infringed 5 claims (13, 14, 15, 16 and 18) of patent

957,949 May 17, 1910 Glass

and claim 52 of patent

958,280 May 17, 1910 Plant

The heel band equalizing means of the No. 5 Lasting Machine is a direct infringement of 4 claims (46, 47, 48 and 50) of said patent

958,280 May 17, 1910 Plant

although the validity of those claims is questionable.

In 1908 the United Company found it necessary to make an improvement in the No. 5 Lasting Machine as it was then being put out in order to enable the machine to do its work properly. A construction accomplishing the desired results was devised and embodied in an experimental machine which was put out for a shoe factory test. Our validity search disclosed a British patent, application for which was filed by Plant in 1906, through which we became aware that a similar improvement had been made by one of Plant's inventors. In view of the probability that a United States application was pending we abandoned our construction and conducted further experiments. Two unsatisfactory constructions were devised before we succeeded in producing a commercially successful construction which we believed did not embody the Plant invention.

An experimental hold-down applied by us to the No. 5 Lasting Machine in Brockton infringed claim 24 of patent

957,949 May 17, 1910 Glass

and claim 51 of patent

958,280 May 17, 1910 Plant.

We were obliged to change our construction to avoid the infringement.

143 LOADING & ATTACHING MACHINE — MODEL B: MCKAY AUTOMATIC HEEL

This machine infringed 2 claims (10 and 11) of patent

958,282 May 17, 1910 Plant.

144 NAILING MACHINE: AMERICAN LIGHTNING

In January 1910, our inventor, J.H. Pope, began the construction

of an improved form of nailing mechanism for the Lightning Heeling Machine. After the mechanism had been constructed it was found to infringe 2 claims (15 and 16) of patent

958,302 May 17, 1910 Plant

and the Patent Department advised that manufacture of this improvement could not be authorized.

On September 29, 1910, after the acquisition of the Plant patents, the Patent Department advised that there was no longer any objection to putting out this mechanism and since then a large number of machines have been put out which embody this mechanism, which is a distinct improvement on the machine.

145 ROUNDING & CHANNELING MACHINE — MODEL E: GOODYEAR UNIVERSAL

This machine infringed 4 claims (51–54) of Plant's patent

878,478 Feb. 4, 1908 English

Two of these claims were directed to vital features of the machine.

As first designed this machine infringed 3 claims (18, 20 and 21) of Plant's patent

878,478 Feb. 4, 1908 English

A validity search on these claims was made which indicated that they were valid. A great deal of difficulty and much expense was incurred in changing the machine to avoid these claims.

146 ROUNDING MACHINE: GOODYEAR HEEL SEAT

On February 1, 1910, interferences were declared involving two applications of J. V. Allen, who invented the United Company's Goodyear Heel Seat Rounder, and two applications on the Plant Heel Seat Dinker

309,997 Apr. 5, 1906 Heys (Patent 1,005,545, Oct. 10, 1911)

319,709 June 1, 1906 Phelan (" 1,005,573, Oct. 10, 1911)

The interference proceedings showed that Heys and Phelan were clearly entitled to claims covering broadly mechanism which was vital to our machine and that undoubtedly Plant would eventually obtain patents dominating our machines. Vigorous efforts were made to redesign the machine so as to avoid the claims allowed in the Heys and Phelan applications but in no way could the broad claims

be avoided and as this mechanism was indispensable, it was decided to discontinue the machine and to withdraw as soon as possible the machines already out.

As noted elsewhere, the Plant Heel Seat Dinker infringed our patent

613,228 Nov. 1, 1898 Barbour

and suit would have been brought on that patent.

The result of this situation was of course a complete deadlock and if the interests had not combined, shoe manufacturers would not have been supplied with this machine. After the Plant patents were acquired the Goodyear Heel Seat Rounder was again adopted and put into extensive commercial use.

147 INDENTING & BURNISHING MACHINE: GOODYEAR WELT

The work supporting mechanism of this machine infringed 3 claims (1, 2 and 6) of patent

860,377 July 16, 1907 Heys.

148 GROOVING & BEVELING MACHINE: GOODYEAR POWER WELT

This machine prima facie infringed claim 3 of Plant's patent

966,484 Aug. 9, 1910 Stanbon

but it is believed that that claim is invalid.

149 MOLDING MACHINE: STITCHDOWN UPPER

This machine infringed 4 claims (4, 7, 28 and 37) of patent

871,963 Nov. 26, 1907 Stewart

and infringed 3 claims (1, 2 and 4) of patent

871,966 Nov. 26, 1907 Stewart.

150 CHANNELING MACHINE: GOODYEAR UNIVERSAL (TURN WORK)

The mechanism which was known as the Wald tension release and which was supplied for this machine on special order for turn work infringed the terms of claim 58 of patent

878,478 Feb. 4, 1908 English

151 PULLING OVER MACHINE — MODEL B: REX

This machine is a combined pulling over and lasting machine for turn work. We were very anxious to put on this machine a tip measuring device for which there was insistent demand from the trade, but this could not be done because such a device would infringe claim 55 of Plant's patent

957,955 May 17, 1910 Heys

Immediately upon acquisition of the Plant patents this device was adopted and put out commercially.

152 PULLING OVER & LASTING MACHINE FOR WELT WORK

The transversely adjustable toe gripper mechanism which has been used for several years on the experimental welt pulling over and lasting machine which we were in 1910 and still are developing and which we considered indispensable in that machine, infringed a large number of allowed claims in a pending application owned by Plant

343,458 Nov. 14, 1906 Stewart.

We became aware of this application through an interference in the Patent Office which was declared between it and one of our applications. We should have been prevented from further developing this machine and from putting it out commercially if we had not acquired the Plant patents.

We are now developing another pulling over and lasting machine of entirely different design which is intended for lasting McKay sewed as well as welt shoes and this Plant toe gripper mechanism is also incorporated in this new machine.

153 SHOE MACHINE — MODEL M: GOODYEAR WELT & TURN

This is an experimental welting machine upon which one of the Company's inventors has been at work for many years and it is expected that it will be a much faster machine than any welting machine heretofore produced. This machine, however, prima facie infringed 3 claims (48, 49 and 53) of patent

947,401 Jan. 25, 1910 Plant

There is also a prima facie infringement by the looper mechanism of this machine of 2 claims (9 and 11) of Plant's patent

524,338 Aug. 14, 1894 Mills.

Two of the United Company's machines infringed patents owned by the Bresnahan Shoe Machinery Company which Plant controlled through ownership of two-thirds of the stock of that company.

154 WHEELING MACHINE NO. 2: GOODYEAR IMPRESSION STITCH

This machine infringed 2 claims (2 and 5) of a patent owned by the Bresnahan Shoe Machinery Company

784,263 Mar. 7, 1905 Heys.

155 LEVELING MACHINE — MODEL B: HERCULES

This machine infringed 3 claims (10, 11, and 13) of a patent owned by the Bresnahan Shoe Machinery Company

684,239 Oct. 8, 1901 Heys

It also infringed claim 11 of another patent owned by the Bresnahan Shoe Machinery Company

707,414 Aug. 19, 1902 Heys

The Bresnahan Shoe Machinery Company had brought suit for infringement by the Hercules Leveling Machine of this patent, as follows:

Eq. No.	Patent	Infringing Machine	Bill Filed
286	Heys No. 707,414	Leveling Machine	Aug. 9, 1906

DEFENDANTS' EXHIBIT 275.

[Put in Evidence, page 4222.]

GODDU SONS METAL FASTENING COMPANY

In addition to the pending suit which had been brought under Louis Goddu's contracts by the trustees of the McKay Metallic Fastening Association against Louis Goddu, his sons, Albert Van Wagenen and the Goddu Sons Metal Fastening Company,

Equity No. 985 James W. Brooks, et al.

v.

Goddu Sons Metal Fastening Company, et al.

the McKay Shoe Machinery Company had caused to be prepared bil's of complaint and affidavits to accompany motions for preliminary injunctions in suits for infringements of its patents by all of the machines of the Goddu Sons Metal Fastening Company Affidavits of James W. Brooks, Franklin O. Tobey and Joseph P. Livermore, covering all of the machines, and the b ll of complaint in the proposed suit against the Goddu Sons' Loose Nailer, had been printed prior to the formation of the United Company and printed copies constitute Defendant's Exhibit No. 101.

According to Mr. Livermore's affidavit the infringements were as follows:

(1) Goddu Sons' Loose Nailer infringed the following patents of McKay Metallic Fastening Association:

383,455 May 29, 1888 L.Goddu (cls. 1, 7 & 8)

265,227 Sept. 26, 1882 L. Goddu (cls. 3, 17 & 18)

493,910 Mar. 21, 1893 Cummings & Coupal (cl. 2)

356,107 Jan. 18, 1887 Dunham (cls. 1, 2, 3, 5 & 6)

385,802 July 10, 1888 L. Goddu (cl. 7)

289,103 Nov. 27, 1883 Hopkins (cl. 1)

(2) Goddu Sons' Screw Machine infringed the following patents:

265,227 Sept. 26, 1882 L. Goddu (cls. 17 & 18)

403,835 May 21, 1889 L. Goddu (cls. 10, 11, 12, 18 & 26)

(3) Goddu Sons' Slugging Machine infringed the following patents:

383,455 May 29, 1888 L. Goddu (cls. 7, 8 & 9)

563,478 July 7, 1896 L. Goddu (cl. 4)

(4) Goddu Sons' String Nailer infringed the following patents:

490,625 Jan. 24, 1893 L. Goddu (cls. 12 & 13)

383,455 May 29, 1888 L. Goddu (cls. 7 & 8)

385,802 July 10, 1888 L. Goddu (cl. 7)

All of the patents enumerated above were owned by the trustees of the McKay Metallic Fastening Association, one of the predecessors in business of the McKay Shoe Machinery Company.

In addition to the infringements above discussed, after the purchase from Louis Goddu and his sons of their stock in the Goddu Sons' Metal Fastening Company and of the patents and applications which were owned by the sons individually, machines of the Goddu Sons' Company further infringed patents and applications which had been owned by the sons individually and had been acquired from them by the United Company, as follows:

The Goddu Sons' String Nail Tacker infringed all of the 12 claims, except claim 8, of patent

584,735 June 15, 1897 W. Goddu

This machine also infringed all 4 claims of patent

614,460 Nov. 22, 1898 L. H. Goddu

The string nail wire which was intended and adapted for use on this machine infringed all 3 claims of patent

641,099 Jan. 9, 1900 G. Goddu

The Goddu Sons' Loose Nailer infringed all 4 claims of patent
614,460 Nov. 22, 1898 L. H. Goddu
The Goddu Sons' Slugging Machine infringed all 4 claims of patent
614,460 Nov. 22, 1898 L. H. Goddu
The machine which had been constructed for making the screw threaded wire to be used on the Goddu Sons' Screw Machine infringed all of the 11 claims of patent
655,223 Aug. 7, 1900 G. Goddu

PETER A. COUPAL & WILLIAM GORDON

The "Basting Machine" for pulling lasting tacks, trimming the upper and securing the upper temporarily for the welting operation by means of a basting stitch, of which Coupal and Gordon had built several experimental machines and in which the Goodyear Company had been interested to the extent of trying out some of the machines experimentally, prior to the formation of the United Company, infringed 3 claims (1, 2, 5) of patent
520,775 June 5, 1894 Fowler & Warren

EDWIN T. FREEMAN INFRINGEMENT OF UNITED COMPANY'S PATENTS BY FREEMAN MACHINE

The Freeman experimental Slugging Machine, constructed substantially as shown in patent
714,572 Nov. 25, 1902 Freeman
but embodying the broad invention of patent
618,082 Jan. 24, 1899 Freeman
infringed claims 6 and 7 of patent
582,579 May 11, 1897 Cutter
After January 21, 1902, the Freeman machine would have infringed 5 claims (1, 5, 17, 42 and 43) of patent
691,354 Jan. 21, 1902 Casgrain
To avoid these infringements it would have been necessary to reconstruct entirely the Freeman machine and omit from it valuable inventions on account of which the United Company purchased the Freeman patents.
Freeman had not organized his experimental machine with mechan-

ism for giving the work support a final depression when the machine stopped to facilitate removal of the work, although such mechanism is shown in his patents, because such mechanism is broadly covered in the United Company's patents

582,579 May 11, 1897 Cutter

582,580 May 11, 1897 Cutter

Freeman's machine could not have been a commercial success without such mechanism.

INFRINGEMENT OF FREEMAN PATENTS BY UNITED COMPANY

At the time of the acquisition of the Freeman patents the United Company was developing an improved standard screw machine which later became Screw Machine — Model B: Rapid Standard. This experimental machine infringed claims 1 and 2 of Freeman patent

618,082 Jan. 24, 1899 Freeman

PATENT OFFICE INTERFERENCE

There was an interference in the Patent Office between an application owned by the United Company and an application for reissue of Freeman patent No. 618,082, Jan. 24, 1899, as follows:

Casgrain	Se. No. 670,337 (Patent No. 691,354, Jan. 21, 1902)	Interference No. 21528
v.		
Freeman	Se. No. 12, 948 (Patent Re. 11,962, Jan. 21, 1902)	

Priority on the 19 issues of this interference was awarded to Casgrain and those 19 claims are now in United Company's patent No. 691,354, Jan. 21, 1902, Casgrain.

ALBERT G. BREWER

The Brewer experimental machine infringed 14 claims (1–5, 7, 8, 9, 11–16) of United Company's patent

636,990 Nov. 14, 1899 Heys

This Heys patent was the pioneer patent on the Power Heel Breasting Machine and in my opinion Brewer could not have built a power heel breasting machine without infringing that patent.

On the other hand the United Company's experimental machine never became a commercial success until the invention of the Brewer

patent was incorporated in it. 698 Power Heel Breasting Machines, embodying the Brewer inventions, were made and put out by the United Company.

GLOBE SHOE TOOL COMPANY

This company was infringing the one claim of patent

452,540 May 19, 1891 Bresnahan

and the first claim of patent

528,467 Oct. 30, 1894 Emery

SEAVER PROCESS LASTING COMPANY.

The Seaver lasting machine infringed claim 8 of the United Company's patent

548,671 October 29, 1895 Stirckler

and claim 7 of patent

601,934 April 5, 1898 Brock.

Suits had been brought on these patents as follows

Equity No. 1168 Consolidated & McKay Lasting Machine Company

v.

Seaver Process Lasting Company;

Equity No. 1167 Consolidated & McKay Lasting Machine Company

v.

Seaver Process Lasting Company.

When, after these suits were brought, the infringing construction was removed from the machines the Seaver business fell to pieces.

The most important reason, however, for the acquisition of the Seaver patents by the United Company was that the Seaver Company's experimental pulling-over machine, which was being tried out in a Brockton shoe factory, was provided with means for adjusting the upper on the last while the upper was under strain. The experimental pulling-over machine which the United Company was then developing also embodied such means, which is probably indispensable for a successful pulling-over machine. If it had proved that the Seaver Company's inventors had been the first to provide such means for a pulling-over machine and the Seaver Company had obtained a patent for this important and indispensable invention, the United

Company, after its expenditure of hundreds of thousands of dollars in developing this pulling-over machine would not have been able to put that machine into commercial use without infringing the Seaver Company's patent; and the United Company had no means of ascertaining whether its inventor or the Seaver Company's inventor had been the first to produce such mechanism.

After the acquisition of the Seaver Company's patents a thorough and extended investigation satisfied the United Company that its inventor, McFeely, was the first inventor and many broad claims to this invention are embodied in United Company's patent No.

663,777 December 11, 1900 McFeely.

This invention has been embodied in every pulling-over machine which has been put out by the United Company.

Boston Fast Color Eyelet Company

While there were no infringements between the United Company and the Boston Fast Color Eyelet Company, it should be noted that the United Company could not extend its field to include the manufacturing and marketing of fast color eyelets without acquiring the broad patents owned by the Boston Fast Color Eyelet Company which dominated that field.

Enamel Eyelet Company

While this Company was controlled by the same people who controlled the Boston Fast Color Eyelet Company and the acquisition of the stock of the Enamel Company was a part of the same transaction by which the stock of the Boston Fast Color Eyelet Company was acquired, it should be noted that had it not acquired control of the Enamel Company the United Company could not have entered the enamel eyelet field without subjecting itself to liability of suit under the Enamel Company's design patent

24,867 Nov. 12, 1895 Kempshall

The Enamel Company had brought and vigorously prosecuted suit on that patent against John C. Rhodes as follows:

Equity No. 1013 Enamel Eyelet Co. v. John C. Rhodes

BAY STATE INTERNATIONAL SHOE MACHINERY COMPANY

This company's outsole stitcher infringed the United Company's British patents as follows:

No. 10,102/87 July 19, 1887 Reed (claims 1, 2, 3, 10 & 16)
13,365/88 Sept. 17, 1888 French & Meyer (claim 2)

The United Company owned other foreign patents corresponding to British patent No. 10,102/87 as follows:

French	No. 184,880	July 19, 1887
German	44,439	July 19, 1887
Belgian	78,260	July 19, 1887

The United Company owned other foreign patents corresponding to British patent No. 13,365/88 as follows:

French	No. 193,080	Sept. 20, 1888
German	54,678	Sept. 20, 1888
Belgian	83,338	Sept. 20, 1888
Canadian	33,081	Dec. 7, 1889

SWAIN FULLER MANUFACTURING COMPANY

The United Company had produced and desired to use the sole pressing form for sole laying machines shown and described ln patent
694,367 Mar. 4, 1902 Gifford
but this pad infringed claims 12 and 14 of patent
376,406 Jan. 10, 1888 Coy
which was owned by the Swain Fuller Manufacturing Company.

It should be noted that another important reason for this acquisit on was the desire of the United Company to obtain a leveling machine adapted for leveling turn shoes. The United Company did not then have any leveling machine adapted for turn work. The Star Leveling Machine of the Swain Fuller Manufacturing Company was adapted for leveling turn shoes and after this acquisition was the United Company's standard machine for turn shoe leveling until it was superseded in 1907 by the United Company's greatly improved machine known as Leveling Machine: Goodyear Welt & Turn.

GLOBE SEWING MACHINE COMPANY

The welting machine which was being put out by the Globe Company at the time of the acquisition infringed United Company's patent

461,793 Oct. 20, 1891 Briggs

There was a pending suit against the Globe Company on this patent as follows:

Equity No. 1284 Goodyear Shoe Machinery Company
v.
Globe Sewing Machine Company

A motion for preliminary injunction in this suit had been argued but had not been decided at the time of the purchase of the stock of the Globe Company by the United Company.

There were also pending five suits against users of this machine as follows:

Equity No. 1246	Goodyear	Shoe	Machinery	Company	v. Bartlett
Equity No. 1247	"	"	"	"	v. Morrison
Equity No. 1248	"	"	"	"	v. Smith
Equity No. 1249	"	"	"	"	v. Belonga
Equity No. 1250	"	"	"	"	v. Fox

After March 19, 1901, this machine would also have infringed all three claims of the United Company's patent

670,195 Mar. 19, 1901 Chadbourn (application filed Nov. 11, 1898)

The Globe Company's outsole stitcher infringed claims 3, 6, of the United Company's patent

366,935 July 19, 1887 Dancel

The Globe Company had built one experimental "rounder" which had never been put out. That machine infringed United Company's patents

546,852 Sept. 24, 1895 French & Meyer (claim 8)
630,339 Aug. 8, 1899 " " " (claims 1 and 4)

The Globe Company had also constructed one experimental rounding and channeling machine which infringed the 8th claim of United Company patent

546,852 Sept. 24, 1895 French & Meyer.

Boot and Shoe Sole Laying Company

The United Company produced and desired to use the pressing form for sole laying machines shown and described in its patent

694,367 Mar. 4, 1902 Gifford (application filed Apr. 20, 1900)

but this pressing form infringed claims 1 and 2 of patent

304,416 Sept. 2, 1884 Eppler

which was owned by the Boot and Shoe Sole Laying Company.

Another important reason for the acquisition of the patents of the Boot and Shoe Sole Laying Company was the fact that the United Company did not have a satisfactory sole laying machine. The only machine which it had was the "Rotary Sole Layer" which it had acquired from the Goodyear Company and which was very unsatisfactory because it was continually breaking down, particularly on men's shoes. After the acquisition of a majority of the stock of the Boot and Shoe Sole Laying Company in June, 1899, the United Company discarded the Rotary Sole Layer and adopted as its standard commercial machine the sole layer of the Boot and Shoe Laying Machine Company, using on that machine the pressing form of Gifford patent No. 694,367. This machine, combining the best features of the rotary machine and the machine of the Boot and Shoe Sole Laying Company, has been much improved by a number of inventions made from time to time, and in the various stages of its development it has ever since been and is to-day the standard sole laying machine of the United Company.

J. C. Rhodes & Company

As previously explained, when the United Company entered the fast color eyelet field by its acquisition of the business of the Boston Fast Color Eyelet Company it acquired from the same parties and as a part of the same transaction the stock of the Enamel Eyelet Company. It has also been explained that the Enamel Eyelet Company had brought and was vigorously prosecuting a suit against John C. Rhodes for infringement of design patent

24,867 Nov. 12, 1895 Kempshall viz.

Equity No. 1013 Enamel Eyelet Company v. John C. Rhodes

J. C. Rhodes & Company owned a patent containing broad claims to an enamel eyelet so constructed as to prevent breaking of the enamel coating by the pressure exerted in the eyelet setting operation. This patent was

565,091 Aug. 4, 1896 Rhodes

A suit had been brought by J. C. Rhodes & Company against users of eyelets supplied by the Enamel Company for infringement of that patent

565,091 Aug. 4, 1896 Rhodes.

This suit was

Equity No. 1285 John C. Rhodes and John B. Rhodes (doing business as J. C. Rhodes & Company)

v.

Marcus Beebe, Decius Beebe, Junius Beebe, Lucius Beebe & Sons.

Besides clearing up this complicated situation the United Company accomplished two important objects by the acquisition of the Rhodes business:

1. It was able to produce a commercially satisfactory enamel eyelet. As explained in previous testimony, the eyelet made by the Enamel Eyelet Company was not satisfactory and the United Company was not able to get rid of the stock which it secured from the Enamel Company and finally had to junk most of those eyelets.

2. The United Company was able for the first time to produce satisfactory metal blanks for its fast color eyelets. Prior to that time those blanks, which had been procured from different sources had not been satisfactory.

Morley Button Manufacturing Co.

The eyelets manufactured by the Morley Button Manufacturing Co. infringed patents owned by J. C. Rhodes & Co. Incorporated and on October 29, 1901, a suit was brought for infringement of claim 2 of patent

565,091, August 4, 1896 Rhodes

Equity No. 1543 J. C. Rhodes & Co. Incorporated v. Morley Button Manufacturing Co.

On October 30, 1901, a suit was begun for infringement of design patent

24,876, Nov. 12, 1895 Kempshall

Equity No. 1544 J. C. Rhodes & Co. Incorporated v. Morley Button Manufacturing Co.

Among the considerations stated in the agreement between the United Company and the Morley Company (Pltff's. Ex. 92) were a covenant by the United Company to cause the bills of complaint in the two suits against the Morley Company to be dismissed without costs or damages, and a further covenant that the Morley Company should be licensed under patents 565,091, and Design 24,867 to manufacture eyelets in process to fill the orders which the Morley Company had on hand.

American Sole Laying Machine Company

This company was supplying a double or "two-form" sole laying machine which was twice as fast as a single machine because while a sole was being laid by one form the operator could be removing a shoe from and presenting another shoe to the other form. The standard commercial machine of the United Company at that time was the machine which it had acquired from the Boot and Shoe Sole Laying Company with improvements which the United Company had made, but that was a one-form or single machine. The United Company desired to develop that machine into a double machine but such a machine would infringe the much litigated patent

384,893 June 19, 1888 Cutcheon

which had been sustained by the Court of Appeals in the First Circuit. The American Sole Laying Machine Company had a license under that Cutcheon patent and the acquisition of that license, with the right to build a two-form machine without infringement of the Cutcheon patent, was the object of this transaction. The United Company immediately proceeded to develop a double or two-form machine and the new machine, known as Laying Machine (Twin): Goodyear Improved Sole, was first put out in July, 1903, broadly speaking a combination of the two machines. This twin machine, incorporating important later improvements, is now known as Laying

Machine — Model C: Goodyear Improved Sole, and is the present standard machine.

G. W. EMERSON & COMPANY

The Emerson Heel Finishing Machine infringed 3 claims (3, 10 & 11) of patent

699,476 May 6, 1902 Beckwith & Pease

which was owned by the United-Xpedite Finishing Company. At the time of this acquisition there was still pending the application for patent

743,988 Nov. 10, 1903 Pease

which shows and describes the commercial Xpedite Heel Finishing Machine and is one of the most important patents on that machine. The Emerson machine infringed 8 claims (1, 2, 7, 8, 17, 20, 21 & 22) of that patent. The members of the Emerson concern were advised of these infringements and suits would have been brought if the Emerson business had not been acquired.

BOOTH BROTHERS

BOOTH BROTHERS COMPANY

At the time of this acquisition Booth Brothers had a machine for forming impression stitches on the upper face of the welt of a welt shoe. This machine, known as the Booth Geared Wheeler, had recently superseded a machine known as Booth Impression Stitch Wheeling Machine. Both of these machines infringed claim 4 of the United Company's patent

690,422 Jan. 7, 1902 Hadaway

The Booth Geared Wheeler also infringed several allowed claims of an application owned by the United Company. These infringed claims are numbered 1, 2 and 3 in the United Company's patent, which was granted on that application,

906,705 Dec. 15, 1908 Hadaway

For burnishing the impression stitches made by the machines above mentioned Booth Brothers were putting out a machine known as Booth Impression Stitch Burnishing Machine. That machine infringed several claims of an application owned by the United Com-

pany, which claims are numbered 1, 2 and 3 in the patent which was granted on that application,

906,705 Dec. 15, 1908 Hadaway

BROCKTON SUPPLY COMPANY

When these patents were acquired the United Company was developing a tack pulling machine which infringed two claims (1 and 2) of patent

777,795 Dec. 20, 1904 Lyon

which was owned by the Brockton Supply Company.

On the other hand the "Rapid Tack Puller" which was being put out by the Brockton Supply Company infringed claims of an application filed November 6, 1899, owned by the United Company, on which was granted patent

864,532 Aug. 27, 1907 Hadaway

The claims infringed are numbered 24 and 25 in that patent.

The Brockton Supply Company's machine also infringed claims of a pending application filed September 9, 1905, owned by the United Company, on which was subsequently granted patent

1,011,773 Dec. 12, 1911 Hadaway.

Claims infringed are numbered 1, 2, 17, 18, and 20 in that patent.

SMITH LACING MACHINE COMPANY

The Smith Lacing Machine infringed many allowed claims in a pending application filed August 29, 1902, controlled by the United Company, on which was granted patent

855,969 June 4, 1907 Paine & Winkley

11 claims of that patent are infringed (34, 35, 36 and 38 to 45, inc.).

The machine of this Paine & Winkley patent, however, was only experimental and was never used commercially. It was provided with only one needle so that it could lace only one pair of eyelets. A commercially successful lacing machine must be adapted to lace a plurality of pairs of eyelets and a machine so organized was broadly covered by the claims of a patent owned by the Smith Company, which also owned other patents containing broad claims to many features of the machine which were found indispensable for a com-

mercially successful machine, as is fully explained in that portion of my testimony before the Examiner in regard to Lacing Machine — Model A: Ensign, beginning on page 2599 of the record. This situation resulted in a deadlock since neither the United Company nor the Smith Lacing Machine Company was able to put out a commercial lacing machine without infringing a patent or patents owned by the other.

ZOTIQUE BEAUDRY

Beaudry's experimental Heel Burnishing Machine, which had not been even tried out in any shoe factory, infringed 9 claims (2, 9, 10, 11, 12, 13, 14, 15, 16) of a patent owned by the United Xpedite Finishing Company

805,763 Nov. 28, 1905 Tuttle (appln. filed May 20, 1902)

The United Shoe Machinery Company owned the majority of the capital stock of the United Xpedite Finishing Company.

RICHARDSON SHOE MACHINERY COMPANY

The United Company's McKay Sewing Machine — Model B infringed claim 16 of the Richardson Shoe Machinery Company's patent

710,613 Oct. 7, 1902 Richardson

The United Company's present commercial Outsole Stitching Machine, known officially as Lockstitch Machine — Model M: Goodyear Outsole Rapid, which was adopted January 6, 1912, embodies the mechanism defined in claim 16 of the Richardson Company's patent

710,613 Oct. 7, 1902 Richardson

and embodies mechanism defined in 3 claims (29, 33, 35) of the Richardson Company's patent

710,612 Oct. 7, 1902 Richardson

The mechanisms of the Model M Outsole Stitcher, which embody the inventions defined in the claims of these two Richardson patents, constitute important and valuable improvements, as is fully explained in my deposition before the Examiner regarding this machine. Had the Richardson Company's patents not been acquired by the United Company, these important improvements could not have been incorporated in the Model M Outsole Stitcher without infringement.

It should further be noted that immediately after the acquisition of the Richardson Company's patents the United Company undertook the development of a new McKay Sewing Machine which should embody the best features of both the United Company's Model B machine and the Richardson machine. After several years continuous experimental work such a machine was produced and was first put out for shoe factory trial in September, 1912. During the period since that date it has been tried out in several different shoe factories and has been gradually perfected until it is now nearly ready for adoption and manufacture in large numbers for commercial use. While, as originally intended, the machine embodies the best features of both the Model B machine and the Richardson machine, in its organization and in its appearance it more nearly resembles the Richardson machine than it does the Model B. In this new machine many valuable improvements have been made by the United Company's inventors which could not have been embodied in a commercial machine and made available to shoe manufacturers had there not been common ownership of the United Company's patents and the Richardson Company's patents.

The experimental Clicking Machine in which the Richardson Shoe Machinery Company and the Essex Machine Company were jointly interested infringed at least 37 claims (1–6, 9, 10, 12, 13, 14, 18, 20, 21, 22, 24–32, 35–43, 46, 56, 57, 58) of patent

921,503 May 11, 1909 Bates

This machine also infringed 3 claims of a pending application owned by the United Company, which claims are numbered 30, 32, and 33 in United Company's patent

1,070,729 Aug. 19, 1913 Prime & Ashton

The machine also infringed 10 claims of a pending application owned by the United Company which are the 10 claims of patent

1,075,064 Oct. 7, 1913 Prime

There has been an interference in the Patent Office between the application for Prime patent No. 1,075,064 and a Reed application on the experimental clicking machine in which the Richardson Com-

pany and the Essex Machine Company were jointly interested. This interference which was declared on March 1, 1910, was as follows:

Prime	Se. No. 393,195 (Patent No. 1,075,064, Oct. 7, 1913)	Interference No. 31,544
v.		
Reed	Se. No. 435,260	

In this interference priority was awarded to Prime on 9 counts of the interference and priority was awarded to Reed on 2 counts of the interference.

Another interference was declared March 1, 1910, between the Gordon application owned by the United Company and the Reed application, as follows:

Gordon	Se. No. 454,738 (Patent 1,082,628, Dec. 30, 1913	Interference No. 31,545
v.		
Reed	Se. No. 435,260	

In this interference priority on all the counts was awarded to Reed.

Ellis Lacer Company

The Victoria Self Lacing Company, which had been controlled by the Consolidated & McKay Lasting Machine Company and which has been controlled by the United Shoe Machinery Company since its organization, had, prior to 1899, attempted to put upon the market a lacing device for temporarily securing together the eyeletted edges of uppers during the lasting operation. This device had not been successful and attempts to market it had been discontinued before 1899 so that after 1899 and up to the time of the Ellis Company acquisition neither the Victoria Company nor the United Shoe Machinery Company had been putting out any form of wire lacer. The Victoria Company's inventors, however, had made considerable progress in experimenting along the lines of the Ellis Lacer. Although these experimental lacers were not developed to the point of commercial success, patent applications had been filed upon them and on those applications patents were eventually granted which were infringed by the Ellis Lacers as follows:

627,441 June 20, 1899 Peck

930,426 Aug. 10, 1909 Smith

930,485 Aug. 10, 1909 Leonard

The Ellis Lacers infringed 7 claims (2–8) of the Victoria Company's patent

627,441 June 20, 1899 Peck.

In addition to these 7 claims the Adjustable Ellis Lacer also infringed claim 1 of that patent

627,441 June 20, 1899 Peck.

The Ellis Lacers also infringed 8 claims (1, 3, 8, 9, 11, 12, 14, and 15) of Victoria Company's patent

930,426 Aug. 10, 1909 Smith (application filed April 3, 1899)

The Ellis Lacer which was designed especially for Blucher shoes also infringed 7 claims (4, 5, 6, 7, 11, 13, and 14) of the Victoria Company's patent

930,485 Aug. 10, 1909 Leonard (application filed Mar. 20, 1899).

The claims of the Smith and Leonard patents were broad and after these patents were granted they were submitted to counsel with a view to bringing suit upon them as well as upon the Peck patent against the Ellis Lacer Company. The Ellis Company was promptly notified of the infringement of these patents and opened negotiations with officials of the United Shoe Machinery Company which resulted in the acquisition of the Ellis Company's stock by the United Company.

While the patents of the Victoria Self Lacing Company completely dominated the Ellis Lacers, the Victoria Company's devices were not satisfactory commercial lacers and the essential features of a satisfactory commercial lacer were the subject-matter of broad claims in patents owned by the Ellis Lacer Company. As a result each company's patents if held valid and sustained would have prevented the other company from putting out lacers for commercial use.

The Wentworth Company

The Wentworth Heel Seat Beating Machine of The Wentworth Company infringed 23 claims (1–6, 8–11, 13–17, 21, 23–29) of a patent owned by the United-Xpedite Finishing Company (a majority of

the stock of which was owned by the United Shoe Machinery Company) —

616,432 Dec. 20, 1898 Beaudry.

A suit for infringement of this patent was brought in April, 1908, in this District against a user of the Wentworth machine as follows:

Equity No. 470 United-Xpedite Finishing Company

v.

Reinhard E. Bartels et al.

This suit was prosecuted to final hearing and on December 1, 1909, the claims were held to be valid and infringed. This machine further infringed 13 claims (1, 2, 3, 4, 6, 12, 16, 19, 20, 21, 22, 23, and 25) of United Shoe Machinery Company's patent

768,560 Aug. 23, 1904 Casgrain

and in March, 1909, a suit for infringement of this patent was brought in the Southern District of Ohio as follows:

Equity No. 515 United Shoe Machinery Company

v.

The Wentworth Company

This suit was uncontested and final decree was entered for complainant.

The patents upon which these two suits were brought covered indispensable features of the Wentworth machine and The Wentworth Company could no longer put out their Heel Seat Beating Machine.

The Wentworth Shank Sticker, for attaching shank stiffeners to shoes by hot pitch instead of cementing or tacking them, infringed 3 claims (34, 35, and 36) of the United Company's patent

940,419 Nov. 16, 1909 Ashton.

ADAM H. PRENZEL

The machine for beveling the upper face of the margin of the heel seat piece, which Prenzel was using in the manufacture of his improved turn shoe, infringed two allowed claims of an application owned by the United Company filed November 22, 1906, those claims being 2 and 6 of the United Company's patent granted on that application

1,003,981 Sept. 26, 1911 Busell.

It should further be noted that the work support which Prenzel had constructed for use in channeling the sole of his improved turn shoe

had been applied by him and was being used by him on the United Company's Channeling Machine: Goodyear Universal (Turn work) which was the subject-matter of several patents owned by the United Company.

M. V. BRESNAHAN & Co.

The Bresnahan Heel Burnishing Machine as it was first put out infringed several patents owned by the United-Xpedite Finishing Company (of which the United Shoe Machinery Company owns a controlling stock interest). It infringed 8 claims (1, 20–26) of the United-Xpedite Company's patent

743,988 Nov. 10, 1903 Pease.

This machine also infringed 7 claims (8, 9, 10, 13, 15, 17, and 18) of United-Xpedite Company's patent

743,993 Nov. 10, 1903 Thomson.

It also infringed 2 claims (3 and 7) of United-Xpedite Company's patent

743,994 Nov. 10, 1903 Thomson.

About 10 of these machines had been put into use in shoe factories when users of the machine were notified of the infringement by the United-Xpedite Company. Thereupon the Bresnahan firm discontinued manufacture of these machines and developed another heel burnishing machine of entirely different type. This new machine also infringed 2 patents of the United-Xpedite Company. It infringed 6 claims (3, 9, 10, 16, 20 and 21) of patent

699,476 May 6, 1902 Beckwith & Pease.

It also infringed claim 7 of patent

743,988 Nov. 10, 1903 Pease.

Only a few of the later type of machines had been put out by the Bresnahan firm before negotiations were opened which led to the acquisition of the Bresnahan firm by the United Company.

In addition to the infringements above noted there was a large amount of litigation pending in the state courts between the United Company and the Bresnahan Shoe Machinery Company. When Bresnahan sold his interest in the Bresnahan Shoe Machinery Company to Thomas G. Plant in January, 1906, the Bresnahan Company transferred to Bresnahan and Heys, who together owned all

the stock of the Bresnahan Company, all interests under this litigation in the state courts between the United Company and the Bresnahan Company. These suits were as follows:

Four actions of replevin had been brought in the Superior Court for Essex County as follows:

Docket No. 3582 United Shoe Machinery Company v. Bresnahan Shoe Machinery Company. Writ dated Jan. 2, 1904.

Docket No. 3583 United Shoe Machinery Company v. Bresnahan Shoe Machinery Company. Writ dated Dec. 30, 1903.

Docket No. 3584 United Shoe Machinery Company v. Bresnahan Shoe Machinery Company. Writ dated Jan. 1, 1904.

Docket No. 3585 United Shoe Machinery Company v. Bresnahan Shoe Machinery Company. Writ dated Jan. 1, 1904.

There were verdicts for the defendant in each of these actions. These cases went to the Massachusetts Supreme Court on exceptions and the exceptions were overruled, the decision of the court being reported in 197 Mass., 206.

At the date of the acquisition of the Bresnahan business by the United Company there were also pending four suits which had been brought in the Superior Court for Suffolk County as folllows:

Docket No. 44259 Bresnahan Shoe Machinery Company v. United Shoe Machinery Company. Suit begun Nov. 4, 1907.

Docket No. 44260 Maurice V. Bresnahan v. United Shoe Machinery Company. Suit begun Nov. 4, 1907.

Docket No. 44079 Maurice V. Bresnahan v. United Shoe Machinery Company. Suit begun May 4, 1908.

Docket No. 47080 Maurice V. Bresnahan v. United Shoe Machinery Company. Suit begun May 4, 1908.

C. P. STANBON & COMPANY

INFRINGEMENTS

The later type of Stanbon Channel Opening Machine (Stanbon patent No. 898,016, Sept. 8, 1908) infringed 6 claims (1, 2, 3, 5, 6, 10) of United Company's patent

809,332 Jan. 9, 1906 Smith

This machine also infringed 2 claims (3 & 4) of United Company's patent

818,774 Apr. 24, 1906 Mitchell

Stanbon's Channel Cementing Machine infringed claim 8 of United Company's patent

1,030,623 June 25, 1912 Warren (appln. filed July 29, 1905)

Stanbon had an experimental Channel Cementing Machine (Stanbon patent No. 1,004,098, Sept. 26, 1911) which he did not put into commercial use because it infringed 2 claims (1 & 2) of United Company's patent

743,929 Nov. 10, 1903 Rollins

In April, 1908, United Company was notified by counsel for Stanbon that its Apex Channeling Machine infringed Stanbon's patents

500,438 June 27, 1893

607,140 July 12, 1898

No suits, however, had been brought on these patents up to the time of the acquisition of the Stanbon business by the United Company.

PATENT OFFICE INTERFERENCES

CHANNEL CEMENTING MACHINE

In 1904 the United Company and Stanbon each put upon the market a new and greatly improved type of channel cementing machine. The distinguishing characteristic of each machine was a device which may be conveniently designated the "Lip Lifting Finger." Three patent applications filed by Furber, Howe and Warren and owned by the United Company were put into interference in the Patent Office with a Stanbon application. In all, 6 interferences involving these applications were declared, these interferences being numbered

25,427

25,428

25,429

25,431
25,433
26,519

All these interferences were either consolidated with or made by stipulation to depend upon the outcome of the first one above listed, No. 25,427. After decisions both ways by the lower tribunals of the Patent Office, the Court of Appeals of the District of Columbia finally decided the interferences in favor of Stanbon on February 23, 1910, so that it was impossible for the United Company to use this improvement until it acquired the Stanbon patents. It should be noted, however, that the Stanbon application which was involved in interferences disclosed an oscillating type of brush which was not a successful commercial construction, and the Stanbon commercial machine employed a rotary brush. United Company's Warren application which was involved in these interferences and on which was granted patent

1,030,623 June 25, 1912

disclosed and claimed a combination including a rotary brush and the Stanbon commercial machine, as has already been noted, infringed claim 8 of that patent. Accordingly, if both the United Company and the Stanbon patents had been sustained in litigation, there would have been a deadlock which would have prevented commercial use of this improved machine.

FOLDING MACHINE

Prior to the Stanbon acquisition, both the United Company and Stanbon had been developing an improved folding machine of a radically new character. Both machines incorporated substantially the same improvements and two interferences involving United Company's Smith application and one of the Stanbon applications were declared. The question of priority was a very close one and the issues were so broad that the party that won the interference could undoubtedly prevent the other party from putting out any machine of this character.

The United Company had no folding machine of any description and since the Stanbon acquisition has put out in large numbers folding machines embodying the Stanbon inventions.

CHANNEL OPENING MACHINE

The applications for the United Company's Smith patent

809,332 Jan. 9, 1906 Smith

and United Company's Mitchell patent

818,774 Apr. 24, 1906 Mitchell

which, as already explained, were infringed by the later type of Stanbon's Channel Opening Machine, were in interference in the Patent Office with the application for Stanbon's patent on that machine

898,016 Sept. 8, 1908 Stanbon

These interferences were as follows:

No. 24,132 Smith v. Stanbon, declared Dec. 13, 1904.

No. 25,147 Mitchell v. Stanbon, declared Aug. 26, 1905.

Both of these interferences were decided adversely to Stanbon.

The following modifications are hereby made in Goodyear Department Lease and License Agreement, No , dated , between the United Shoe Machinery Company, lessor, and , of , lessee, covering one (1) Goodyear Outsole Rapid Lockstitch Machine, No , and one (1) Goodyear Bobbin Winding Machine (Rapid), No , viz;

1. The lessee may use said Goodyear Outsole Rapid Lockstitch Machine, No. , in repair work for sewing on new outsoles to boots, shoes or other footwear not manufactured by the lessee, and for each pair of boots, shoes or other footwear upon which said machine shall be used shall pay to the lessor for such use of said machine in accordance with the following schedule:

Schedule of Payments for Use of Goodyear Outsole Rapid Lockstitch Machine, No. for Repair Work.

Children's, misses', youths' and women's footwear four cents per pair
Boys' and men's footwear . . . . six cents per pair

in lieu of the amounts specified in the "Schedule of Rents and Royalties for Goodyear Welts and Turns" in Article Five of said lease and license agreement contained. The payments in accordance with the Schedule above set forth shall be made at the same time and in the same manner and shall be subject to discount under the same circumstances as is provided in said Article Five.

II. The monthly guarantee of ten dollars per month provided in said lease and license agreement shall be due and payable on the fifteenth day of each calendar month for the preceding month unless the rental or royalty for the use of said machine during such preceding month (less all abatements) as shown by the lessee's return to the

lessor for said preceding month shall equal or exceed said guaranteed amount.

III. The provisions of Article Six of said lease and license agreement with reference to accounts to be kept by the lessee and return to be made to the lessor are hereby extended to cover the use of the said machinery made by the lessee in accordance with this instrument.

IV. Excepting to the extent herein provided none of the conditions, agreements, stipulations or provisions of said lease and license agreement are hereby in any manner waived or modified.

The following modifications are hereby made in Lasting Machine Department Lease and License Agreement No. , dated , between the United Shoe Machinery Company, lessor, and of , lessee, covering

Consolidated Hand Method Lasting Machine, No.

viz.:

1. Article Four of said Lease and License Agreement is hereby changed to read as follows:

Four. The leased machinery shall be used only in the manufacture of boots, shoes and other footwear made by the lessee known in the trade as "Goodyear Welts" which are welted wholly by "Goodyear Welt and Turn Shoe Machines" or "Goodyear Universal Inseam Sewing Machines" held by the lessee under lease from the lessor and the soles of which are attached to their welts wholly by "Goodyear Outsole Rapid Lockstitch Machines" held by the lessee under lease from the lessor, and shall be used for no other purpose than for lasting the sides of such boots, shoes and other footwear which have been pulled over by "Rex Pulling Over Machines" held by the lessee under lease from the lessor, and which shall be otherwise lasted by "U. S. M. Co. Lasting Machines, No. 5," held by the lessee under lease from the lessor.

2. The lessor hereby waives payment by the lessee of any rental or royalty on account of the use by the lessee of the leased machinery

as specified in said Article Four of said Lease and License Agreement as hereby changed.

Except as herein expressly provided none of the conditions, agreements, stipulations or provisions in said Lease and License Agreement contained is hereby in any manner waived or modified.

Dated this day of 19 .

[Put in Evidence, page 4243.]

[Form J. M. 55–806]

This instrument witnesseth that the following changes are hereby made in the conditions of Lasting Machine Department Lease and License, No. , dated , between the United Shoe Machinery Company, lessor, and , of lessee, and covering

Consolidated Hand Method Lasting Machine, No.

viz.—

Articles Four and Five are hereby changed to read as follows:

Four. The leased machinery shall be used for no other purpose than for lasting the heel portions of turned shoes or other footwear the soles of which shall be attached to their uppers by Turn Sewing Machines held by the lessee under lease from the lessor, and for that purpose the leased machinery shall be used to its full capacity, limited only by the number of such shoes or other footwear made by or for the lessee.

Five. The lessee shall pay to the lessor on the last day of each calendar month as rent or royalty the sum of one-half of one cent for each pair of shoes or other footwear in the manufacture or preparation of which the leased machinery shall be used during the next preceding

calendar month, provided, however, that in the computation of such rental or royalty upon children's shoes seventy-two (72) pairs of such shoes shall be considered as the equivalent of sixty (60) pairs of all other kinds, and further provided, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the rent or royalty due for the use of the leased machinery for the next preceding calendar month, the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from such rent or royalty due for such preceding calendar month. The lessee guarantees that the rent or royalty herein provided (less all abatements) shall amount in each calendar year, ending December thirty-first, to at least ten dollars ($10.00) for each calendar month and at the end of each such calendar year the lessee shall pay to the lessor the amount, if any, by which the rent or royalty paid for said year is less than such guaranteed rent or royalty; provided, however, that if in any calendar year the factory of the lessee remains wholly idle for any entire calendar month, then the amount of rent or royalty guaranteed for that year shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle, but such reduction shall not be made in respect to more than ten (10) out of twelve (12) consecutive calendar months.

Excepting as herein expressly provided, none of the conditions, agreements, stipulations or provisions of said lease and license are in any manner waived or modified, but the same are and shall remain in full force and effect.

[Put in Evidence, page 4245.]

Dear Sirs:—

Referring to that clause contained in Article Three of our Metallic Department Lease and License No. to you, dated , and covering Machines, Nos. , which provides that the said machinery shall not be used on any welted boots or shoes which are not welted and stitched on welt sewing and sole stitching machines leased from the lessor, or turn shoes the soles of which are not attached by turn sewing machines leased from the lessor, we beg to state in accordance with your request that said clause in said lease shall not be held to prevent the use of said designated machines by you upon "hand sewed welts" made by or for you by reason of the fact that the same are not welted on welt sewing machines held under lease

from us, or upon "hand turns" made by or for you by reason of the fact that the soles of the same are not attached by turn sewing machines held by you under lease from us.

Very truly yours,

UNITED SHOE MACHINERY COMPANY

[Put in Evidence, page 4246.]

The conditions and provisions contained in Heeling Department Lease and License, No. , dated , granted by the United Shoe Machinery Company as lessor, to , as lessee, and covering , are hereby modified to the extent hereinafter stated but not otherwise.

1. Article numbered in said Lease and License is hereby stricken out, and in lieu thereof it is provided and agreed as follows, with the same force and effect as if the following article were printed in said Lease and License as one of the conditions thereof:—

. The lessee shall use the leased machinery for no other purpose than for compressing heels for boots, shoes and other footwear. The leased machinery shall not nor shall any part thereof be used for compressing or in anywise operating upon toplifts, soles or taps.

2. Articles numbered in said Lease and License are hereby stricken out, and in lieu thereof it is provided and agreed as follows, with the same force and effect as if the following article were printed in said Lease and License as one of the conditions thereof:—

. The lessee shall pay to the lessor as rental or royalty for the term of one year herein provided for the sum of three hundred dollars ($300.00), payable in equal monthly payments of twenty-five dollars ($25.00) each. Said payments of twenty-five dollars ($25.00) each shall be made to the lessor at its office in Boston, Massachusetts, on or before the fifth day of each calendar month.

3. The first sentence in article numbered in said Lease and License, beginning with the words "This lease and license" and ending with the words "date hereof" is hereby stricken out, and

in lieu thereof the following sentence is substituted with the same force and effect as if so printed in said lease and license.

This lease and license shall continue, unless sooner terminated by the lessor by notice, or because of breach thereof on the part of the lessee, or otherwise as herein provided, for one year from the date hereof.

Excepting as herein expressly provided none of the conditions, agreements, stipulations or provisions of said Lease and License are in anywise waived or modified, but the same are and shall remain in full force and effect.

DEFENDANTS' EXHIBIT 310.

[Put in Evidence, page 4248.]

March 23, 1910.

W. H. McElwain Company, 348 Congress Street, Boston, Mass.

Gentlemen:— We hereby consent to the removal by you of the following designated machine:—

Goodyear Welt Splitting Machine, No. 802

held by you under Lease and License Agreement No. 5884A., dated October 28, 1904, from your Cohas factory in Manchester, New Hampshire, to your Eastside factory in said Manchester, upon the understanding and agreement that said machine is to be held and used by you at said Eastside factory under all the agreements, conditions, stipulations and provisions in said Lease and License Agreement contained, with the same force and effect as if said machine had been originally leased to you by said Lease and License Agreement for use in said Eastside factory in place of said Cohas factory.

Yours truly,

UNITED SHOE MACHINERY COMPANY,

By Vice-President.

The following modifications are hereby made in Goodyear Department Lease and License Agreement, No. 5301 "A", dated July 23, 1907, between the United Shoe Machinery Company, lessor, and Robertson & Sons, of New York, N. Y., lessee, covering one (1) Goodyear Outsole Rapid Lockstitch Machine, No. 2633, and one (1) Goodyear Bobbin Winding Machine (Rapid), No. 1393, viz:

I. The lessee may use said Goodyear Outsole Rapid Lockstitch Machine, No. 2633, in repair work for sewing on new outsoles to boots, shoes or other footwear not manufactured by the lessee, and for each pair of boots, shoes or other footwear upon which said machine shall be so used shall pay to the lessor for such use of said machine in accordance with the following schedule:

Schedule of Payments for Use of Goodyear Outsole Rapid Lockstitch Machine, No. 2633 for Repair Work.

Children's, misses', youths' and women's footwear four cents per pair
Boys' and men's footwear . . . . . six cents per pair

in lieu of the amounts specified in the "Schedule of Rents and Royalties for Goodyear Welts and Turns" in Article Five of said lease and license agreement contained. The payments in accordance with the Schedule above set forth shall be made at the same time and in the same manner and shall be subject to discount under the same circumstances as is provided in said Article Five.

II. The monthly guarantee of ten dollars per month provided for in said lease and license agreement shall be due and payable on the fifteenth day of each calendar month for the preceding month unless the rental or royalty for the use of said machine during such preceding month (less all abatements) as shown by the lessee's return to the lessor for said preceding month shall equal or exceed said guaranteed amount.

III. The provisions of Article Six of said lease and license agreement with reference to accounts to be kept by the lessee and return to be made to the lessor are hereby extended to cover the use of the said machinery made by the lessee in accordance with this instrument.

IV. Excepting to the extent herein provided none of the conditions, agreements, stipulations or provisions of said lease and license agreement are hereby in any manner waived or modified.

By James Robertson

The Kyng B. Shoe Company, of Rochester, N. Y., the lessee named in Goodyear Department Lease and License Agreement, No. 7071 "A", dated February sixth, 1911, granted by the United Shoe Machinery Company as lessor, is hereby given permission to use

Goodyear Outsole Rapid Lockstitch Machine, No. 4302 and
Goodyear Rapid Bobbin Winding Machine, No.

for attaching the outsoles of children's shoes (sizes one to ten and one-half inclusive) having an upper, insole and welt, all of sheepskin, fastened together by the aid of a dry thread Sewing or Stitching Machine and for such use only of said Goodyear Outsole Rapid Lockstitch Machine and Goodyear Rapid Bobbin Winding Machine the lessee shall pay to the lessor in respect to each pair of such children's shoes whose outsoles are attached by the aid of said Goodyear Outsole Rapid Lockstitch Machine the sum of two (2) cents in lieu of the amount specified in the "Schedule of Payments per pair" contained in Article Six of said Lease and License Agreement.

Said shoes shall not nor shall the boxes or cartons containing the same be stamped or marked with the word "Goodyear" or advertised, represented or sold as "Goodyear Welts" or "Goodyear Turns."

The requirements of said Lease and License Agreement with reference to time for payments, records and accounts are hereby extended to apply to shoes operated upon in accordance with permission hereby given.

The provisions contained in this instrument shall have the same force and effect as though included in said Lease and License Agreement as conditions thereof.

The permission hereby given does not include the use of any machine or machines other than said Goodyear Outsole Rapid Lockstitch Machine and said Goodyear Rapid Bobbin Winding Machine hereinbefore specifically designated by number and excepting to the extent herein expressly provided none of the conditions, stipulations or provisions in said Lease and License Agreement contained is hereby, in any manner, waived or modified.

(Form J. M. 54–806)

This instrument witnesseth that the following changes are hereby made in the conditions of Lasting Machine Department Lease and License, No. 6164 "A", dated November twentieth, 1909, between the United Shoe Machinery Company, lessor, and Curtis and Jones Company of Reading, Pennsylvania, lessee, and covering

CONSOLIDATED HAND METHOD LASTING MACHINE, No. 5243.

viz.—

Articles Four and Five are hereby changed to read as follows:

Four. The leased machinery shall be used for no other purpose than for wiring the toes of turned shoes or other footwear the soles of which shall be attached to their uppers by Turn Sewing Machines held by the lessee under lease from the lessor, and for that purpose the leased machinery shall be used to its full capacity, limited only by the number of such shoes or other footwear made by or for the lessee.

Five. The lessee shall pay to the lessor on the last day of each calendar month as rent or royalty the sum of one-half of one cent for each pair of shoes or other footwear in the manufacture or preparation of which the leased machinery shall be used during the next preceding

calendar month, provided, however, that in the computation of such rental or royalty upon children's shoes seventy-two (72) pairs of such shoes shall be considered as the equivalent of sixty (60) pairs of all other kinds, and further provided, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the rent or royalty due for the use of the leased machinery for the next preceding calendar month, the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from such rent or royalty due for such preceding calendar month. The lessee guarantees that the rent or royalty herein provided (less all abatements) snall amount in each calendar year, ending December thirty-first, to at least ten dollars ($10.00) for each calendar month and at the end of each such calendar year the lessee shall pay to the lessor the amount, if any, by which the rent or royalty paid for said year is less than such guaranteed rent or royalty; provided, however, that if in any calendar year the factory of the lessee remains wholly idle for any entire calendar month, then the amount of rent or royalty guaranteed for that year shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle, but such reduction shall not be made in respect to more than ten (10) out of twelve (12) consecutive calendar months.

Excepting as herein expressly provided, none of the conditions, agreements, stipulations or provisions of said lease and license are in any manner waived or modified, but the same are and shall remain in full force and effect.

License, No. 1792 "G", dated August twenty-second, 1906, between the United Shoe Machinery Company, lessor, and Moore-Shafer Shoe Manufacturing Company of Brockport, New York, lessee, and covering

CONSOLIDATED HAND METHOD LASTING MACHINE, No. 5416

viz.—

Articles Four and Five are hereby changed to read as follows:

Four. The leased machinery shall be used for no other purpose than for lasting the heel portions of turned shoes or other footwear the soles of which shall be attached to their uppers by Turn Sewing Machines held by the lessee under lease from the lessor, and for that purpose the leased machinery shall be used to its full capacity, limited only by the number of such shoes or other footwear made by or for the lessee.

Five. The lessee shall pay to the lessor on the last day of each calendar month as rent or royalty the sum of one-half of one cent for each pair of shoes or other footwear in the manufacture or preparation of which the leased machinery shall be used during the next preceding calendar month, provided, however, that in the computation of such rental or royalty upon children's shoes seventy-two (72) pairs of such shoes shall be considered as the equivalent of sixty (60) pairs of all other kinds, and further provided, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the rent or royalty due for the use of the leased machinery for the next preceding calendar month, the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from such rent or royalty due for such preceding calendar month. The lessee guarantees that the rent or royalty herein provided (less all abatements) shall amount in each calendar year, ending December thirty-first, to at least ten dollars ($10.00) for each calendar month and at the end of each such calendar year the lessee shall pay to the lessor the amount, if any, by which the rent or royalty paid for said year is less than such guaranteed rent or royalty; provided, however, that if in any calendar year the factory of the lessee remains wholly

idle for any entire calendar month, then the amount of rent or royalty guaranteed for that year shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle, but such reduction shall not be made in respect to more than ten (10) out of twelve (12) consecutive calendar months.

Excepting as herein expressly provided, none of the conditions, agreements, stipulations or provisions of said lease and license are in any manner waived or modified, but the same are and shall remain in full force and effect.

Sept. 25, 1908.

Messrs. A. E. Little & Company, Lynn, Massachusetts.

Dear Sirs:— Referring to that clause contained in Article Three of our Metallic Department Lease and License No. 1271 "A" to you, dated September 25, 1908, and covering Universal Slugging Machines Nos. 3004 and 3005, Knife Grinding Machines Nos. 5576 and 5710,

and Loose Nailing Machines Nos. 125 and 142, which provides that the said machinery shall not be used on any welted boots or shoes which are not welted and stitched on welt sewing and sole stitching machines leased from the lessor, or turn shoes the soles of which are not attached by turn sewing machines leased from the lessor, we beg to state in accordance with your request that said clause in said lease shall not be held to prevent the use of said designated machines by you upon "hand sewed welts" made by or for you by reason of the fact that the same are not welted on welt sewing machines held under lease from us, or upon "hand turns" made by or for you by reason of the fact that the soles of the same are not attached by turn sewing machines held by you under lease from us.

Very truly yours,

[SEAL] UNITED SHOE MACHINERY COMPANY,
By S. W. Winslow, President.

The conditions and provisions contained in Heeling Department Lease and License, No. 1242, dated March first, 1905, granted by the United Shoe Machinery Company as lessor, to the Houghton Heel & Leather Company as lessee, and covering Automatic Heel Compressing Machine (No. 4 Model) No. 209 are hereby modified to the extent hereinafter stated but not otherwise.

1. Article numbered Four in said lease and license is hereby stricken out, and in lieu thereof it is provided and agreed as follows, with the same force and effect as if the following article were printed in said lease and license as one of the conditions thereof:—

Four. The lessee shall use the leased machinery for no other purpose than for compressing heels for boots, shoes and other footwear. The leased machinery shall not nor shall any part thereof be used for compressing or in anywise operating upon toplifts, soles or taps.

2. Articles numbered Five, Six and Seven in said lease and license are hereby stricken out, and in lieu thereof it is provided and agreed as follows, with the same force and effect as if the following article were printed in said lease and license as one of the conditions thereof:—

Five. The lessee shall pay to the lessor as rental or royalty for the term of one year herein provided for the sum of three hundred dollars

8355

($300.00), payable in equal monthly payments of twenty-five dollars ($25.00) each. Said payments of twenty-five dollars ($25.00) each shall be made to the lessor at its office in Boston, Massachusetts, on or before the fifth day of each calendar month.

3. The first sentence in article numbered Ten in said lease and license, beginning with the words, "This lease and license" and ending with the words "date hereof" is hereby stricken out, and in lieu thereof the following sentence is substituted with the same force and effect as if so printed in said lease and license:

This lease and license shall continue, unless sooner terminated by the lessor by notice or because of breach thereof on the part of the lessee, or otherwise as herein provided, for one year from the date hereof.

Excepting as herein expressly provided none of the conditions, agreements, stipulations or provisions of said lease and license are in anywise waived or modified, but the same are and shall remain in full force and effect.

In witness whereof the parties hereto have duly executed this instrument in duplicate this first day of March, A. D. 1905.

UNITED SHOE MACHINERY COMPANY

[CORPORATE SEAL] By S. W. Winslow, President.

HOUGHTON HEEL & LEATHER COMPANY

By Henry C. Attwill, Treas.

Article Five of Pulling Over System Lease and License Agreement, No. 1972, dated February Twenty-seventh, 1911, granted by the United Shoe Machinery Company, as lessor, to A. Garside & Sons, of New York, N. Y., as lessee, covering

One Rex Pulling Over Machine No. 2644

is hereby changed to read as follows:

"Five. The machinery hereby leased or held by the lessee under other lease or license agreement from the lessor shall be used only in the manufacture or preparation of boots, shoes or other footwear made by or for the lessee and shall be used for no other purpose than for performing the work for which it is designed and leased. The machin-

ery of the Pulling Over System of the lessor hereby leased or held by the lessee under other lease or license agreement from the lessor shall not nor shall any thereof be used in the manufacture of any boots, shoes or other footwear upon which any operation for which any of the machines of the lessor mentioned by name in the foregoing schedule of machines are designed, has been or is to be performed by machinery not held by the lessee under lease from the lessor. Subject to the foregoing limitations, the lessee shall use all Rex Pulling Over Machines held by him under lease from the lessor to their full capacity upon all boots, shoes or other footwear or portions thereof made by or for the lessee in the manufacture or preparation of which such machines are capable of being used and shall use all other machinery of the Pulling Over System of the lessor held by him under lease from the lessor to its full capacity upon all work in the manufacture or preparation of boots, shoes and other footwear, or portions thereof, which is done by or for the lessee by the aid of machinery and which is of a kind which such machinery is designed to perform."

Except as herein expressly provided none of the conditions, stipulations or provisions contained in said Lease and License Agreement is hereby in any way waived or modified.

Dated this Twenty-seventh day of February, 1911.

A. GARSIDE & SONS

[SEAL] By John R. Garside, Pres.

UNITED SHOE MACHINERY CO.

[SEAL] By L. A. Coolidge, Treas.

R. A. Blackwell, Assistant Secretary.

June 14, 1909.

Davis Boot & Shoe Co., Richmond, Va.

Dear Sirs:— Referring to our Pulling Over lease to you (Form A. E. E. 1095) covering Rex Pulling Over Machines Nos. 393, 2016, 2029, 2046, 2047, and 2062, together with other machines of the Pulling Over System referred to in said lease and auxiliary to said Pulling Over Machines, we beg to say that it is understood and agreed that nothing contained in said lease shall be construed to prevent the lessee from pulling over by hand such portion of the footwear

manufactured by or for the lessee as is in excess of the capacity of the machinery leased for use in the factory in which said footwear is pulled over.

Very truly yours,

UNITED SHOE MACHINERY COMPANY,
By Wallace F. Robinson, Vice-President.

DEFENDANTS' EXHIBIT 331.

[Put in Evidence, page 4360.]

MEMORANDUM OF WELT AND TURN SHOE MACHINES AND OUTSOLE STITCHING MACHINES OFFERED TO SHOE MANUFACTURERS.

1899 TO 1911, INCLUSIVE. PURITAN STITCHING MACHINE — FOR FAIRSTITCHING, AND THE NATIONAL STITCHING MACHINE — FOR THE SAME WORK, AS WELL AS THE McKAY SEWING MACHINES COULD BE PROCURED AT ANY TIME DURING THE ABOVE PERIOD FROM MANUFACTURERS OF SAME, OR SECOND-HAND DEALERS.

1899

Mills Turned Shoe Machine. Stanley Manufacturing Company, 117 Lincoln Street, Boston, Mass.

The above machine was advertised in the "Superintendent & Foreman" on March 7, 1899, (Page 2) and also on dates prior and subsequent; and it was stated in the advertisement, "Sold without royalty".

1900 also 1901, 1902 and 1903.

Loop-Lock Turn Shoe Machine. Loop-Lock Machine Company, 100 Purchase Street, Boston, Mass.

The above concern advertised their machines in "Superintendent & Foreman", issue of December 25, 1900, and throughout the entire year of 1901; and I believe they were offered prior to that date. They were also offering their machines to the trade in 1902 and 1903, and during the latter year tried to sell their machines to us.

They installed their machines in several factories in different districts, including Hervey E. Guptill, Haverhill; C. K. Fox, Haverhill; Morrison Shoe Company, Concord, N. H.; H. E. Davis Company,

Freeport, Maine; H. B. Eastman, Hampstead, N. H.; Best Ever Shoe Company, Lynn, Mass.

1903 also 1904 to 1911 inclusive.

Champion Outsole Stitching Machine.

Champion Shoe Machinery Company,
St. Louis, Mo.

This company supplied machines principally for shoe repairing, but in 1905 our Mr. Hadaway saw one of these machines in use at one of the shoe factories in the States Prison at Jefferson City, Mo., stitching foreparts of shoes.

1903 also 1904 to 1910, inclusive.

Welt and Turn Sets. Duplessis Shoe Machinery Company,
Haverhill, Mass.

The above concern had nine or more Turn Shoe Machines installed in and about Haverhill, Mass., before January 1, 1904 (with such concerns as Parsley & Brown, S. B. McNamara, C. K. Fox, George B. Leavitt — all of Haverhill — and others).

Mr. Frank Chauteauneuf (who is now in our employ) was with the above concern from 1902 (when they were in Canada and before coming to Haverhill, to which place they moved in January, 1903, and commenced to put out machines at about April of the same year) to 1910 inclusive, and he informs me that they continued to offer machines to the trade up to early in 1910.

1904 also 1905, 1906 and 1910.

Heys Turn Shoe Machines. Bresnahan Shoe Machinery Company,
Lynn, Mass.

Machines were supplied by the above company to the Criterion Shoe Company, Beverly, Mass., about November, 1904, and they were used by this concern up to the fall of 1908 and possibly longer. Our Lynn Office believes this concern has some Duplessis Welt and Turn Shoe Machines and R. H. Long Outsole Stitching Machines. They say we do not have ready access to this factory, but they will try to have this statement verified.

The Bresnahan Company also installed machines in Lynn and Salem, and Connecticut.

I am informed by Mr. Donlon that the Bresnahan Shoe Machinery Company offered the Heys Turn Shoe Sewing Machine up to and including 1906, after which time Mr. Bresnahan went with T. G. Plant, and discontinued offering machines to the trade until 1910, when he organized the firm of M. V. Bresnahan & Company — of which Mr. Donlon was a partner; and Welt and Turn Shoe Machines and Outsole Stitching Machines were offered to the trade during 1910.

1907 (?) (Probably earlier than this)

Also 1908 to 1911, inclusive.

Outsole Stitching Machines. Union Lockstitch Machine Company, Boston, Mass.

Straight Needle Machines have been supplied regularly to the trade; and in the "Superintendent & Foreman", issue of July 26, 1911, Page 17, the above company, under address of #299 Marginal Street, East Boston, Mass., advertised a Union Curved Needle High Speed Stitcher, and stated "Designed to stitch outsoles and also welted or inseam work."

1908 or 1909 (About January 1)

Welt Sewing and Outsole Stitching Machines.

Larsen Machines Company,
100 Covert Street, Brooklyn, N. Y.
Afterwards 291 Broadway, New York City.

About January 1, 1909, the above concern opened an office and show room at 100 Covert Street, Brooklyn, N. Y., when they offered to shoe manufacturers in the New York district their Welt Sewing and Outsole Stitching Machines. (Prior to the above date they tried to sell their enterprise to us, and the machines were examined by Mr. William C. Meyer, Mr. George E. Warren, Mr. George F. Wolfe and Mr. F. G. King; and it was recommended that they not be purchased by us).

The office of the Larsen Machines Company is now located at 291 Broadway, New York City, where it has been for some time.

1910 also 1911

Fox Turn Shoe Sewing Machine.

The first machine of this type of which we have any record was

installed in the factory of F. M. Hodgson, Haverhill, under date of May 1, 1910.

Advertisement appeared in "Superintendent & Foreman", issue of January 25, 1911, Page 39, referring to machine as follows:

Webster Turn Shoe Sewing Machine

Haverhill Channeling Machine Company,
601 Kimball Building, Boston, Mass.

Also advertisement in same paper, issues of March 15, 1911, Page 47, and May 31, 1911, Page 25; together with reading notice by Haverhill Shoe Machinery Company, Haverhill, Mass., offering machines "Supplied at a fixed sale price, per pair royalty, or rental basis".

1910 also 1911

Welt and Turn Sets. Hamel Shoe Machinery Company,
Haverhill, Mass.

The above concern took over the business of the Duplessis Company and offered the same line of machines from early in 1910 up to the present time (January, 1914). I understand some changes in construction of machines have been made.

1910 also 1911

Welt Set Machinery. R. H. Long Shoe Machinery Company,
So. Framingham, Mass.

In the fall of 1910 A. M. Creighton, Lynn, together with his superintendent, Mr. Connor, visited the factory of the R. H. Long Shoe Machinery Company, and the above line of machines was offered to them to be installed in their factory in Lynn, for making welt shoes.

A Welter and a Stitcher manufactured by the above Machinery Company were installed in the factory of the Buffalo Shoe Company, Pepperell, Mass., during the spring of 1911 — or about that time — and, I understand, have been offered to the trade generally.

1910 also 1911

Welt Set Machinery. Universal Shoe Machinery Company,
St. Louis, Mo.

I understand this company was organized by Mr. Dobyne, principal owner of the Champion Shoe Machinery Company, and others, in

1910; and a line of machinery was exhibited in operation, and offered to the trade, at the Mechanics' Fair Building in Boston during the summer of 1911. Some machines were later supplied to the Non-Royalty Shoe Company, St. Louis, Mo.

1910

Foreign Makes of Welt and Turn Sets of Machinery were advertised in several issues of the "Superintendent & Foreman" by the following:

Nollesche Werke, Weisenfels, Germany.

A. H. Johnson, Leicester, England.

Gimson Company, Leicester, England.

1911

John Callahan, Lynn, Mass.

Reading notice in "Superintendent & Foreman" April 12, 1911, Page 31, in reference to Welt Machine a statement is made —"If Plant's machinery is worth $7,000,000, mine is worth $15,000,000".

1911

Foreign Makes of Welt and Turn Sets of Machinery were advertised in several issues of the "Superintendent & Foreman" by the following:

Atlas-Werke-Pohler & Company, Leipsic, Germany. "Welting machinery exactly like any Goodyear."

A. H. Johnson, Leicester, England. "Complete welting plant."

The Standard Engineering Company, Leicester, England. "High Speed Stitcher, Welt Sewers, with all accessory machines."

The Standard Rotary Machine Company, Rushden, Northampton, England. "Are revolutionizing the welting trade." "Complete sets supplied."

Nollesche Werke, Weisenfels, Germany. "Shoe machinery for all departments of manufacture."

Moenus Machine Works, Frankfurt, Germany. "Complete Outfits."

Gimson Company, Leicester, England. "Machines for every operation."

Universal Shoe Machinery Company, Ltd., Northampton, England. "For high-grade welting."

1911

Welt Set Machinery. Boylston Shoe Machinery Company, Boston, Mass.

A delegation of St. Louis shoe manufacturers examined the above machinery during January, 1911, and a Turn Shoe Machine was sent to Hervey E. Guptill, Haverhill, Mass., during the spring of 1911; and a Welt Shoe Machine was sent to the Buffalo Shoe Company, Pepperell, Mass., some time about the spring of 1911, and an introduction of the machines to the trade generally was solicited during that year and since then.

DEFENDANTS' EXHIBIT 333.

[Put in Evidence, page 4364.]

January 3, 1912.

Gentlemen: We are in receipt of orders from you for one or more machines of our Goodyear, Pulling-Over, Lasting, Metallic, or Heeling Departments.

In ordering these machines you have requested the Company to lease them to you under the form of lease "where the lessee does not pay in advance a 'lease premium' ".

We assume that you are fully acquainted with the fact that machines in any of these departments may be had from this Company under "initial payment" department form of leases, which leases do not contain those clauses which restrict the use of machines of one department to work that has been done on machines of one, or more, of the other departments. We shall be very glad to furnish you the machines which you have ordered under the "initial payment" form of lease if you prefer. We call this matter to your attention at the present time in order to avoid the possibility of any question of fact regarding this subject in the future.

Kindly notify us promptly of your decision, and with kindest regards, I remain

Very truly yours,

General Manager.

DEFENDANTS' EXHIBIT 334.

[Put in Evidence, page 4381.]

September 2, 1910.

F. E. Leavitt, Esq., Haverhill, Mass.

Dear Sir: We have been requested by you through our Mr. Smith to quote terms for the installation in your factory of the machines hereinafter mentioned upon conditions which will not preclude the use of the same by you in conjunction with certain machinery now in your possession. Complying therewith we beg to say that we will install the following machines under lease at the lease premium indicated — rents and royalties to be at usual rates:

LASTING MACHINE DEPARTMENT.

	Lease Premium
1 Consolidated Hand Method McKay Lasting Machine	$300.00

METALLIC DEPARTMENT.

1 Staple Fastening Machine	100.00
1 Universal Slugging Machine	250.00
1 Loose Nailing Machine	250.00
1 String Nail Tacking Machine	75.00
1 Taper Nail Tacking Machine	75.00

HEELING DEPARTMENT.

1 McKay Automatic Heel Loading & Attaching Machine	400.00
1 McKay Heel Trimming & Randing Machine	150.00
1 Spring Heel Trimming Machine	100.00

GENERAL DEPARTMENT.

1 McKay Sewing Machine	100.00

And that we will sell to you outright the following machines at the prices indicated:

	Price
1 Atlas Leveling Machine, Model A	$500.000
1 Heel Scouring Machine	65.0
1 Twin Edge Setting Machine	150.00
1 Heel Breast Scouring Machine	50.00

		Price
2	Finishing Shafts, 72″ at $12.00 each	24.00
1	Victor Rolling Machine, Model E	250.00
1	Improved Gearless Sole Cutting Machine, Model C	225.00
1	Improved Veneer Press (6 sections)	18.00
1	American Twin Sole Moulding Machine	450.00
1	Apex Channeling Machine	65.00
1	Apex Feather Edge & Shank Reducing Machine, Model A	35.00
1	Apex Channel Opening Machine, Model C	45.00
1	Apex Tap Skiving or Rand Splitting Machine, Model C	50.00
1	Apex Tap & Sole Rounding Machine, Model A	35.00
1	Crescent Toe Gouging Machine, Model C	125.00

Yours very truly,

UNITED SHOE MACHINERY COMPANY

[Put in Evidence, page 4944.]

PLANT U. S. PATENTS CLAIMING INVENTIONS EMBODIED IN PLANT MACHINES.

UPPER CLICKING MACHINE (Plant catalog page 14)

1,030,621 June 25, 1912 — Stewart. General organization.

LIP CUTTER (Plant catalog page 16)

957,959 May 17, 1910 — Hooper. Cutting diagonal slit in channel lip.

INNERSOLE LIP WETTER (Plant catalog page 18)

957,961 May 17, 1910 — Hooper. Concaved grooved tempering roll.

DOUBLE LIP CHANNEL OPENER (Plant catalog page 20)

940,019 Nov. 16, 1909 — Hooper. Particular structure.

SINGLE LIP INNERSOLE CHANNEL OPENER & EDGE COMPRESSOR (Plant catalog page 22)

940,020 Nov. 16, 1909 — Hooper. Edge compression wheel and lip turning tool.

INNERSOLE LIP CUTTER & MARKER (Plant catalog page 24)

958,028 May 17, 1910 — Stewart. General construction for marking the sole to determine commencement and ending of work.

Appln. Ser. No. 412,391 Jan. 24, 1908 — Plant. Cuts channel lip transversely at heel seat, contours heel seat and marks size.

INNERSOLE FLEXOR (Plant catalog page 26)

871,967 Nov. 26, 1907 — Stewart. General organization.

958,029 May 17, 1910 — Stewart. Commercial form of machine.

871,969 Nov. 26, 1907 — Stewart. General construction including the knife for making transverse and longitudinal slashes.

CLOTH CEMENTING POT & DRYING CREEL (Plant catalog page 28)

957,990 May 17, 1910 — McLeod. Cutting and slitting insole reinforcing strips.

958,284 May 17, 1910 — Plant. Canvas cementer.

WELT INNERSOLE (Plant catalog page 30)

958,013 May 17, 1910 — Ryan. Innersole reinforced by slit canvas.

878,453 Feb. 4, 1908 — Bohr. Consolidated edge.

871,968 Nov. 26, 1907 — Stewart. Sole with transverse incisions oblique to the surface.

INNERSOLE CLOTH PLACER (Plant catalog page 34)

883,837 Apr. 7, 1908 — Stewart. General construction.

965,342 July 26, 1910 — Stewart. Commercial form.

INNERSOLE CLOTH TUCKER & LIP TRIMMER (Plant catalog page 36)

945,348 Jan. 4, 1910 — Stanbon. General construction for tucking reinforcing material into the channel by vibrating tucking tool.

940,690 Nov. 23, 1909 — Hooper. Particular construction.

944,239 Dec. 21, 1909 — Hooper. Guides for controlling movement of work.

SOLE ROUNDER (Plant catalog page 38)

874,505 Dec. 24, 1907 — Heys. Knife movement.

958,024 May 17, 1910 — Stanbon. General construction.

944,386 Dec. 28, 1909 — Stanbon. Knife mounting.

OUTSOLE MARKER (Plant catalog page 40)

958,028 May 17, 1910 — Stewart. General construction.

958,033 May 17, 1910 — Stewart. Commercial form.

OUTSOLE FLEXOR (Plant catalog page 42)

MEMORANDUM FOR MR. S. W. WINSLOW

Included in the list of machinery in use at the factories of the Commonwealth Shoe & Leather Company, in the column of machines as obtained from the U. S. M. Co., there have been included 114

Auxiliary Devices and Attachments (which should not be listed as machines), and should be deducted from 584, listed as from the United Company, leaving the total 470. These Devices and Machines are as follows:

73 Tackers (9 Chase Tackers, 64 Hand Tackers)
36 Extension Edge Attachments
5 O. S. Welt Beveling Attachments.

In this remaining list of 470, there are 119 machines, which although now sold by the Company, similar machines could have been purchased from several outside machine manufacturers. If these 119 are deducted and transferred to outside machines, it would make the sum total of outside machines 846 and U. S. M. Co. machines 351. Following is the list of 119 machines:

3 Sole & Upper Stampers
1 Tip Punch
4 Rotary Cementers
3 Channel Cementers
1 Bottom Cementer
1 Leveler
5 Heel Seat Rough Rounders
7 Heel Trimmers
1 McKay Heel Trimmer
1 Heel Seat Beader
53 Edge Trimmers
3 Heel Breasters
4 Heel Breast Scourers
3 Top Piece Scallopers
1 McKay Feather Edger
1 Tip Scourer
2 Stampers
2 Heel Breast Scourers
1 Tip Scourer
1 Channeler
1 Sole Rounder
1 Feather Edge & Shank Reducer

1 Tap & Sole Rounder
1 Splitter
3 Splitters
3 Outsole Channelers
1 Hand Flexible Sole Machine
1 Leveling & Flexing Machine
1 Channel Cementer
6 Improved Gearless Sole Cutters
1 Splitter
1 Heel Builder

Rooms 1017–1031
60 State Street

Branch Exchange Main 6160

Boston, Mass., Feb. 7, 1913.

Hon. George W. Wickersham, Attorney General, Department of Justice, Washington, D. C.

My dear Mr. Wickersham: In 1910 the United Shoe Machinery Company advised its lessees that it proposed to put in effect a plan by which a certain proportion of the royalties should be invested in stock of the corporation, and at the end of a fixed term be distributed to lessees of the Goodyear welting and stitching and turn-sewing machines, who had in all respects observed the obligations of their leases. The period covered by this plan expired December 31, 1912, and the company proposes to make a distribution on or about March 1st, as it is bound to do by its agreement with the customers.

This plan was, I think, fully called to the attention of Mr. Gregg while he was here examining the affairs of the company and as I read the bill in equity filed by the United States against the company, it does not seem that any complaint is made upon this ground. Under

these circumstances, the Company proposes to make the distribution provided for in that plan on the first day of March, or as soon as possible thereafter; and has desired me to call the matter to your attention that the plan may not be carried out without the knowledge of your department.

I send you herewith a copy of the circular of June 10th, 1910, which describes the plan.

Very truly yours,

CHAS. F. CHOATE, JR.

UNITED SHOE MACHINERY CO.
Albany Building, 205 Lincoln Street,
Boston, Mass.

To the Lessees of the United Shoe Machinery Company:—

When the United Shoe Machinery Company was organized in 1899, it adopted this comprehensive policy: "To furnish a better service and equipment year by year at a constantly diminishing expense to its lessees."

To this policy it has consistently adhered in spite of the fact that the world was then entering on a period of high prices which has lasted ever since. While the leather and labor which go into the making of a shoe have grown more and more costly, there has been a steady decline in the cost to manufacturers of the machinery and supplies which the Company has provided.

It has furnished its lessees with the very best equipment attainable.

It has substituted improved machines for those which have become out of date.

It has substantially done away with payments for installation of machines.

It has reduced its rentals and royalties, sometimes directly, sometimes indirectly by furnishing auxiliary machines without additional royalty charge.

It has increased the number of its branch offices and the extent and efficiency of the service and assistance rendered to its lessees by its experts.

In order promptly to meet the requirements of its lessees and so

give them a better service, it has increased its factory facilities from year to year and has just begun to build an addition containing more than two acres of floor space.

By reason of its large expenditures and investments, far in excess of the ability of any small corporation to make, it is to-day serving its customers, and through them the public, more effectively than would have been thought possible at the time of its formation; yet with less expense to manufacturers than ever before in the history of the trade.

The organization of the Company in 1899 resulted almost immediately in the lowering of the average royalty per pair paid by manufacturers who prior to its organization would have leased the same number and kind of machines from the different constituent companies out of which the United Shoe Machinery Company was formed. In no instance since that time have the average rates of royalty been raised, although the Company has expended several million dollars in improving the machines with which its lessees have been supplied and, without additional royalty charge, has placed in factories numerous auxiliary machines. The average royalty direct and indirect now received by the Company for all classes of shoes is less than $2\frac{2}{3}$ cents per pair; and, in fact, an average payment of $2\frac{2}{3}$ cents per pair will cover the entire cost to shoe manufacturers of the mechanical equipment furnished by the Company, including all charges for depreciation, for the constant employment by the Company of the best experts of the world in the care and maintenance of machines and the instruction of operators, and of a large corps of inventors exclusively engaged in developing and improving machines. The Company keeps the entire outfit of the manufacturer at the highest point of efficiency daily and hourly and places at his disposal all its facilities for that purpose.

Every year since its formation the Company has expended from $300,000 to $750,000 in maintaining its corps of inventors in the Experimental Department, and in the purchase and development of new inventions.

Nearly one hundred new machines have been produced by the Company, all of them materially better than the machines formerly

in use and sixteen of them performing operations which, before their introduction, required skilled hand workmen. By the use of these new machines and improved devices, manufacturers can save annually in cost of production an amount greater than the entire amount of royalties paid at the time the Company was organized. The "Ideal Clicking Machine" alone, which has recently been introduced and which does work hitherto done by hand, should enable the manufacturer using it to save a sum equal to the average royalty now paid for the use of all machines leased by him from the Company. The economies in labor resulting from the use of other new machines range from ten per cent to fifty per cent, and usually with a marked improvement in the quality of the work.

Immediately after its formation, the Company was confronted with a proposition to increase to its lessees the price of material used in the machines of the Metallic Department (the profit on which constitutes the rental and royalty received by the Company from the machines in this department) such an increase having been determined upon by one of its constituent companies which made and leased Metallic Machines and which, had it remained a separate organization, would have been compelled to resort to an increase in the price of wire and fastenings in order to meet a marked advance in the price of copper. The United Shoe Machinery Company, relying upon economies in other departments, was able to maintain the existing rates and assumed the increased cost of production without imposing any part of the increase upon its customers. The policy then adopted has been followed consistently ever since, regardless of the market price of materials, and in many individual instances the Company has found it possible to lower its charges. In its General Department alone, for instance, there has been a reduction in the price of seven hundred and fifty-five commodities, comprising findings and shoemakers' supplies, averaging 25.6 per cent.

Thus the shoe manufacturers, and through them the public, have benefitted substantially from the magnitude and great diversity of the Company's business. The fact that several companies of limited scope, each confined in its work to a particular class of operations, were gathered into a single large company of ample range and abundant

facilities capable of supplying to its customers a complete and perfect system of machinery, has been an unqualified advantage to the trade.

Initial charges for the installation of machines were almost universal prior to 1899. Such charges have been gradually abolished; to the obvious advantage of the manufacturer. For example:— Under the lease premium formerly in force, machines of the Goodyear Department, for making five hundred pairs of Goodyear Welt shoes per day, required an initial payment of $2,845.00 for installation. Under the loan lease now in force, this payment has been replaced by a yearly rental of only $106.00. There is a corresponding saving to the manufacturer in equipping his factory with machines of all other departments in which initial payments have been abolished. Substantially the last of these payments was removed recently, when the Company began to offer to its lessees machines of the General Department on rental terms so low as merely to care for the items of depreciation and replacement, without yielding, any return for its services in looking after the machines.

Benefits of a character similar to those enumerated have marked the course of the Company from the very beginning; but it has never been its purpose to confine within limits determined in advance, its ability to enhance the prosperity of the trade. Always recognizning that it has a common interest with its lessees and that its prosperity depends upon theirs, it has long had in contemplation the following plan, which, now that the elimination of initial charges has been effected, it is prepared to put into operation — a plan which is in conformity with its established policy and which it believes will result in the expansion of its own business through the increased business of its customers.

Beginning with January 1, 1910, the Company will create a fund by investing each year, for three years, in the common stock of the United Shoe Machinery Corporation a percentage, increasing each year, of the amounts received from its lessees for the use of its Goodyear Welting, Goodyear Stitching and Goodyear Turn Sewing Machines in the United States, and will add to that fund from time to time the dividends which shall have been paid in the meantime

upon such stock, or shares of the common stock of the Corporation purchased with such dividends. At the end of three years from that date it will distribute the entire amount of stock held in the fund among those lessees who use the Goodyear Welting, Goodyear Stitching and Goodyear Turn Sewing Machines in the United States and who shall have faithfully observed the covenants of their leases; each lessee of these classes of machines to receive a share of the entire fund proportionate to the amounts paid by him for the use of such machines.

The beneficial interest of each lessee in the stock held in the fund, while undistributed, shall not be assignable by his own act or by operation of law, or be subject to attachment on mesne process, execution, or any legal process, and in the distribution thereof the Company will only recognize the lessees and their executors and administrators as entitled to share therein.

In the determination of all questions which may arise concerning the said fund and the distribution thereof, the Company reserves to itself the right of final decision.

Of the amount received from the use of Goodyear Welters and Stitchers in the United States, during the year ending December 31, 1910, not less than 15 per cent will be invested in accordance with the foregoing plan, and of the amount so received from the use of the Goodyear Turn Sewing Machines, not less than 10 per cent will be so invested.

By order of the Board of Directors,

S. W. WINSLOW,
President.

Boston, Mass., June 10, 1910

DEFENDANTS' EXHIBIT 345.

[Put in Evidence, page 4968.]

Pulling Over System [Form A. E. A., 1028.]

LEASE AND LICENSE NUMBER

Pulling Over System

This Lease and Agreement made at Boston, in the State of Massachusetts, this day of 19 , between the United Shoe Ma-

chinery Company, a corporation organized under the laws of the State of New Jersey, having an office in said Boston, hereinafter referred to as the lessor, of the one part, and of in the State of , hereinafter referred to as the lessee, of the other part:

Witnesseth, that the lessor, in consideration of the covenants and agreements on the part of the lessee herein contained, does hereby lease to and license the lessee under any letters patent belonging to the lessor or under which the lessor has the right to grant such license affecting any inventions which are now or hereafter shall be embodied therein or employed in the operation thereof, to use, subject to the conditions, stipulations and provisions hereinafter contained, the machine or machines designated by number or numbers in the following schedule, viz.:—

SCHEDULE OF MACHINES.

	I.
Class A.	
Rex Pulling Over Machine, No.	$300.
Class B.	
Rex Pounding Machine, No.	125.
Rex Assembling Machine, No.	100.
Rex Toe Gumming Machine, No.	75.
Rex Toe Trimming Machine, No.	50.
Rex Upper Trimming Machine, No.	50.
Rex Upper Trimmer Knife Grinding Machine, No.	25.

and any duplicate parts, extras, mechanisms and devices relating thereto, or used in connection therewith, now attached to or delivered with the said designated machine or machines or which may at any time hereafter be obtained from the lessor, or be added thereto by or with the consent of the lessor.

The term the "principal machinery hereby leased" wherever used herein shall be construed to include the whole of the machine or machines hereby leased included in Class A in the foregoing schedule, together with all duplicate parts, extras, mechanisms and devices relating thereto held by the lessee under these presents, whether now or hereafter delivered to or in the possession of the lessee.

The term the "auxiliary machinery hereby leased" wherever used

herein shall be construed to include the whole of the machine or machines hereby leased included in Class B in the foregoing schedule, together with all duplicate parts, extras, mechanisms and devices relating thereto held by the lessee under these presents, whether now or hereafter delivered to or in the possession of the lessee.

The term the "leased machinery" wherever used herein shall be construed to include both the "principal machinery hereby leased" and the "auxiliary machinery hereby leased."

And that the following are agreed to as conditions of the lease and license of the leased machinery, all of which the lessee covenants and agrees to keep and perform:—

ONE. The leased machinery shall at all times remain and be the sole and exclusive property of the lessor, and the lessee shall have no right of property therein, but only the right to use the same, upon the conditions herein contained. The leased machinery shall be used only by the lessee himself or by operatives in his direct employ, and only in the factory now occupied by him at in the State of unless the lessor shall by an instrument in writing signed by its president, vice-president or treasurer authorize the lessee to remove the leased machinery and to use the same elsewhere. The leased machinery shall not be transferred or delivered or sublet to any other person or corporation, and neither the lease nor the license hereby granted can be assigned by the lessee by his own act or by operation of law. If the lessee becomes insolvent or bankrupt, or has a receiving order made against him, or makes or exceutes any bill of sale, deed of trust or assignement for the benefit of his creditors, or if a sale, mortgage, lease or unauthorized removal of the leased machinery, or any part thereof, be made or attempted, or if any distress or execution or attachment be levied thereon, then and in each such case any or all leases of and licenses to use machinery then existing between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, shall at the option of the lessor cease and determine, and the possession of and full right to and control of all machinery the lease or license of which is so terminated shall thereupon revest in the lessor fee from all claims and demands whatsoever. The lessor and its agents and employees shall at all times

be given access to the leased machinery for the purpose of inspecting it or watching its use and operation, or of altering, repairing, improving, or adding to it, or determining the nature or extent of its use, and the lessee shall afford all reasonable facilities therefor.

TWO. The lessee shall at all times and at his own expense keep the leased machinery in good and efficient working order and condition, and shall not permit any one to injure or deface or remove any plate, or dates, numbers, or other inscriptions now or hereafter impressed on or affixed to the leased machinery by the lessor. The lessee shall obtain from the lessor exclusively, and shall pay therefor at the regular prices from time to time established by the lessor, all the duplicate parts, extras, mechanisms and devices of every kind needed or used in operating, repairing, or renewing the leased machinery, and the same shall form part of released machinery, and the lessee shall not otherwise make or allow to be made any addition, subtraction or alteration to, from, or in the leased machinery, nor interfere with the proper operation of the same.

THREE. The leased machinery shall at all times until the expiration or termination of this lease and license and the redelivery of the leased machinery into the possession of the lessor, as hereinafter provided, be held at the sole risk of the lessee from injury, loss or destruction, and in case any machine or machines hereby leased shall be lost or destroyed by fire or otherwise before such expiration or termination and redelivery, the lessee as partial reimbursement to the lessor for such loss or destruction, shall pay to the lessor in respect to each machine so lost or destroyed the sum set opposite the name of such machine in the column numbered "I" in the schedule of machines hereinbefore contained, and shall forthwith return whatever remains of the machinery so lost or destroyed to the lessor, at Beverly, Massachusetts.

FOUR. The lessee shall pay all taxes and assessments which shall be assessed in respect to the leased machinery or other machinery of the lessor held by the lessee under lease or license, upon whomsoever assessed. All taxes or assessments in respect to leases, licenses or agreements covering machinery, or the rights to payments thereunder, shall be construed, for the purposes of this Article, to be as-

sessed in respect to the machinery itself. In case at any time any unapportioned tax or assessment shall be assessed to the lessor in respect in part, but not wholly, to machinery of the lessor in the possession of the lessee, the lessee shall pay to the lessor such proportionate part of the total amount of said unapportioned tax or assessment as the fair valuation, to be determined by the lessor, of said machinery of the lessor in the possession of the lessee bears to the fair valuation, to be determined by the lessor, of all machinery (excepting machinery, if any, in the lessor's own possession) in respect to which the unapportioned tax or assessment has been assessed; provided, however, that if such unapportioned tax or assesssment includes any tax or assessment in respect to tangible property in the lessor's own possession the amount thereof, based, at the established rate, upon the fair valuation, to be determined by the lessor, of such property, shall first be deducted and the lessee shall pay his proportionate part as aforesaid of the balance only of said unapportioned tax or assessment after such deduction has been made.

FIVE. The lessee shall use the principal machinery hereby leased to its full capacity upon all boots, shoes, and other footwear or portions thereof made by him in the manufacture of which it is capable of being used, except that the leased machinery shall not nor shall any thereof be used in the manufacture of any welted boots, shoes or other footwear which have been or shall be welted in whole or in part or the soles of which have been or shall be in whole or in part stitched or attached by the aid of any welting or sewing or stitching machinery not held by the lessee under lease from the lessor; or in the manufacture of any turned boots, shoes or other footwear the soles of which have been or shall be in whole or in part attached by the aid of any sewing or attaching machinery not held by the lessee under lease from the lessor; or in the manufacture of any boots, shoes or other footwear which have been or shall be lasted otherwise than by Consolidated Hand Method Lasting Machines held by the lessee under lease from the lessor; or which have been or shall be pegged, slugged, heel seat nailed or otherwise partly made by the aid of any pegging or metallic machinery not held by the lessee under lease from the lessor, or the heels of which have been or shall be compressed

or prepared by the lessee in whole or in part or shall be attached by the aid of any heeling machinery not held by the lessee under lease from the lessor.

SIX. The auxiliary machinery hereby leased shall be used only in the manufacture of boots, shoes or other footwear which have been or shall be pulled over by Pulling Over Machines held by the lessee under lease from the lessor.

SEVEN. The lessee shall pay to the lessor the sum of one (1) cent in respect to each pair of boots, shoes or other footwear or portions thereof made by or for him during the continuance of this lease and license of the kind upon which it is provided in Article Five hereof the principal machinery hereby leased shall be used. Payment as herein provided shall be made on the last day of each calendar month in respect to all such boots, shoes or other footwear or portions thereof made by or for the lessee during the next preceding calendar month: **provided, however, that in all cases when the lessee shall pay to the lessor on or before the fifteenth day of the calendar month the amount due in accordance with this Article hereof for the next preceding calendar month, the lessor will in consideration of such prompt payment grant a discount of fifty per cent. from the amount so due for such preceding calendar month.** All payments in this agreement provided for are independent of and in addition to all payments provided for in any other leases or licenses or agreements between the lessor and the lessee, excepting, however, that in case at the date of these presents the lessee has under other Pulling Over System lease and license agreements from the lessor one or more "Rex Pulling Over" Machines in addition to the "Rex Pulling Over" Machine or Machines hereby leased, then payment under and in accordance with this Article hereof in respect to any pair of boots, shoes or other footwear shall relieve the lessee from his obligation to make like payment in respect to that pair of boots, shoes or other footwear under the Article of such other Pulling Over System lease and license agreement or agreements corresponding to this Article hereof. The lessee, however, guarantees that the payments made by him in accordance with the terms of this Article hereof or of like terms contained in other Pulling

Over System lease and license agreements between the lessor and the lessee based upon the number of boots, shoes or other footwear of the kind referred to in Article Five hereof made by or for him shall amount, in each calendar year (after deducting all abatements), to at least Twenty Dollars ($20) for each calendar month for each "Rex Pulling Over" Machine held by the lessee under lease from the lessor and at the end of each calendar year the lessee shall pay to the lessor the amount, if any, by which the total of such payments for said year have been less than such guaranteed amount: provided, however, that if in any calendar year the factory of the lessee remains wholly idle for any entire calendar month, then the amount guaranteed for that year hereunder shall be reduced by one-twelfth for each such month that the factory thus remains wholly idle, but such reduction shall not be made in respect to more than ten (10) months out of any twelve (12) consecutive calendar months.

EIGHTH. The lessor may attach to the leased machinery, or any thereof, an indicator or indicators to register the number of revolutions or movements of any part or parts thereof, and the lessee shall not allow any person (other than the lessor or its agents) to disturb or interfere with such indicator or indicators. In case any indicator thus attached shall from any cause cease to correctly indicate or register, or shall be disturbed or out of repair, or if the glass covering any such indicator shall be removed or broken or injured, then and as often as the same shall happen the lessee shall immediately by writing notify the lessor and at the same time explain the circumstances under which the same has happened. In case any such indicator ceases to indicate, or becomes or remains inaccurate, or the glass covering becomes or remains removed, broken, or injured, because of any fault of the lessee or any one in his employ, or because of the failure of the lessee to give promptly the notice hereinbefore provided for, then, without prejudice to any other rights of the lessor, the lessee shall pay the lessor (without the right to any discount) the sum of two cents per pair for each pair of boots, shoes or other footwear or portions thereof in the manufacture of which the leased machinery or any part thereof shall have been used. The lessee shall keep full and accurate accounts, independently

of any indicators that may be placed upon the leased machinery, showing the number of boots, shoes and other footwear, or portions thereof, made by or for him of the kind upon which the principal machinery hereby leased is capable of being used, and shall allow the lessor at all times, by its agents or attorneys, to examine and to take copies of such accounts and entries of the lessee as may serve to determine the total number of such boots, shoes or other footwear, or portions thereof, and the lessee shall produce all such accounts and entries upon request. The lessee shall require each of his operators upon the principal machinery hereby leased (and also if so requested by the lessor upon the auxiliary machinery hereby leased), or any part thereof, to keep upon blanks or blank-books to be furnished by the lessor accurate daily records of the number of boots, shoes and other footwear, or portions thereof, in the manufacture of which he has used said machinery, or any part thereof, and shall require his operators to sign such records, and, if requested so to do by the lessor, shall verify the same under oath. The lessee shall send to the office of the lessor in Boston, on or before the fifth day of each calendar month, the original records for the next preceding calendar month kept by his operators as above provided for, and in case, in any calendar month, any one or more of the machines hereby leased has been entirely idle, the lessee, on or before the fifth day of the next succeeding calendar month, shall send to the office of the lessor in Boston the blank for such machine or machines for said month marked "not in use" and signed by the lessee. The lessee shall also furnish any further information which may be called for in relation to the leased machinery or the use thereof.

And that the following stipulations and provisions are agreed to:—

NINE. If at any time the lessee shall fail or cease to use exclusively pulling over machinery held by him under lease from the lessor for pulling over all boots, shoes or other footwear made by or for him, which are pulled over by the aid of machinery or which are of the kind upon which the principal machinery hereby leased is capable of being used, the lessor, although it may have waived or ignored prior instances of such failure or cessation, may at its option terminate forthwith by notice in writing any or all leases or licenses

of Pulling Over System machinery, then existing between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise; and the possession of and full right to and control of all machinery the lease or license of which is so terminated shall thereupon revest in the lessor free from all claims and demands whatsoever.

TEN. This lease and license shall continue, unless sooner terminated by the lessor as herein provided, for seventeen years from the date hereof. But if any breach or default shall be made in the observance of any one or more of the conditions, stipulations or provisions herein contained or contained in any other lease or license agreement subsisting between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise and expressed to be obligatory upon the lessee, the lessor shall have the right by notice in writing to the lessee to terminate forthwith any or all leases of or licenses to use machinery then in force between the lessor and the lessee, whether as the result of assignment to the lessor or otherwise, and this notwithstanding that previous breaches or defaults may have been unnoticed, waived, or condoned by or on behalf of the lessor. If, upon the expiration of the full term of this lease and license, the lessor does not request the return of the leased machinery, then the leased machinery shall continue to be held and used under and in accordance with the conditions, stipulations and provisions of this lease and license, which shall thereupon be extended indefinitely as to term; but thereafter either the lessee or the lessor, upon sixty days' notice in writing to the other, may terminate this lease and license, whereupon the leased machinery shall be delivered forthwith to the lessor, as herein provided. Upon the expiration or termination of this lease and license or any extension thereof the lessee shall forthwith deliver the leased machinery to the lessor at Beverly, Massachusetts, in good order, reasonable wear and tear alone excepted, and shall thereupon pay to the lessor without prejudice to any other rights or remedies of the lessor such sum as may be necessary to put the leased machinery in suitable order and condition to lease to another lessee, includiug the cost of all parts replaced at the regular prices established by the lessor therefor. The lessee for himself, his heirs, executors, and administrators, successors and assigns hereby

grants to the lessor, its successors and assigns, full right, power and authority without prejudice to any other rights or remedies of the lessor to enter upon the premises and into any factory, room, or any place where the leased machinery, or any part thereof, may be, and take possession thereof, and take away the same.

ELEVEN. Upon the expiration or termination of this lease and license or any extension thereof the lessee, in addition to all other payments in this lease and license agreement provided for and without prejudice to any other rights or remedies of the lessor, shall pay to the lessor in respect to each "Rex Pulling Over" Machine hereby leased the sum of two hundred dollars ($200) as partial reimbursement to the lessor for deterioration of the leased machinery, expenses in connection with the installation thereof and instruction of operators.

TWELVE. In case the lessee, at any time, shall have in his factory more machines adapted for doing the same work as any auxiliary machine or machines hereby leased than in the opinion of the lessor are sufficient for performing the work which the lessee has in his factory, based upon the capacity of such machines and the number and kind of boots, shoes and other footwear made by the lessee for any period of twelve (12) consecutive months next preceding, the lessor may, at its option, upon thirty (30) days' notice in writing to the lessee, terminate the lease and license herein contained in respect to such of the said auxiliary machines hereby leased as in the opinion of the lessor are unnecessary. The termination under the provisions of this Article of the lease of or license to use any one or more of the machines hereby leased shall not affect the lease or license herein contained in respect to any other machine or machines.

THIRTEEN. In case at any time any of the leased machinery shall not, in the opinion of the lessor, be in good and efficient working order and condition, the lessor without prejudice to any other of its rights or remedies may give written notice to the lessee to put such machinery in good and efficient working order and condition and to replace all broken or missing parts; and in case the lessee does not within (15) fifteen days from the date of such notice comply with the requirements thereof, as herein set forth, the lessor may cause

such machinery to be put in such good and efficient working order and condition, and may supply such broken or missing parts, and the lessee shall forthwith pay to the lessor the expense of making such repairs and the cost at the regular prices established by the lessor therefor of all parts so supplied.

FOURTEEN. A notice in writing, signed by the president, a vice-president, the treasurer or the assistant treasurer of the lessor or by any assignee of the lessor's rights hereunder, and posted by prepaid letter, addressed to the lessee or delivered at his usual or last known place of abode or business, that the lease and license hereby granted is terminated or shall be terminated at the expiration of a certain period, shall be a sufficient termination of the lease and license from the time of posting or delivering such notice, or from the expiration of the period therein mentioned, as the case may be. Any termination of this lease and license shall be without prejudice to any rights or remedies which the lessor may have for violation of contract, use of machines without right, use of patented inventions without license or otherwise.

FIFTEEN. The lessee admits the validity for the full term expressed in the grant thereof (and every extension and renewal thereof) of each and every of the Letters Patent of the United States of America, owned by the lessor or under which it is licensed, any of the inventions of which are or hereafter may be embodied in the leased machinery. The lessee also agrees that he will not directly or indirectly infringe or contest the validity for the full term expressed in the grant thereof or of any extension or renewal thereof of any of the Letters Patent referred to in the "Schedule of Patents" hereto annexed or any of the inventions of which are now or shall hereafter be embodied in the leased machinery or the title of the lessor thereto. The termination or cesser of this lease and license or any extension thereof shall not in any way affect the provisions of this Article, or release or discharge the lessee from the admissions and estoppels herein set forth.

SIXTEEN. None of the conditions, stipulations or provisions, of this lease and license shall be held to have been waived by any act or knowledge of the lessor, its agents or employees, but only by

instrument in writing, signed by the president, a vice-president, or the treasurer of the lessor.

SEVENTEEN. The term "lessor" shall include the said United Shoe Machinery Company and its successors and assigns. All the conditions, stipulations and provisions binding on the lessee shall be binding on and enforceable against his legal representatives. In the construction of this instrument, words relating to the number and gender of the parties shall be read according to their real number and gender.

In Witness Whereof, the parties hereto have duly executed this instrument in duplicate, the day and year first above written.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM 1917.

No. 545.

THE UNITED STATES, APPELLANT,
v.
UNITED SHOE MACHINERY COMPANY OF NEW JERSEY ET AL.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF MASSACHUSETTS.

MOTION TO ADVANCE.

Now come the appellees above named by their counsel, Charles F. Choate, Jr., and move that this cause be advanced upon the docket of this court and set down for hearing upon some early date to be fixed by this court, upon the following grounds: —

(1) This is a suit in equity brought by the United States, petitioner, against the United Shoe Machinery Company, of New Jersey, and others, under the Act of Congress entitled "An Act to protect trade and commerce against unlawful restraints and monopolies", approved July 2, 1890. The petition was filed on December 12, 1911. On May 20, 1912, the Attorney General filed with the clerk of the United States District Court for the District of Massachusetts, in which court the petition in this case was then pending, a "Certificate for

Speedy Hearing under the Act of Congress of February 11, 1903", stating "that said suit is in my opinion a case of general public importance", and requesting "that the said case shall be given precedence over other cases in said court and be assigned for hearing at the earliest practicable date before not less than three judges of said circuit, as is provided by the said Act of February 11, 1903". The trial upon the merits was begun May 20, 1913, and was concluded June 5, 1914; the three judges who heard the case filed opinions on March 18, 1915; final decree dismissing the petition was entered May 14, 1915; and this appeal was docketed in this court on or shortly before July 1, 1916.

(2) This cause is one of general public interest and importance, involving the application of the Sherman Anti-Trust Law of July 2, 1890, to the business of manufacturing and dealing in shoe machinery and supplies as carried on for many years and to the relations of shoe machinery makers to their customers and the public throughout the United States.

It affects property and rights of the appellees amounting to over $40,000,000 and established business relations of many years standing between the appellees and over 1,000 shoe manufacturers making over 275,000,000 pairs of shoes a year.

The appellant's contentions raise questions not heretofore decided by this court or presented in any cases now pending before this court, including the right to lease machinery patented and unpatented, and define the terms on which it may be used and the right of an owner of patents to acquire other patents and other important questions.

This cause was on motion of the appellees advanced for argument by order of the court and was argued on March 16th to 20th, inclusive, 1917, and by order of the court on May 21, 1917, was ordered to be reargued.

It is of great importance to the appellees, to shoe manufacturers generally, and to others engaged in the business of

dealing in and using machinery that these questions be decided at an early date if possible.

As the petition attacks the character of the agreements under which the appellees lease their machines, the appellees are and will be greatly embarrassed as to their methods of conducting their business until this suit is determined.

Dated September 25, 1917.

CHAS. F. CHOATE, JR.,
Counsel for Appellees.

The appellant above named consents to this application.

Counsel for Appellant.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1916.

No. 545.

THE UNITED STATES, APPELLANT,

v.

UNITED SHOE MACHINERY COMPANY OF NEW JERSEY ET ALS.

BRIEF OF THE APPELLEES IN SUPPORT OF APPELLEES' MOTION TO ADVANCE.

The reasons suggested by the United Stated in opposition to the motion to advance, the appellees respectfully submit, are not sound, and the result of requiring the appellees to wait the event of the second suit brought by the United States would be quite unfair and very oppressive to the appellees for the following reasons: The case at bar was brought in the District Court for the District of Massachusetts, in which State the appellees have their home office, their books and records and the headquarters of all their officers. This suit had for its primary object the dissolution of the corporation.

The attack upon its methods of doing business was incidental to the main purpose of that suit to dissolve the corporation. The Attorney-General of the United States filed an expediting certificate upon the ground that the case was of public importance and was entitled to preced-

ence. The case was thereupon given precedence and was tried and the trial completed before the passage of the Clayton Act. A very large portion of the time between the date of the appeal of the United States and the docketing of the record in this Court was occupied in reducing the mass of testimony to abstract form as required by the Equity Rules and there was certainly no avoidable delay.

A year after the passage of the Clayton Act the United States began a new suit against the appellees, based upon the third section of the Clayton Act, in the District Court for the Eastern District of Missouri, fifteen hundred miles from the home office and headquarters of the appellees. In that case the parties have not even begun to take testimony; indeed, various important preliminary questions now pending before that court must be argued and determined before it is practicable for the parties to begin taking testimony, and when that point is reached testimony must be taken in many places in various parts of the United States, which the respondents estimate will occupy certainly not less than six months and probably more than a year. The case will then be argued and submitted for decision in the District Court. When such decision has been received there remains the long and difficult task of preparing the record for this Court. No certificate has been filed by the Attorney-General in that case certifying that it is a case of public importance or requesting its expedition under the Expediting Act.

In short, the case at bar is a case aimed at the very life and existence of the appellees' companies. The case pending in the Eastern District of Missouri relates only to certain business practices. The case at bar relates to the original organization of the appellees' corporations and their business and conduct through a period of years from 1899 to the date of the filing of the bill in Decem-

ber, 1911. The case pending in the Eastern District of Missouri arises solely out of a new statute which we respectfully contend is not retroactive in its operation and affects only transactions entered upon after its passage.

To delay the case at bar, which is the original and vastly more important case, to wait the result of the trial of a wholly different and subordinate issue which may be two years in reaching this Court would be, we respectfully submit, a great injustice to these appellees.

With respect to the suggestion of the United States that other cases under the Anti-Trust Act have been docketed earlier than the case at bar, we respectfully reply: With the exception of the Harvester case and the United States Steel Corporation case, we are informed and believe that none were earlier originated than the case at bar and that none have yet been advanced for early hearing except the Harvester case and the Steel Corporation case; that the case at bar affects the interest not only of the appellees but over one thousand shoe manufacturers throughout the United States and through them affects the purchasers of their product.

By their Solicitor,

CHAS. F. CHOATE, JR.

In the Supreme Court of the United States.

OCTOBER TERM, 1916.

THE UNITED STATES, APPELLANT,
v.
UNITED SHOE MACHINERY COMPANY OF New Jersey et al. } No. 545.

APPEAL FROM THE DISTRICT COURT OF THE UNITED STATES FOR THE DISTRICT OF MASSACHUSETTS.

SUGGESTIONS OF THE UNITED STATES RELATIVE TO APPELLEES' MOTION TO ADVANCE.

The United States can not concur in appellees' motion to advance this case for argument at a date to be now fixed, for the following reasons:

1. In one of its principal aspects, this case involves the legality under the Anti-Trust Act of July 2, 1890, 26 Stat. 209, of a system of contracts whereby patented machines are leased to manufacturers of shoes upon the condition, amongst others, that the lessees shall use exclusively the machines, supplies, and other commodities of the lessor. In addition to this suit there is now pending in the United States District Court for the Eastern District of Missouri another proceeding (No. 4489) between the same parties involving the legality of the same contracts

under section 3 of the Clayton Act, 38 Stat. 730, 731, reading as follows:

> SEC. 3. That it shall be unlawful for any person engaged in commerce, in the course of such commerce, to lease or make a sale or contract for sale of goods, wares, merchandise, machinery, supplies or other commodities, whether patented or unpatented, for use, consumption or resale within the United States or any Territory thereof or the District of Columbia or any insular possession or other place under the jurisdiction of the United States, or fix a price charged therefor, or discount from, or rebate upon, such price, on the condition, agreement or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies or other commodities of a competitor or competitors of the lessor or seller, where the effect of such lease, sale, or contract for sale or such condition, agreement or understanding may be to substantially lessen competition or tend to create a monopoly in any line of commerce.

Although the two cases involve largely the same state of facts, a decision in the case under the Anti-Trust Act would not be conclusive of the case under the Clayton Act. Counsel for the Government in the case under the Clayton Act expect that it will be finally disposed of in the lower court within the next three months, and if their expectations are realized the case could be appealed to this court in time for hearing either during the latter part of the

present or the beginning of the next term. It is respectfully suggested, therefore, that the convenience of the court and of counsel would be served by postponing the argument in the present case until the case under the Clayton Act has reached this court, in order that they may be heard together.

2. There are now pending in this court six cases under the Anti-Trust Act which by reason of priority in docketing are entitled to precedence over the instant case,[1] including the cases against the International Harvester Company and the United States Steel Corporation, which have been set down for hearing on February 26 next, and the case against the Motion Picture Patents Company, which the court is to-day being asked to advance for hearing on the first Monday in April. There appears to be no sufficient reason for giving this case precedence over other cases of like character standing ahead of it on the docket.

JOHN W. DAVIS,
Solicitor General.

DECEMBER, 1916.

SUPREME COURT OF THE UNITED STATES.

OCTOBER TERM, 1917.

No. 207.

UNITED STATES OF AMERICA, APPELLANT,

v.

UNITED SHOE MACHINERY COMPANY ET AL.

MEMORANDUM SUBMITTED BY DEFENDANTS IN OPPOSITION TO MOTION OF THE ATTORNEY-GENERAL TO CONTINUE ARGUMENT TO NEXT TERM OF COURT.

The United Shoe Machinery Company vigorously opposes the continuance of this cause for argument to the next term of court. Its officers and directors can conceive of no situation that will arise, even if dissolution were decreed, where the financing the company could possibly interfere with the financial operations of the United States. The company has no outstanding bonds or mortgage on its property and has an abundance of quick assets to care for any emergency. Its capital stock is quite small (only $50,000,000) as compared with the capital of the other defendants in anti-trust cases, and its stock is largely held locally, principally where it does business, and is not widely scattered; its credit is good; its customers to whom it leases machines number less than 1100 concerns. Even if dissolution were decreed,

the Court could satisfactorily deal with the situation when the exigency arose, if ever.

The cause is one which was expedited for trial under a certificate of the Attorney-General and was tried before three judges in open court. The entire testimony of all the witnesses and the evidence and all the exhibits were presented in open court to these judges, with the exception of certain technical testimony upon patents which was taken before an examiner. The decision of the Court thus constituted after a trial of this character was in favor of the defendant and all controverted issues of fact were decided in favor of the defendant, particularly controverted issues of fact with reference to the interpretation and effect of its leases with respect to competition of other manufacturers and restraint of trade. The pending appeal is therefore the appeal of the United States.

Shortly after the decision was rendered, namely, in October, 1915, the United States initiated another suit against the defendant in the District Court for the Eastern District of Missouri, claiming that under the provisions of the Clayton Act, so called, certain clauses of leases of the defendant were contrary to the provisions of that law. Whether the clauses of the defendant's leases violate the Clayton Act depends in large measure upon their interpretation and the effect which as a matter of fact they may be found to have upon the trade in shoe machinery.

It is obvious that the decision of this Court in this case wil' be of importance as to many issues in the Clayton Act case, and both court and counsel in that case will be at a great disadvantage in a trial of that case unless they have a decision of this Court upon the issues raised in this case.

Moreover, it is of very vital importance to the defendant to learn authoritatively whether its organization and methods of doing business are open to criticism. It is the owner of about $35,000,000 worth of machinery, which is

in the hands of lessees under the leases which are attacked in this litigation; the royalties paid for the use thereof constitute its principal source of income.

The company in the regular course of business is almost daily called on to furnish machines to its customers and supply new manufacturers; in filling this demand under the lease system it regards certain clauses of its leases objected to by the Government as essential to its reasonable protection. The Government asks in this suit that the company be enjoined from enforcing these clauses but that the machines be left in the hands of lessees, without the protection these clauses afford. The company is in consequence greatly embarrassed in conducting its business, and feels that in fairness its rights should be determined as speedily as possible.

While this litigation is pending, the company and its customers and the trade in general continue in a state of uncertainty as to what the defendant may lawfully do.

The leasing system is one of historical growth and is complicated by many circumstances, and if any change is found by this Court to be required by law, such change will require careful analysis of the conditions and considerable time to work out.

This litigation was begun by a bill in equity filed in December, 1911; the trial of the case began in May, 1913, and was concluded in June, 1914; decision was rendered in March, 1915, and the decree dismissing the Government's bill here appealed from was entered in May, 1915. The preparation of the record, involving the reduction to narrative form of several volumes of testimony in order to comply with the equity rules, involved much time and labor, but the case was docketed in this Court on or about July 1, 1916; was advanced for argument on motion and was first argued in March, 1917. The defendant was advised of the Court's order that the case be reargued in May, 1917; on October 1, 1917, a

motion was presented to the Court that the cause be again advanced for reargument, *which motion the Government did not oppose* though the reasons now presented by the Attorney-General for delay were quite as valid then as now, and the Court assigned the case for argument January 7th. The defendant is ready and desires to submit the case to the Court at that time.

FREDERICK P. FISH,
CHAS. F. CHOATE, JR.,
MALCOLM DONALD,
of Counsel.

COMMONWEALTH OF MASSACHUSETTS.

SUFFOLK, SS. DECEMBER 31, 1917.

I, E. P. Brown, being duly sworn, on oath depose and say, that I am president of the United Shoe Machinery Company; that I have read the foregoing memorandum subscribed by counsel for the company, and to the best of my knowledge and belief the facts therein stated are true, and I further depose and say that the United Shoe Machinery Company, as stated in said memorandum, has no outstanding bonds or mortgage on its property; that its stock is largely held in Massachusetts; that it is in possession of a substantial amount of quick assets and its credit is good, and that I can foresee no situation in its financial affairs where, even in the event of dissolution by order of this Court, the carrying out of a decree to that effect would interfere with the Government's financial operations.

E. P. BROWN.

Subscribed and sworn to before me this thirty-first day of December, A. D. 1917.

OCTOBER TERM, 1916

No. 545

THE UNITED STATES,
Appellant,
v.
UNITED SHOE MACHINERY COMPANY, OF NEW JERSEY, ET AL.,
Appellees.

SUPPLEMENTAL BRIEF FOR UNITED SHOE MACHINERY COMPANY ET AL. IN REPLY TO BRIEF OF THE UNITED STATES.

GENERAL CONSIDERATIONS APPLICABLE TO BRIEF OF THE UNITED STATES.

1. The Brief of the United States seriously misstates and misconstrues the evidence. This is especially true in respect to the leases. In the discussion of their character and effect there is hardly a comment or illustration which does not contain some misstatement of fact or unwarranted assumption.

The result is that the argument of the United States is founded upon conclusions and assumptions which have no foundation in the record.

The attorneys for the United States on this appeal did not try the case in the District Court and they are, there-

fore, not as familiar with the evidence as though they had presented it. This may account for the misstatements on which their argument is founded.

2. The Brief of the United States does not discuss at all the questions which stand at the threshold of this case on appeal, viz., whether or not there is evidence to support the findings of the District Court, and if there is such evidence and the findings of the District Court are, therefore, accepted, whether on the basis of these facts the decree of the District Court should be reversed.

3. The Brief of the United States fails to state the issue made by the petition in this case or to consider whether or not the evidence relates to this issue and supports the charges of the United States.

It contains no specification of errors relied upon, nor does it present any precise statement of the questions involved and the manner in which they are raised.

The charge made by the petition is definite and limited. It charges that the defendants planned to extend unlawfully the lawful patent monopolies held by the constituent companies, and to obtain a complete monopoly of shoe machinery, and that for the accomplishment of this purpose they conceived the idea of acquiring the ownership or control of all concerns engaged in the manufacturing of shoe machinery and then to refuse to sell or lease any shoe machinery of the classes defined as essential machines, unless the shoe manufacturer took practically all other machinery from the defendants and that they carried out this plan and thereby acquired a monopoly. (See main brief, p. 10.)

The Brief of the United States nowhere states this issue or discusses the relation of the evidence to this alleged plan.

In fact it is somewhat difficult to determine from the Brief of the United States just what it contends is the issue before this Court.

The United States does not deny that the United Company's machines are patented, nor does it seriously contend that they are not the best machines in the market, and that they are therefore the machines most desired by shoe manufacturers. It contends that the constituent companies in 1899 were manufacturing these machines under patents and did practically all the business of the country in the machines which they furnished which comprise the principal machines as to which it now claims a monopoly.

It further does not deny that the other machines not manufactured by the constituent companies as to which a monopoly is charged, such as, pulling-over, eyeletting and clicking machines, have been developed and invented by the United Company since its formation.

Accepting these admissions on the part of the United States, it would seem that its contention must be reduced to this, viz., (1) That the alleged competition between the Goodyear Company and the Eppler Company in welt machines, and between the Goodyear Company and the Consolidated Company in lasting machines, made the original formation of the United Company illegal; and (2) that competitors of the United Company in some way would have invented machines superior to or as good as the United Company's machines and would have furnished them upon terms and conditions as satisfactory to shoe manufacturers as those offered by the United Company, and, therefore, would have acquired a larger proportion of the business than they now have, had it not been for the United Company's methods of conducting its business.

The record shows how utterly the United States failed to substantiate these issues. But apart from this they are not the issues in the case. The issue in the case is whether the defendants acting through the United Company planned to acquire a monopoly by acquiring all concerns engaged in the shoe machinery industry and then refusing to lease essential machines unless all other machinery was taken, and whether they carried out this purpose and thereby acquired a monopoly. Even had there been competition between the constituent companies, the consolidation of these companies would not have shown an intent to acquire all concerns engaged in the shoe machinery business, and the leases of the United Company, as the District Court found, certainly do not compel a shoe manufacturer taking one kind of machine to take practically all.

COMMENTS UPON THE PORTION OF THE BRIEF OF THE UNITED STATES TREATING OF THE LEASES.

The United States asserts that irrespective of whether the original formation of the United Company or the subsequent acquisitions by that Company were legal or illegal the defendants have adopted and are enforcing a system of leasing which is unlawful in that it directly and inevitably interferes with the free flow of trade in interstate commerce. (See Brief of the United States, p. 146.)

This is not the charge made by the petition. The petition charges that the clauses in the leases objected to by the petitioner were adopted as part of an unlawful plan, of which the formation of the United Company was a part, and that they constituted only a step in carrying out such unlawful plan, the plan being to obtain a monopoly by acquiring all concerns engaged in the shoe machinery industry and refusing to lease essential machines unless the lessee also took practically all other machines.

Furthermore, the United States does not attempt to limit itself to the specific charges made in the petition as to the leases. The allegations of the petition in respect to the leases are (see main brief, pp. 240–242) that the United Company discontinued selling machines and adopted arbitrary and oppressive leases, which were illegal in that they

(1) Required the lessee to covenant to use the United Company's machines, both of the kind leased and of all other kinds exclusively;

(2) Permitted the United Company to cancel its leases of all machines if these covenants were broken; and

(3) Required the lessee to use the leased machinery for seventeen years.

But further than this the entire argument of the United States is based upon inaccurate statements of fact, half-truths and unwarranted inferences, unfounded and misleading illustrations, and a limited and partial reference to the evidence.

There is scarcely a page of the section relating to the leases which does not contain some inaccurate statement of fact or some unwarranted assumption.

These misstatements show a fundamental misconception or misconstruction on the part of the attorneys for the United States of the character and effect of the leases in respect to basic matters. For example:—

1. They show such misconception or misconstruction in respect to the existence or extent of use of the clauses complained of.

2. They show such misconception or misconstruction in respect to the effect of the clauses (*i.e.*, they do not have the inclusive effect attributed to them).

3. They show such misconception or misconstruction in respect to the inter-relation of the clauses (*i.e.*, their cumulative effect).

4. They fail to analyze the leases or the clauses complained of, they omit to state the purpose of the clauses, and they misconstrue their scope and effect.

The conclusions of the United States as to the effect and character of the leases are, therefore, utterly opposed to the facts. The result is that there is no basis stated in the Brief of the United States for a common argument.

For example, the argument of the United States is based on wholly unwarranted conclusions, such as the following:—

> (p. 254) "The United Company is a 'strong manufacturer'—a giant. It refuses to deal with shoe manufacturers who use independent machines."
>
> (p. 125) "No one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company, . . ."
>
> (p. 161) "The exclusive use clause, for example, obviously limits the freedom of choice of every lessee as to all his future needs for machines of the kind leased and clearly prevents access to him, as a possible customer for any such machines, of all who seek to compete with defendants as to those machines."

These conclusions, like many others in the Brief of the United States, are utterly without foundation.

In the chart attached to the Brief of the United States as Appendix A, and in Appendices C and D, the petitioner undertakes to set forth in detail the clauses in the various leases. We comment on these in Appendices I, II and III of this supplemental brief. In the brief proper the petitioner confines itself to general statements intended to show the general effect of the leases, which statements it attempts to support by a few illustrations. Practically all of these general statements are unfounded or inaccurate and the illustrations used to support them either do not support them at all or are provisions used in a few leases and do not justify a general statement applicable to all the leases.

The result is that the general statements on which the petitioner bases its argument are unfounded and unjustified.

PETITIONER'S STATEMENTS AS TO EXTENT OF USE OF THE CLAUSES.

The leases of the United Company, as we have shown in our main brief, have been developed gradually from the very beginning of the shoe machinery industry. They, therefore, represent an historical growth. The machines of the different departments, such as Goodyear machines, lasting machines, metallic machines, heeling machines, eyeletting machines, pulling-over machines, insole machines, and General Department machines, are leased on different forms of lease and there are likewise different forms used in each department. The leases are adapted to the different kinds of machines to which they relate, to the particular work which such machines do and to the particular conditions on which the machines are leased. The leases for the different classes of machines were developed by the different constituent companies. Thus, the Goodyear machine leases were originally developed by the Goodyear Company, the lasting machine leases by the Consolidated & McKay Lasting Machine Company, the heeling and metallic machine leases by the Heeling and Metallic companies owned by the McKay Company. At the time of the formation of the United Company the leases of each of these companies differed somewhat in their terms and provisions. The United Company, as we have shown in our main brief, continued these leases for more than a year without any change whatsoever and afterwards it made modifications only from time to time as conditions seemed to require it. The United Company, therefore, never adopted a new system of leases, and its modifications on the whole have been comparatively slight and have

not changed the fundamental basis of the leases. The leases which the United Company has from time to time drawn up for new machines invented by it have necessarily been made consistent with the existing leases so far as possible, and their character has necessarily been determined in large part by the existing lease system. The United Company, as the various forms of leases have for some reason been reprinted, has made certain slight changes to make the lease system consistent, such, for example, as making all the terms of the leases seventeen years instead of having them run for the life of the machine leased, or indefinitely during the life of the patents on the machines or on any improvements thereafter placed on the machines, as in most of the constituent company leases. But it has at no time undertaken to formulate a new system of leases.

The result is that the leases of different machines differ in their terms and character. Because a clause is contained in one lease it does not necessarily follow that it is contained in another. General statements based upon a single lease or the effect of a single lease are, therefore, very misleading.

The petitioner's brief gives the impression that the various clauses are contained in most or all of the leases.

Thus it states (p. 149):—

> "The leases are characterized by the inclusion in them of the tying clauses to which reference has been made. They are called 'tying' clauses because they tie the use of the machine leased to the use of machines not covered by the particular lease."

After giving an illustration the brief continues (pp. 149–150):—

"In addition to these clauses there are certain other clauses which make the tying clauses more effective and give to them their maximum effect as destroyers of the possibility of competition with the defendants.

"Examples of the various tying clauses and other clauses which together give the defendants' leasing system its illegal character are set out below."

There then follow in the brief nine separate headings designated as follows:—

1. The seventeen-year term.
2. The "additional machines" clause.
3. The exclusive use clause.
4. The prohibitive clause.
5. The "right to terminate all leases" clause.
6. The "full capacity" clause.
7. The return charge.
8. "Royalty" charges on work not done on defendants' machines.
9. Discriminatory royalty charges where competitors' machines are used by the lessee.

On page 160 it is stated that all the defendants' leases provide for a seventeen-year term and all contain the "right to terminate all leases" clause and that the varying use of the other clauses noted above appears from the summaries to be found in Appendices C and D. However, the impression left is that all those clauses are contained in all the leases, or at least that they are typical of all the leases, and further in respect to several of the clauses a direct and erroneous statement is made as to their use.

For example, the brief states (p. 163):—

> "This latter field however is closed by the exclusive use clause. *Every lease* has that clause or an equivalent" (italics theirs).

In other words the petitioner's brief states that every lease contains the exclusive use clause or an equivalent clause.

That this is not true is shown by a cursory examination of the leases and by an examination of Appendix D attached to the petitioner's brief.

The purpose of the exclusive use clause is to give the lessor an option to withdraw its machines on which the royalty is based on the use of the machine, if owing to the use by the shoe manufacturer of other machines of the same kind, the lessor finds that its machines are used only occasionally or only on slow or difficult work, or that proper reports of the amount of work done on its machines are not made by the lessee so that the lessor does not receive or has reason to believe that it is not receiving a fair return on its investment. (See main brief, pp. 311–318.)

The clause is, therefore, used only in leases of machines on which a royalty based on the use of the machine is charged. It is not used in the lease of the McKay sewing machine (P.'s Ex. 170, R. Vol. 4, p. 1161). It is applied to leases of Goodyear welters and stitchers, because these are machines on which the royalty for the Goodyear set is based, but it is not applied to the forty-three Goodyear auxiliary machines, because no separate royalty is charged for their use. It is not applied to the leases of General Department machines, because a fixed annual payment or an initial payment and not a royalty based on use is charged for such machines (P.'s Exs. 40, 41, R. Vol. 3, pp. 373–387).

Out of 90,276 machines leased by the United Company on March 1, 1911, over 53,000 were Goodyear auxiliary and General Department machines, as to which the exclusive use cancellation clause was not applicable, nor was any equivalent clause applicable. (See main brief, p. 316.)

The statement in the petitioner's brief that every lease contains this clause is, therefore, grossly inaccurate.

In respect to certain of the other clauses referred to, the following limitations on their use should be noted:—

1. The full capacity clause (referred to in petitioner's brief at page 154), like the exclusive use clause, is intended to protect the lessor in respect to machines leased for a royalty dependent on the use of the machine. (See main brief, pp. 306–311.) Where a machine is leased to be paid for only to the extent it is used, it is obvious that the lessor must require the lessee to agree to use it when the lessee has work which the machine can perform. Where an annual rental or an initial payment and no royalty based on use is charged for the machine the full capacity clause is not necessary, as the lessor will get the same return whether or not the machine is used. For this reason the full capacity clause is not used in leases of General Department machines, in the lease of the McKay sewing machine, or in respect to the Goodyear auxiliary machines. (See main brief, p. 307.)

The result is that it is not used in respect to more than half in number of the machines held under lease.

2. The clause described by the petitioner as the "prohibitive" or "tying" clause (referred to at page 152 of the petitioner's brief) differs very much in the different leases.

In the clause quoted at page 152 the restrictions are that the machine shall not be used except on shoes on which

the United Company's Goodyear welter and stitcher and turn sewer (which is the same machine as the Goodyear welter), its pulling-over and metallic machines are used. Many if not most of the restricted clauses are less inclusive than this. For example, the hand method welt machine is restricted only to use with the Goodyear welter and stitcher.

Furthermore, of course, this clause is employed (except in the case of certain auxiliary machines) only in alternative forms of lease. Thus lessees can obtain the machines of any department on leases which do not restrict them to use with machines of other departments, except in the case of General Department machines, in respect to which the lessee can purchase them outright without any restrictions whatsoever.

3. The clause quoted at pages 150–151 of the petitioner's brief as an example of the "additional machines clause" does not require the lessee to take additional machines at all. It merely provides that if the lessee has additional work *he shall either take additional machines from the lessor* or the *lessor may if it so elects cancel its leases of metallic machinery*. The lessee is free to use a competitor's metallic machinery and is not required to take additional machines from the lessor. The clause merely provides that if the lessee prefers a competitor's machines, the lessor may at its option withdraw its own machines. In other words, the clause quoted has exactly the same effect as the exclusive use clause and does not obligate the lessee to do anything.

This clause quoted at pages 150–151 was contained in only a few of the forms of the leases of the United Company, most of which are now obsolete.

The additional machinery clause used by the Consoli-

dated & McKay Company in many of its leases and by the Goodyear Company in its lease for turn sewing machines, prior to the formation of the United Company, actually required the lessee to take additional machines and thus required an exclusive use of these machines.

The additional machinery clause was continued only to a limited extent by the United Company after its formation, and abandoned in all leases put out after 1907. (See main brief, pp. 323–326.)

4. The clause requiring the lessee to pay a return charge (referred to in petitioner's brief at page 154) is used only in those leases in which an initial payment is not required. If a machine were leased without an initial payment, and for some reason the lease was terminated or the machine returned shortly afterwards, the lessor would have been put to considerable expense for which it would have received no return or no substantial return. This return payment is expressly stated in the clause quoted at pages 154–155 of the petitioner's brief to be,

> "partial reimbursement to the lessor for deterioration of the leased machinery, expenses in connection with the installation thereof and instruction of operators."

5. The clause referred to in the petitioner's brief (p. 155) as royalty charges on work not done on defendants' machines is taken from a lease of Goodyear machines in which the machines are leased without initial payment.

This is only an alternative form of lease. Any lessee can obtain the Goodyear machines on a lease not containing this clause by paying the initial payments required of all lessees prior to 1905 (R. Vol. 1, p. 442, lines 4–12). It is used in no other leases except certain leases of pulling-over machines.

6. Under the heading "Discriminatory Royalty Charges Where Competitors' Machines Are Used By The Lessee" (p. 157), the United States quotes a clause from the United Company's clicking machine lease, under which lease no direct royalty is charged if the machine is used in connection with the United Company's Goodyear welter and stitcher and the United Company's lasting machines, the United Company in such a case getting its return indirectly from the royalties paid for those machines, but a direct royalty is charged where the clicking machine is used with other welters, stitchers, and lasting machines, as otherwise the United Company would get no return for its clicking machine. (For a discussion of this clause, see *infra*, pp. 46–47.)

This clause is employed only in the lease of the clicking machine and in no other lease.

The petitioner's brief, after characterizing the clause, states (p. 158):—

"An example of such a clause is the following,—"

The effect is to give the impression that this clause is employed generally in the United Company's leases.

PETITIONER'S MISSTATEMENTS AS TO THE SCOPE AND EFFECT OF THE RESTRICTED USE CLAUSE.

The petitioner's brief gives a wholly erroneous view of the effect of the restricted use clause and makes statements in respect to it which are utterly without foundation.

The actual effect of the restricted use clause is extremely limited, as we have shown in our main brief. (See main brief, pp. 366–373.)

We shall consider below a few of the misstatements in the petitioner's brief in respect to this clause.

At page 125 of its brief, the petitioner says:—

> "No one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company, therefore not upon a shoe operated on by a McKay machine procured outside of the United Company. The lasting machine is virtually, if not absolutely controlled by the United Company. Practically, every shoe manufacturer in the United States must have it. Therefore, every such manufacturer must also procure his McKay machines from the United Company.
>
> "In consequence, the United Company by procuring control of the McKay sewing machine completed its monopoly of every important machine used in bottoming shoes."

The statement made by the petitioner, in other words, is:—

(1) The United Company absolutely controls the lasting machine. Every shoe manufacturer must obtain his lasting machines from the United Company.

(2) Under the United Company's leases lasting machines cannot be used on shoes on which any machines obtained from competitors are operated. If, therefore, a shoe manufacturer uses the United Company's lasting machines, he cannot use any other machines of any kind obtained from competitors.

(3) Lasting machines obtained from the United Company, therefore, cannot be used on shoes on which a McKay machine obtained from a competitor is used.

The petitioner's conclusion, therefore, is that all shoe manufacturers must use and do use the United Company's McKay sewing machines.

Each one of these statements is untrue and the conclusion is likewise untrue.

In the first place, lasting machines can be obtained from other persons than the United Company. (See *infra*, pp. 155–157.)

In the second place, any lessee may obtain lasting machines from the United Company on unrestricted leases which do not restrict their use to use with any machines of any other kind whatsoever.

For example, he may obtain the hand method McKay lasting machine without any restrictions by paying an initial payment of $300. Furthermore, under this lease he is required to pay only ½ of a cent royalty per pair of shoes, while under the restricted lease the royalty is ⅝ of a cent per pair. (See main brief, pp. 288–289.)

He may obtain the hand method welt lasting machine without any restriction as to use with other machines by making an initial payment of $300. Under this lease he pays the same royalty per pair as under the restricted lease. (See main brief, p. 289.)

He may obtain the No. 5 lasting machine, a new type of lasting machine invented and developed by the United Company and first put out about 1908, without any restriction as to use with other machines by making an initial payment of $300. (See P.'s Ex. 22, R. Vol. 3, p. 193, par. Five.) The royalty will be the same as under the restricted lease.

The above-mentioned lasting machines are the machines now in general commercial use, the other types having become practically obsolete.

Even if he does not desire to make an initial payment and therefore takes his lasting machine or machines under

restricted leases, such restricted leases have no such effect as the petitioner states.

The restricted lease of the hand method McKay machine restricts its use only in connection with the Goodyear welter and stitcher and the United Company's metallic machines. As the machine is only adapted for use on McKay shoes, on which the welter and stitcher are never used, the restriction runs only to use with the United Company's metallic machines.

Thus a shoe manufacturer of McKay shoes can take the hand method McKay lasting machine under the restricted lease and use with it any competitor's machines he may desire except metallic fastening machines. In other words, he may use in connection with a competitor's heeling machines, eyeletting machines, pulling-over machines, lacing machines, McKay sewing machines, and General Department machines (of which there are one hundred and seventy different types), button-hole machines, or with any machines not manufactured by the United Company such as machines for sewing the uppers of shoes.

The restricted lease of the hand method welt lasting machine restricts it to use only with the United Company's welter and stitcher, that is, to two machines out of over three hundred manufactured by the United Company. (See main brief, p. 289.)

In other words, a shoe manufacturer making welt shoes can take the hand method welt laster and may use it in connection with any machines whatsoever obtained from a competitor except the welter and stitcher. He may use it with any one of forty-three Goodyear auxiliary machines obtained from a competitor, or with a competitor's pulling-

over, metallic, eyeletting, heeling, lacing, insole and General Department machines, button-hole machines, or machines not manufactured by the United Company such as machines for sewing the uppers of shoes.

The No. 5 lasting machine under the restricted form of lease is restricted to use with the United Company's welter and stitcher, pulling-over and metallic machines.

A lessee taking this machine under the restricted lease may therefore use it in connection with a competitor's Goodyear auxiliary machines (of which there are forty-three), heeling machines, McKay sewing machines, eyeletting machines, lacing machines, insole machines, General Department machines, button-hole machines, and other machines not manufactured by the United Company, such as machines for sewing the uppers.

It will thus be seen how utterly without foundation is the petitioner's statement that

> "No one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company. . . . ."

And also its further statement (p. 125),—

> " . . . therefore not upon a shoe operated on by a McKay machine procured outside of the United Company."

It will be noted that not one of these restricted leases of lasting machines restricts the use of the machine to use in connection with the United Company's McKay sewing machines. A shoe manufacturer is absolutely free to take any form of lasting machine put out by the United Company under a restricted lease and use it in connection with McKay machines obtained from competitors.

Therefore, the petitioner's conclusion that shoe manufacturers taking the United Company's lasting machines must necessarily use the United Company's McKay sewing machine is absolutely untrue.

This is shown not only by the leases themselves which we have examined above, but also by the facts in respect to the use of competitors' McKay sewing machines.

For example, in 1909 there were in the principal shoe manufacturing districts 1,488 McKay sewing machines, of which only 308 had been supplied by the United Company and 1,180 had been supplied by others. In the Lynn district there were 59 McKay sewing machines supplied by the United Company and 367 supplied by others (R. Vol. 1, p. 977, lines 16–31; see also main brief, p. 563).

Mr. Jonathan Brown, Jr., a large manufacturer of McKay shoes who used the United Company's lasting machines (Defs.' Ex. 236), testified that he had thirteen McKay sewing machines, of which he owned ten and obtained three from the United Company on lease.

> "The United Company has never caused us any difficulty or interfered with us in connection with our buying McKay sewing machines while we have their leased McKay sewing machines in our factory. We have done as we wanted to absolutely without any interference" (R. Vol. 1, p. 730, lines 25–30).

It is difficult to see how the petitioner can justify itself in making such statements as the foregoing, each one of which is absolutely without foundation.

The foregoing facts also show the utter lack of foundation for the charge made by the petition. That charge is that the United Company used its so-called essential machines,

namely, the Goodyear welter and stitcher, lasting, metallic, and heeling machines, which the constituent companies manufactured, to compel the use by lessees of other machines. One of the most important of such other machines is the McKay sewing machine. The McKay sewing machine was the first important shoe machine ever invented (R. Vol. 1, p. 521, lines 15–17). It was used in uniting the soles to the uppers of nearly forty per cent. of the shoes made in 1910 (Defs.' Ex. 215, R. Vol. 1, p. 424). It was not manufactured by the constituent companies, and when the United Company started to manufacture it, it would obviously, had it had the purpose ascribed to it by the petitioner, have required lessees of some one or more of its so-called essential machines to use them only in connection with its McKay sewing machine. But it has never restricted any of its machines to use with its McKay sewing machine (notwithstanding the statement in the petitioner's brief to the contrary), thus absolutely disproving the contention of the United States.

The assumption (without any foundation in fact) that the restricted use or "tying clauses" restrict the use of each machine or of certain so-called essential machines, to use with all other machines runs all through the petitioner's discussion of the leases.

Examples of other misstatements as to this clause are given below.

For a discussion of its actual scope and effect see our main brief, pages 346–373.

PETITIONER'S ERRONEOUS STATEMENTS AS TO THE UNRESTRICTED OR INDEPENDENT LEASES AND THEIR EFFECT.

As stated in our main brief, the United Company offers not only certain restricted leases, but also offers the machines of each department on unrestricted leases which do not restrict them to use with machines of any other department. (See main brief, pp. 357–364.)

A shoe manufacturer who does not wish to use a team of the United Company's machines, but wishes to use only its machines of certain departments and to use competitors' machines from other departments, can, if the clauses in the restricted leases for the machines he wishes to take from the United Company stand in the way, take unrestricted leases of those machines.

Of course this right absolutely refutes the contention of the United States that shoe manufacturers taking machines of one department are compelled to use machines of any or all other departments.

The petitioner, however, contends that these unrestricted leases are furnished only on prohibitive terms which cannot be accepted by the lessee and that they, therefore, do not constitute a real alternative.

Of this attempt to prove that the charges for the unrestricted or independent leases are exorbitant the District Court said (R. Vol. 1, p. 1166): —

> "But surely, if the argument is made that there is coercion through an excessive price, such an argument can have no weight whatever for any purpose legal or ethical unless the fact that it is excessive affirmatively appears. From such evidence as is presented

in this case as to the amount of initial charges upon independent leases we can draw no support for the charge of coercion through excessive charges."

In practically all of the independent leases the royalty per pair of shoes is the same as that charged for the restricted leases. The only difference is that an initial payment is required under the independent leases. In the case of the independent lease of the hand method McKay lasting machine the royalty is, moreover, less under the restricted form. (See main brief, p. 288.) In the case of the metallic machines, on which the royalty is received by the purchase of material used in the machines, there is an alternative initial payment form of unrestricted lease, under which the charge for material used is the same as under the restricted form, and also an alternative unrestricted form of lease, in which no initial payment is required, but ten per cent. more is charged for the material used than under the restricted form. (See main brief, p. 291.)

The petitioner in making its contention that the initial payment leases are prohibitive is met at the outset by the fact that the initial payments charged by the United Company are no higher than those charged by the constituent companies at the time of the organization of the United Company. A lessee to-day can get a set of machines on independent leases for less cost than he could in 1899, when the United Company was formed. (See main brief, pp. 358–359.) In addition, he gets much improved machines having a far greater capacity than the machines of 1899; he gets more auxiliary machines; and he gets far better service with his machines.

The truth is that the United Company's rates for ma-

chines at retail, that is, on independent or unrestricted leases, have not been increased although its machines and service have been much improved. The distinction between the price for unrestricted leases, under which machines are taken to be used at retail, and the prices for restricted leases, under which the machines are taken to be used at wholesale, has grown up, not by adopting higher prices for machines leased for use at retail, but by adopting reduced rates from time to time in respect to certain machines when taken to be used under restricted leases, *i.e.*, at wholesale.

The petitioner's brief says (p. 179):—

> "Therefore, Winslow has deliberately formulated two classes of leases, and has so framed the so-called 'independent' class that in his judgment it is more beneficial to the lessee to adopt the other class, which ties him hand and foot to the United Company."

The insinuation in this statement that prices for the independent leases have been deliberately formulated to prevent lessees taking machines on such leases is absolutely without foundation. The charges for these leases have merely continued the same in practically all instances.

The attempt of the petitioner to prove that the price or prices charged for the unrestricted leases are prohibitive is based upon misstatements as to the effect and scope of the restricted leases and upon a misconstruction of other evidence.

On page 176 the petitioner's brief says:—

> ". . . a manufacturer must take the independent lease as to every class of machines, in order to be relieved from the restrictions. For illustration, suppose one entering upon the manufacture of welt shoes should

take restricted leases for lasting and metallic fastening machines, but an independent lease for heeling machines. His independent heeling machine lease would avail him nothing, because his lasting machine and metallic fastening machine leases would prohibit the use of such machines in connection with a heeling machine not owned by the United Company. So, if he were to take independent leases for all machines other than lasting machines, *that one lease* would prohibit the use of the lasting machines in connection with either of the *other classes* of machinery. Hence, the manufacturer must take the *entire* independent system to obtain any freedom whatever" (italics theirs).

Let us see if the foregoing statement is true.

It refers to a lessee who takes from the United Company lasting, metallic and heeling machines.

The petitioner first states that if such a lessee takes restricted leases of lasting and metallic machines these leases (p. 176)

> "would prohibit the use of such machines in connection with a heeling machine not owned by the United Company."

There is no foundation whatsoever for this statement.

None of the United Company's lasting machines which are to-day taken by lessees is restricted to use with its heeling machines. The only lasting machine which was ever so restricted is the McKay & Copeland machine, which was used only for heavy brogans and which is now practically obsolete. None of the United Company's metallic machines has ever been restricted to use with its heeling machines.

The result, therefore, is that a lessee can take both

lasting machines and metallic machines from the United Company on restricted leases without initial payment and use them with a competitor's heeling machine.

A shoe manufacturer desiring to use a competitor's heeling machine would of course not take the United Company's heeling machine, as the petitioner apparently assumes he would do. He would therefore not be required to pay an initial payment for such machine to the United Company. The result is that, without its costing him a cent of additional royalty or initial payment, a lessee can use a competitor's heeling machine with the United Company's lasting and metallic machines. So much for the petitioner's first illustration.

The second illustration used by the petitioner is as follows: Its brief states that if a shoe manufacturer took an independent lease of all his machines other than the lasting machines (p. 176)

> "*that one lease* would prohibit the use of the lasting machines in connection with either of the *other classes* of machinery" (italics theirs),

that is, with his heeling and metallic machines, which are the other classes referred to.

We have shown above that the hand method welt lasting machine is restricted to use only with the Goodyear welter and stitcher. A shoe manufacturer, therefore, making welt shoes can take a restricted lease of a hand method welt laster and can use it in connection with a competitor's metallic and heeling machines.

The hand method McKay lasting machine is restricted to use with the United Company's metallic machines. A shoe manufacturer, therefore, can take a restricted lease of this lasting machine and use it with a competitor's heeling machine.

The No. 5 lasting machine is restricted to use with the United Company's welter and stitcher, pulling-over machines and metallic machines. A lessee of this machine can therefore use it in connection with a competitor's heeling machine.

The petitioner's illustration is therefore entirely untrue as respects the use of the hand method welt lasting machine for use on welt shoes, and is only half true in respect to the hand method McKay machine and the No. 5 machine.

Furthermore, the implication in this statement is obviously unsound. It states not only that the United Company's lasting machine is in all cases restricted to use with its metallic and heeling machines, which as shown above is not so, but it implies that a shoe manufacturer desiring to use the United Company's lasting machine with a competitor's metallic and heeling machines must take from the United Company not only lasting machines, but also metallic and heeling machines on independent leases, and therefore make initial payments for all three classes of machines. Of course this is not so. The shoe manufacturer desiring to use a competitor's heeling and metallic machines would not take such machines from the United Company. Even, therefore, if the United Company's lasting machines were restricted to use with both the metallic and heeling machines (which they are not), the shoe manufacturer would be required to take an independent lease only of the lasting machine, the initial payment for which is only $300.

Surely, this is a small charge to pay for the privilege of using the United Company's lasting machine alone. In such case the cost of service for the machine is much greater

to the United Company and the royalty received from the machine when so used with other machines not especially adapted for use with it is smaller.

Only two lasting machines are required to make 250 pairs of shoes a day (Defs.' Ex. 230). Out of 1,150 factories in 1911, 495 made less than 300 pairs of shoes a day (R. Vol. 1, p. 455). In other words, nearly half the shoe manufacturers in the country would be required to pay only $600 to obtain their lasting machines on independent leases.

The writer of the petitioner's brief carefully refrains from going to the leases to support his statement, which we have analyzed above, but in support of it quotes a remark of Mr. Winslow in which Mr. Winslow failed fully to qualify his statement and the writer sets forth that statement apart from its context and apart from the rest of the record as establishing facts which the record, as shown above, clearly shows to be untrue. Mr. Winslow is quoted as saying (p. 176):—

> "Then he could return our heeling machines, place his machines in the other departments upon the independent forms of leases, and continue to use the heeling machines of others."

Mr. Winslow did not mean to say that all the restricted leases of the United Company's machines, or of its principal machines, restricted such machines to use with the United Company's heeling machines. He obviously meant if the lessee did have any machines of the United Company which were restricted to use with the heeling machines of the United Company, those machines could be transferred to the independent form of lease if the lessee desired to use them with heeling machines not obtained from the United Company.

The only case to which this would apply would be in the case of a lessee, happening to have a McKay & Copeland machine (which machine is now practically obsolete) on the lease form set out in Plaintiff's Exhibit 20, pulling-over machines held upon a restricted form of lease, or eyeletting machines held upon such restricted form of lease.

After establishing to his apparent satisfaction the utterly false conclusion arrived at as the result of the statement analyzed above, the writer of the brief says (p. 177):—

> "This means that the shoe manufacturer would have first to find Pettingill heelers enough to satisfy his wants for heelers, and having done this he would then have to place *all his machines* 'in the other departments upon the independent forms of leases'" (italics theirs),

a statement which as we have shown is absolutely contrary to the fact. And he closes oratorically:—

> "He could not be half slave and half free."

After making the foregoing statements, the brief proceeds deliberately to misconstrue and misapply the testimony of Mr. Winslow on pages 432 to 433 of the record in an endeavor to show that it would cost a shoe manufacturer making a thousand pairs of welt shoes per day $8,833.00 "for the privilege of using the Pettingill heeler."

Mr. Winslow in his testimony was comparing the "savings" in the cost of machines used to manufacture Goodyear welt shoes both as to royalty (R. Vol. 1, p. 430, line 3) and initial cost. He uses as an illustration the cost of installing in a lessee's factory in 1899 and in 1911 machinery for making 300 pairs of welt shoes per day (R. Vol. 1, p. 432, lines 23–31) and for making 1,000 pairs of welt shoes per day (R. Vol. 1, p. 432, lines 44–45, and p. 433, lines

1–12). He showed that for a 1,000-pair factory the cost in 1899 was $11,300.50 and in 1911 $2,467.50, a difference of $8,833. He was not, however, comparing the difference in prices charged for restricted and unrestricted leases in 1911. His figures include not only initial payments, but also the purchase price of certain General Department machines which the lessee was required to purchase in 1899 and which he could obtain on lease in 1911 from the United Company and the rentals charged for the first year for General Department and auxiliary machines. The statement was intended to show to what extent the United Company had lowered the cost of installing machines for making welt shoes and thus encouraged their manufacture. It affords no foundation whatsoever for a comparison of the difference in the prices charged for restricted and unrestricted leases.

Furthermore, even if it did afford a basis for such comparison, the conclusion drawn from it by the United States is absolutely without foundation.

Mr. Winslow refers in his statement to the cost of installing the following machines, viz.: Goodyear machines, lasting machines, metallic machines, heeling machines, and General Department machines (R. Vol. 1, p. 432, lines 23–31). Not a single one of these machines (unless the shoe manufacturer wished to use the McKay & Copeland lasting machine, which was used only for heavy brogans and is now practically obsolete) is restricted under any of the United Company's leases to use with the United Company's heeling machines. The shoe manufacturer can therefore take all of the machines referred to by Mr. Winslow on restricted leases and use them in connection with a competitor's heeling ma-

chine. He would not have to pay a cent more for the machines obtained from the United Company than he would if he also used the United Company's heeling machine in connection with them. The statement in the petitioner's brief therefore (p. 177),—

> "In other words, the owner of such a factory would have to pay at the time Mr. Winslow testified about $8,833.00 for the privilege of using the Pettingill heeler,"

is absolutely without foundation.

Furthermore, the greater part of the difference in cost between the price charged in 1899 for installing this machinery and the price charged in 1911 came from the elimination of initial payments on Goodyear machines. The Goodyear machines are not restricted to use with machines of any other department and therefore, no matter what machines of competitors in other departments he desired to use, the shoe manufacturer could take the Goodyear machines without paying an initial payment on them and use them with such competitor's machines.

Finally, the statement assumes that the lessee would be required to take all his machines from the United Company on independent leases. Even if under the restricted leases all machines were restricted to use with all others (which the brief writer assumes, and which is not the fact), the lessee would obviously not take from the United Company those machines which he preferred to take from a competitor. He would therefore be obliged, at most, to take on initial payment leases only such of the United Company's machines as he desired to use and the restrictions on which in the restricted leases forbade their use with such competitor's machines as he wished to use.

Taking the machines of the departments mentioned by Mr. Winslow in the statement referred to by the brief writer, the following illustrations will show the unfounded character of the assumption that a lessee using a competitor's machine of one department must take unrestricted leases of machines of all departments, and therefore pay the initial premiums on all the United Company's machines of all these departments.

(1) If the lessee wishes to use the United Company's Goodyear machines and a competitor's lasting, metallic, heeling, and General Department machines, he can take his Goodyear machines on the non-initial payment basis and use them in connection with the competitor's lasting, metallic, heeling, and General Department machines, without paying a cent more to the United Company for his Goodyear machines than he would pay for them if he used all the United Company's machines exclusively.

(2) If the lessee wishes to use the United Company's Goodyear and lasting machines and a competitor's metallic, heeling, and General Department machines, he can use the hand method welt laster on the non-initial payment restricted lease (which restricts its use only to use with the Goodyear welter and stitcher) and he can use such Goodyear and lasting machines in connection with a competitor's metallic, heeling, and General Department machines, without paying a cent more to the United Company for them than he would pay if he used all of its machines exclusively.

(3) If the lessee wishes to use the United Company's Goodyear, lasting, and metallic machines and a competitor's heeling machines and General Department machines, he can take his Goodyear machines on the non-initial payment basis and his lasting and metallic machines on non-initial

payment restricted leases and use them in connection with a competitor's heeling and General Department machines without paying a cent more to the United Company for his machines taken from them than he would pay if he used the United Company's machines exclusively.

(4) If the lessee wishes to use the United Company's Goodyear, lasting, metallic, and heeling machines and a competitor's General Department machines, he can take his Goodyear machines on the non-initial payment form of lease and his lasting, metallic, and heeling machines on non-initial payment restricted leases and use them in connection with a competitor's General Department machines and not pay a cent more for them than he would pay if he used also the United Company's General Department machines.

In other words, the above illustrations show that there are many combinations in which the lessee can use the United Company's machines of certain departments and competitors' machines of other departments without paying a cent more to the United Company for the use of its machines than if he used the United Company's machines of all departments exclusively.

In other combinations the lessee may have to take certain machines from the United Company on initial payment leases. (See our main brief, pp. 370–372.)

The foregoing will show the utter absurdity of the petitioner's contention

(1) that to use a single machine of a competitor all other machines must be taken from the United Company on initial payment leases, and

(2) that the lessee must pay the full initial payment for

all the United Company's machines, both those he desires to use and those he does not desire to use.

The foregoing will also show that each combination or situation must be regarded and considered separately. No general rule applicable to all the leases, or all combinations of machines is possible. This is due to the fact that the leases were not adopted at one time, nor were the restrictions adopted at one time, but they are the result of an historical growth. The restrictions, for example, have been employed from time to time to meet special conditions.

For instance, the restriction in the metallic lease was adopted in 1900 because the cost of material had advanced and the United Company did not want to advance the price of material to its lessees. By restricting the machines to use with its Goodyear welter and stitcher and its lasting machines the United Company felt it could lease the metallic machines to be used with such other machines as a set without increasing the price of material. (See our main brief, pp. 276–278.) The restriction in the heeling machine leases was adopted late in 1904 as partial compensation for the removal of the initial payments on the Goodyear machines. (See our main brief, pp. 278–279.)

Underlying these modifications, made from time to time, however, was the principle that when the machines were used together as a set the United Company received a greater royalty from each machine of the set and could care for the machines at less cost per machine, and that, therefore, when so used a reduced or wholesale price was proper. (See our main brief, pp. 333–342.)

The brief writer having made the utterly unfounded statement analyzed above (at p. 177), to the effect that it would cost the shoe manufacturer making 1,000

pairs of welt shoes a day $8,833 to install the Pettingill heeler, proceeds to cite instances of what he refers to as "heavy initial premiums." It does not appear that these amounts are unfair or unreasonable. On the contrary, the evidence shows that Leavitt, one of the persons to whom the brief states leases carrying these high premiums were offered, accepted them (R. Vol. 1, p. 873, lines 10–17), thus showing conclusively that he did not consider the terms prohibitive.

In respect to the statement that the cost to the International Shoe Company of putting all its machines on independent leases would be $250,000, the brief fails to state that the International Shoe Company is one of the largest shoe manufacturers in the world, having $25,000,000 capital, that it has twenty different factories, and that the sum of $250,000 would include the purchase outright of all the General Department machines used by the International Shoe Company. (See our main brief, pp. 361–362.)

Petitioner's brief then proceeds (p. 178):—

> "In this regard, it must not be forgotten that after the shoe manufacturer had paid for the privilege of using an independent machine he was required to pay to the United Company the same royalty, for that machine as if he had taken it upon a 'restricted' lease. And in addition he must pay increased royalties upon certain other United machines—clicking, lasting, and metallic fastening machines, . . . Of course, no shoe manufacturer could afford the luxury of an independent lease under such circumstances."

It is not true that the shoe manufacturer under any form of independent lease would be required to pay an increased royalty on his lasting machine. On the contrary,

on the hand method McKay lasting machine he would pay less. (See our main brief, p. 288.)

It is not true that after he had "paid for the privilege of using an independent machine," by which the writer presumably means after making an initial payment for an independent lease, the lessee would be required to pay an increased royalty for his metallic fastening machines. Under the initial payment form of independent metallic lease the royalty is the same as under the restricted form. Only under the non-initial-payment independent form under which no initial payment is made is the royalty ten per cent. more. (See our main brief, pp. 291–292.)

The statement with respect to the clicking machine is also misleading. No direct royalty is charged for this machine when it is used in connection with the United Company's welter, stitcher and lasting machine. Only when it is not so used is a royalty charged. (See *infra*, p. 46.)

Passing over various other inaccuracies, we find on page 180 of the petitioner's brief the following statement:—

> "Apart from losing the rebates and bonuses given by the defendants to obedient manufacturers, a lessee using machines of competitors under the 'independent lease' would not only have to pay the initial premiums but his premiums for pulling over machines would be nearly tripled and his clicking machines would cost him an additional and discriminatory royalty of from one to three cents a pair. On top of all this, he would have to pay ten per cent. extra for any of the defendants' metallic machines which he might have to use."

The "rebates and bonuses" referred to consist of an offer made in 1910 by the United Company to pay to its lessees

of Goodyear machines in stock of the United Company a certain percentage of the royalties received from them on their Goodyear machines provided they "faithfully observed the covenants of their leases." This was not a rebate or bonus in any sense. It was merely a method of reducing the royalty charged on these machines, such reduction being represented in stock instead of by a cash reduction. It applied equally to all lessees. There is absolutely nothing in the record or in fact to suggest that a lessee of the machines under "independent leases" was not equally eligible with the lessee holding machines under restricted leases, or a lessee holding some machines under each of the two ways, to share the benefits. Furthermore, a shoe manufacturer using the United Company's Goodyear machines and a competitor's lasting, heeling, metallic, General Department and pulling-over machines was as fully entitled to this reduction as a manufacturer using all of the United Company's machines. A reading of the offer (P.'s Ex. 146, R. Vol. 5, p. 1067) shows this clearly. (See also our main brief, p. 551.)

The statement "but his premiums for pulling-over machines would be nearly tripled" is absolutely unfounded in fact, and there is not a word in the evidence or in the exhibits which justifies any such statement.

The statement "and his clicking machines would cost him an additional and discriminatory royalty of from one to three cents a pair" is discussed *infra*, page 51.

The brief continues at the bottom of page 180 by assuming a difference of four cents a pair between manufacturing shoes on independent leases and manufacturing shoes on restricted leases and shows a corresponding aggregate amount. The brief might equally well have assumed two

cents and shown half the aggregate amount or eight cents and shown double the amount. In either case it would be of as little value as the assumption made in the brief itself, for it is an assumption contrary to fact and an assumption of fact as a general basis of argument, which would vary constantly and as to which each new case would depend upon a multitude of circumstances.

THE PETITIONER'S MISCONSTRUCTION OF THE EXCLUSIVE USE CLAUSE.

The petitioner's brief lays great stress on the exclusive use cancellation clause and its entire argument is founded upon a misstatement of the clause and its effect.

The brief states:—

(1) That the exclusive use clause forbids the lessee to use machines obtained from others of the kind leased; and

(2) That if the lessee does use such other machines, not only will he violate the lease but the lessor may cancel its leases not only of that particular kind but of machines of all kinds held by him.

Both of these statements are absolutely untrue.

The following quotations from the brief contain the foregoing statements:—

> (p. 161) "The exclusive use clause, for example, obviously limits the freedom of choice of every lessee as to all his future needs for machines of the kind leased and clearly prevents access to him, as a possible customer for any such machines, of all who seek to compete with the defendants as to those machines."
>
> (p. 163) "Without going further, it is apparent that no field of competition is left open except the equipment of entirely new manufacturers and the satis-

faction of new or additional requirements of old manufacturers.

"This latter field however is closed by the exclusive use clause. *Every lease* has that clause or an equivalent. No new demand by an existing lessee of the United Company can be satisfied by a competitor of the defendants without a violation of this clause. The consequences of such a violation need not be repeated. They are the same as those which follow the violation of the full capacity clause. It is enough to say that 'as a practical question' no manufacturer can afford to incur them" (italics theirs).

The brief just previously had stated that upon a violation of the full capacity clause the lessee subjects himself to having all his leases cancelled and all his machinery withdrawn (p. 162). The brief, therefore, clearly states that a violation of the exclusive use clause permits the lessor to cancel the defendants' leases of machines of all kinds.

Before discussing this clause further one word of explanation as to the scope of the clause may be advisable. The exclusive use cancellation clause applies only to the machines of a particular department. Thus as used in a lease of heeling machines the clause permits the lessor to cancel leases of heeling machines held by the lessee if the lessee uses heeling machines obtained from others. It does not permit the lessor to cancel its leases of any other machines, except heeling machines, and it does not permit the lessor to cancel its leases of heeling machines unless machines of the same kind, that is, other heeling machines are used.

The statement in the petitioner's brief that the exclusive use cancellation clause forbids the lessee to use a competitor's machines of the kind leased has no justification. The exclusive use cancellation clause imposes no obligation

whatsoever upon the lessee either to use the United Company's machines or not to use competitor's machines. It merely reserves to the lessor an option to cancel its leases of the machines of a particular department if the lessee wishes to use and does use machines of the same kind obtained from others.

There is all the difference in the world between a clause requiring the lessee to obligate himself to use the United Company's machines of a particular department exclusively and a clause reserving an option to the United Company to withdraw its own machines of that particular department if its machines of that particular kind are not used exclusively.

Under the first provision the lessee is bound absolutely not to use the machines of competitors. Under the second provision no obligation at all is imposed upon the lessee; his right to use the machines of others is recognized; the lessee in no way violates the lease by using such other machines and it is merely provided that the lessor in such case may withdraw its own machines of the same kind if it desires.

The first provision, namely, the provision which the petitioner claims is used, would prevent the use of competitors' machines of the particular kind leased entirely. The second provision, which is the provision actually used, permits the lessee to use competitors' machines as much as he pleases.

The first provision closes the door to competition. The second provision leaves the door open to competitors.

In fact the second provision, namely, the provision actually used, provides a means whereby, if the lessee prefers a competitor's machines of a particular kind, he may be able to escape from any obligation whatsoever to the

United Company in respect to its machines of this kind. As the District Court pointed out (R. Vol. 1, p. 1177):—

> "The cancellation clauses, however, provide a practical means of escape for those who consider the term too long. They may install other machinery and run the chance, and if the machinery so installed is satisfactory they may use it for their full equipment when the machines of the defendants are removed."

The attempt of the petitioner to convey the impression that the exclusive use cancellation clause used by the United Company imposes an obligation on the lessee not to use the machines of others is difficult to understand. Not only does a reading of the clause show its actual effect, but the District Court pointed out the distinction in its opinion, saying (R. Vol. 1, p. 1169):—

> "The legal effect of it [*i.e.*, the exclusive use clause] is merely reservation of a right to cancel the lease in case the lessee should fail or cease to use the defendants' machines exclusively for work of a particular kind. It does not have the legal effect of a contract by the lessee not to use the machines of others. It is merely a limitation imposed by a patentee upon the right to use.
>
> "The reiteration by the United States of the statement that the lessee must use, or is required to use, defendants' machines exclusively is misleading. The distinction between a contract requiring a lessee not to take other machines and a limitation of the right to use the leased machines is very material."

Not only, then, does the exclusive use clause not obligate the lessee to use the United Company's machines of a particular kind exclusively, but it was not inserted in the leases for the purpose of excluding competitors' machines

and there is not the slightest evidence that it has ever been exercised for this purpose.

The right of a lessor to withdraw his own machines because the lessee prefers to use other machines of the same kind is not a right which is adapted to prevent the use of competitors' machines, nor is it a right which could be so exercised as to accomplish that end. By exercising this right the lessor would leave the field open to competitors. A clause which permits the lessor to withdraw its machines is obviously not designed to require that they be used. As the District Court said (R. Vol. 1, p. 1167):—

> "As it is not the purpose of the defendants to take their machines out of factories, but rather to put them in, we must consider those clauses which are designed to induce their installation, rather than those clauses that are designed to prevent a breach of contract, or which reserve a right to terminate the leases upon an infringement of patent rights."

The exclusive use clause was adopted for legitimate business reasons which are fully stated in our main brief (pp. 311–319).

Not only does the exclusive use clause not require that the lessee shall not use a competitor's machines, but if he does use a competitor's machines he is not liable to the consequences stated in the petitioner's brief. When he uses other machines of a certain department, the United Company under the exclusive use clause may withdraw its own machines of that particular kind. It cannot, however, under the exclusive use clause, withdraw machines of any other kind.

Nor can it withdraw its machines of other kinds under the cancellation for breach clause, as the petitioner states.

As the exclusive use clause imposes no obligation upon the lessee, the use by the lessee of other machines does not constitute a violation of any condition or agreement obligatory upon the lessee. The cancellation for breach clause, which permits the cancellation of all leases, can be exercised only where a condition or agreement obligatory upon the lessee has been violated. (See main brief, pp. 329–330.)

PETITIONER'S STATEMENT AS TO CLAUSE REQUIRING PAYMENT OF ROYALTY BASED ON THE TOTAL OUTPUT OF THE LESSEE.

At pages 155–156 the petitioner quotes a clause from one of the United Company's Goodyear leases (P.'s Ex. 24) under which the lessee agrees to pay the lessor for the use of the leased machinery a royalty based on the total number of shoes welted or stitched by machinery whether or not so welted or stitched on the United Company's machines.

The petitioner's brief gives the impression that this clause is a typical clause. We have stated above that it occurs only in certain Goodyear leases and certain pulling-over leases.

The brief designates this clause as a "Royalty Charge on Work not Done on its Machines." It says that if a shoe manufacturer makes 1,000 pairs of shoes of which 500 are sewed on defendants' machines, and 500 on a machine of a competitor, the shoe manufacturer must pay to the defendants royalties both on the 500 pairs made on the defendants' machines and also on the 500 pairs made on the competing machine (p. 156). In other words, it gives the impression that a charge is made by the United Company for shoes sewed on a competitor's machines. This is an unjustified construction.

The charge is made solely for the right to use the United Company's machines. The clause merely provides that where the lessee takes the United Company's Goodyear welter and stitcher without making any initial payment, he shall pay for the use of the patented inventions a price based on his output. A fixed annual payment for the right to use the United Company's Goodyear machines on any shoes the lessee wished to use them on would certainly be beyond criticism. So equally must be this clause which, instead of requiring a fixed payment for such right, requires a payment based on the actual number of shoes on which the lessee is privileged to use the machines. Such a provision is fairer to the lessee than a fixed payment as the amount of royalty depends on the amount of the lessee's business and he is not burdened with a large payment if his business permanently or temporarily falls off.

If the lessee does not wish to be bound by this clause, he can, by paying the same initial payment which was charged all lessees prior to 1905, take a lease of Goodyear machines which does not contain this clause (R. Vol. 1, p. 442, lines 4–12). The petitioner's brief fails to mention this alternative lease.

The District Court said of this clause:—

> "A royalty which has regard both to the capacity of the machines which the lessor furnishes and to the amount of work which the lessee may have to do upon machines embodying the patented inventions, seems beyond reasonable criticism" (R. Vol. 1, p. 1172).

The brief also refers, under this heading, to a provision that if payment of royalty is made in respect to a given pair of shoes under one Goodyear Department lease it need not be duplicated under a second Goodyear Department

lease even though it happens that part of the Goodyear machines used upon that pair of shoes are held under one lease and part under another. This is obviously a provision merely for avoiding duplication of payment.

As to this the brief says (p. 157):—

> "This means that the United Company charges in the first instance for *each* machine what it deems an adequate compensation for *all* the machines of the group described" (italics theirs).

The purpose of the clause, as is amply shown by the record, is simply this: A lessee may have all of his Goodyear Department machines under a single lease instrument or it may so happen that he has taken his machines at different times, and therefore holds various machines of the Goodyear set under different lease instruments. Each royalty lease must, of course, provide properly for its royalty payment. If the lessee has all of the machines which he holds of this set under a single instrument, there is, of course, no complication, but if he holds some of the machines of this set under one lease and others under another and uses machines held under each lease upon the same pair of shoes, there would, in the absence of some such clause, appear to be on the face of the lease an obligation to pay the stipulated royalty twice.

The clause in question is inserted simply to avoid such duplication of payment. It is no more than to say that, if a manufacturer has agreed under two separate agreements to pay a certain sum of money, payment of that sum under one agreement will relieve him from duplicating the same payment under the other agreement.

PETITIONER'S STATEMENT AS TO THE CLICKING MACHINE LEASES.

At pages 157 to 158 of its brief the United States treats of the royalty clause in the clicking machine lease.

It entitles the section under which it treats of this clause "Discriminatory Royalty Charges where Competitors' Machines are used by the Lessee."

It states:—

> ". . . the defendants in many cases make higher demands for compensation where the lessee uses machines of defendants' competitors than where he refrains from such use. . . .
>
> "An example of such a clause is the following, taken from plaintiff's exhibit 44. . . ."

The brief then quotes the royalty provisions in the clicking machine lease.

The clicking machine is treated substantially as an auxiliary machine when used with the United Company's welter, stitcher, and lasting machines. In such case no direct royalty is charged for the machine, but the United Company gets its return indirectly from the royalties received from the use of the welter, stitcher, and lasting machines. The charge for dies used in the machine is not intended to provide an adequate royalty for the use of the machine.

The lease of the clicking machine, however, differs from the lease of the ordinary auxiliary machine in that a lessee is permitted to use it with welters, stitchers, and lasting machines obtained from others. It is provided, however, that if the lessee does use it with such other machines not

obtained from the United Company, he must pay a royalty of 1/2 of a cent net if the machine is used in connection with other lasting machines, 7/8 of a cent net if used with other welt machines on turn shoes, and 3 cents net if used with other welters and stitchers on welt shoes. If these amounts were not charged where the machine is not used with the United Company's welter, stitcher, and lasting machine, the United Company would get no fair return from the use of its clicking machine, either directly on account of the use of the machine, or indirectly from the royalties received from other machines.

The United Company makes no charge for its Goodyear auxiliary machines except a small rental, but restricts their use to use with the Goodyear welter and stitcher, on which it receives a royalty. The petitioner complains because the United Company does not also lease these auxiliary machines for a separate royalty to be used with a competitor's welter and stitcher.

In the clicking machine leases the United Company does just what the petitioner wishes it to do in respect to the Goodyear auxiliaries. It leases the machine without royalty charge where used with its Goodyear welter and stitcher and lasting machines, and if the lessee wishes to use it on shoes operated upon by welters, stitchers, and lasting machines obtained from others he is permitted to do so by paying a separate royalty for the clicking machine. This is the full effect of the clause.

The clicking machine was invented by the United Company and first put out about 1909. (See main brief, p. 575.) It is a very remarkable machine but it is not as yet used by all lessees.

The brief writer says that clauses of this kind are used

"in many cases." This is not true. The clicking machine lease is the only lease put out by the United Company which contains such a clause.

The metallic machine lease (P.'s Ex. 31), which the petitioner's brief (pp. 158–159) also refers to as containing a clause of the same character, is merely an instance of an unrestricted or retail lease. Under this lease no initial payment is charged, but instead ten per cent. more is charged for materials used in the machine, than is charged under the restricted or wholesale lease.

ARGUMENT OF PETITIONER BASED UPON ITS MISCONSTRUCTION OF THE LEASE CLAUSES.

Under the heading "The Effect of the Restrictive Clauses" (at pages 161–166) the writer of the petitioner's brief attempts to show the effect of the clauses upon a shoe manufacturer.

The conclusion reached by the writer is based upon a misconstruction of the various clauses, especially upon a misconstruction of the exclusive use clause and of the restricted use clause.

The writer at page 161 first begins by stating that the various clauses cannot be regarded separately as they have a cumulative effect. As an example of this he gives the following illustration (pp. 161–163):—

If it be assumed, he says, that the full capacity clause standing alone is reasonable and not unduly restrictive, it must be considered in its relation to the other clauses. A lessee having taken a particular machine and agreed to use it to capacity, so far as he has work for it to do, is unable to replace that machine with a competitor's machine; in

other words, having agreed to use this machine he must use it. We admit that this is the intent and purpose of the full capacity clause.

But the writer adds, if he, the lessee, violates this agreement to use the United Company's machine which he has taken he

> "subjects himself to the penalty of cancellation of *all* his leases and the loss of *all* his leased machinery" (italics theirs) (p. 162).

He adds (p. 162),—

> "The practical operation, then, of this clause which to outward seeming is perhaps the most reasonable of all the restrictive clauses is to prevent the displacement by competitors of any of the defendants' machines."

Of course this broad generalization is not true, because, as we have shown, the full capacity clause is employed in respect to less than half of the machines under lease by the United Company (*supra*, p. 12).

But apart from this, the argument of the petitioner apparently is that while it is proper to make the lessee agree to use the leased machine, it is not proper to subject him to a penalty if he violates his agreement.

Can it be seriously contended that the United Company should not have a right to sever its relations with a lessee and withdraw all its machines if such lessee wilfully violates the full capacity clause in one of its leases and thus deprives the United Company of the royalty which it is entitled to on account of such machine?

The brief then proceeds to state that the full capacity clause closes the field of competition except for

> "the equipment of entirely new manufacturers and the satisfaction of new or additional requirements of old manufacturers" (p. 163).

It is somewhat difficult to see just why competitors coming into the field should expect that lessees already holding machines under leases under the terms of which they have agreed to use the leased machines should have a right to violate their leases and discard such leased machinery.

The brief then proceeds (p. 163):—

> "This latter field [that is, the supplying of new manufacturers or additional equipment to existing manufacturers] however is closed by the exclusive use clause. *Every lease* has that clause or an equivalent. No new demand by an existing lessee of the United Company can be satisfied by a competitor of the defendants without a violation of this clause" (italics theirs).

As we have shown above (*supra*, pp. 38–43), the exclusive clause does not forbid a lessee to take machines from a competitor and a lessee does not violate his lease by so doing. It is untrue, therefore, that the exclusive use clause prevents a lessee from obtaining new or additional machines from competitors or even machines to replace the machines of the United Company which he holds.

The brief then proceeds to state that the consequences of violating the exclusive use clause are the same as those which follow a violation of the full capacity clause.

As we have shown (*supra*, p. 40), the exclusive use clause does not constitute an agreement by the lessee, but is merely the reservation of an option to the lessor.

The clause, therefore, is not violated by the lessee when he takes competitors' machines, and the United Company, therefore, in such case acquires no right to cancel all the leases held by the lessee.

The brief writer, having thus, without any foundation in fact, shown to his satisfaction that existing lessees cannot take competitors' machines either to replace their existing machines or for new and additional work, proceeds to endeavor to show that the restricted use clause or, as he terms it, the "prohibitive" or "tying" clause prevents even new shoe manufacturers just entering the field from obtaining any machines from competitors.

The writer says (p. 164) that such a new manufacturer must go to the United Company for his lasting machines. This is not true (see *infra*, pp. 155–157), but even if it were true it does not sustain the writer's conclusion.

The writer then proceeds to state (p. 165) that even if this new manufacturer could obtain lasting machines from others, his payments for pulling-over machines taken from the United Company would be nearly trebled and his payments for clicking machines taken from the United Company would be increased by a "penalty royalty of from one to three cents a pair." As we have stated above, the statement that his pulling-over machine royalty would be nearly trebled is absolutely without foundation. If he desired to use the United Company's clicking machine, his royalty for the use of the clicking machine when used on shoes operated on by a lasting machine not obtained from the United Company would be one-half a cent, not "one to three cents."

The writer then states that this new shoe manufacturer,

having obtained his lasting machines from the United Company, is by reason of the exclusive use clause (p. 165)

> "committed to the defendants for all of his present and future demands for any kind of lasting machine or device."

This is of course not the effect of the exclusive use clause, as we have shown above.

The writer then states (p. 165) that this new shoe manufacturer will not take the independent form of lasting machine lease. As we have shown (*supra*, pp. 22–36), there is no reason why he should not take it.

The writer then states that, having accepted a restricted lease of lasting machines, the lessee cannot use in connection with it a competitor's Goodyear welter, stitcher, pulling-over or metallic machine (p. 166). This, as we have shown (*supra*, pp. 18–19), is true only as to the No. 5 lasting machine. The other lasting machines, which operate on the same kinds of shoes as the No. 5 lasting machines, and which are preferred by some shoe manufacturers, have fewer restrictions.

Even if we accept the conclusion that the writer at this point reaches (which, as we have shown, is not a correct conclusion), it appears that the shoe manufacturer is only restricted to this extent, viz., that if he uses the United Company's lasting machine, it must be used in connection with its Goodyear welter, stitcher, pulling-over and metallic machines. He is free to use in connection with it any other machines obtained from competitors, viz., any Goodyear auxiliaries (of which there are forty-three different kinds), any heeling machines, any McKay sewing machines, any General Department machines (of which there are over one hundred and seventy-two different kinds),

any lacing machines, any button-hole machines, any insole machines, any machines for sewing the uppers of shoes (which constitute nearly one-half the total machines used in a shoe factory) and any other types of machines which he may desire to use.

It is quite evident that most of the different kinds of shoe machinery, he can still take from competitors and use in connection with the United Company's lasting machine. The result, therefore, even on the erroneous assumptions made by the writer hardly seem to justify the following statement with which he winds up this analysis of the effect of the leases (pp. 166–167):—

> " . . . defendants have brought about a situation in which competition with them either as to the existing or the future needs for machinery of existing or future shoe manufacturers has become entirely impossible. The United Company is not merely 'a formidable competitor.' It is absolute monarch of the industry. No competitor can exist unless for its own pleasure or policy it withholds its destroying hand."

Again, at pages 247–248 of the brief, the writer attempts to show that the fact that leases are executed at different times gives them some additional restrictive effect. He says:—

> "All leases made by the United Company run for a period of 17 years. New leases are made from time to time by every shoe manufacturer who deals with the United Company. Each lease is tied to all the earlier leases. It would be hard to imagine a time when a lessee would be free from all such leases in the ordinary course of business. Therefore there is no time when he is at liberty to procure his bottoming, clicking or

> eyeletting machinery where he wills. . . . It may be well said of that system that he who enters it 'leaves all hope behind.'"

The writer then continues as follows:—

> "A system of leases or contracts producing such a situation must be illegal."

Fortunately for the effect of his argument, the writer does not attempt to analyze the situation to which he refers. He is referring, of course, to the effect of the restricted leases. Let us see if there is any truth in his statement.

Let us take the restricted lease of metallic machinery. Under such a lease the machines are restricted to use with the United Company's Goodyear welter and stitcher and lasting machines. (See our main brief, pp. 290–291.) The lessee can only use this machine if he has shoes which have been or are to be operated on by the United Company's Goodyear welter, stitcher, and lasting machines; *i.e.*, if these operations are to be performed and are to be performed by machinery. Assume that the lessee's leases of Goodyear machines and lasting machines expire and he is left with his lease of a metallic machine. Unless he renews his lease of the Goodyear machines and the lasting machines taken from the United Company or obtains new machines of the same kind from the United Company, he will not be entitled to use his metallic machines held by him on restricted lease. He will be under no obligation whatsoever to obtain other Goodyear machines and lasting machines from the United Company.

The fact that his lease of the metallic machines runs longer than his leases of the Goodyear and lasting machines,

therefore, not only does not oblige him to continue to use the United Company's Goodyear and lasting machines, but, unless he voluntarily does renew his leases of those machines, he is actually freed from any obligation to use his metallic machines, since he is not allowed to use them except in connection with these other machines obtained from the United Company.

The effect, then, of his Goodyear and lasting machine leases expiring before his metallic lease expires is, not to oblige him to continue his relations with the United Company, as the United States charges, but, on the contrary, the effect is to relieve him of further liability to use his metallic machines still under lease.

PETITIONER'S ATTEMPT TO PROVE THAT EXORBITANT ROYALTIES ARE CHARGED.

At pages 173 to 175 of the petitioner's brief the writer attempts to show that the royalties charged by the United Company are excessive.

There was no evidence in the record as to the cash value of the machines which the United Company leases and does not sell, nor could there well be as they are patented machines which are unique and which have never been sold in the market.

The writer of the brief, however, finds that under plaintiff's exhibit No. 21, a lease of a No. 5 lasting machine, the lessee is required to pay the lessor $225 if the machine is destroyed by fire. From this he assumes that the machine is worth only $225. Even if $225 would compensate the United Company for the loss of the physical materials in the machine, which does not appear, this would be no

test whatsoever of the value of the machine, which is very valuable because of the patented inventions which it incorporates.

For example, each new model K welter probably saves $800 a year over the previous model. (See main brief, p. 510.) The previous model was the best machine in the market. To assume, as the writer of the brief does, that such a machine may be worth only the cost of its physical materials is on its face absurd.

The pulling-over machine cost $1,000,000 to develop before it was made a commercial success. (See main brief, p. 574.) The cost of this development must be added to the price of the machines in order to enable the United Company to get back even its expenses.

In spite of this, however, the brief writer assumes that the cost of all machines is doubtless $225 apiece (p. 175). He then takes a small factory making the character of shoe which uses the greatest number of defendants' machines and which returns to the defendants its greatest royalty returns (though the brief does not point this out) and states that for the size and character of factory assumed there would be leased "nine principal machines." He omits auxiliary machines and says nothing about the use of patented inventions or service in caring for the machines. He then proceeds to say with reference to the nine machines (p. 175):—

> "Assuming their value to average $225, the defendants have here an investment of $2025."

What could be more absurd than an assumption based upon premises such as these addressed to this court? Yet the brief continues, based upon these premises:—

> "They receive *annually* a return of over 120 per cent. on this investment" (italics theirs);

and then, apparently realizing the absurd nature of the illustration, continues:—

> "This calculation omits both the auxiliary machines, whose value ranges from a small figure to a large one, and the rentals paid by the manufacturers for them";

and having thus built up a situation to his liking, the brief writer continues:—

> "No self-respecting business man would enter into stipulations so offensive and destructive of his liberty unless he was coerced by the circumstances surrounding him."

PETITIONER'S CHARGES OF UNFAIR CONDUCT TOWARD LESSEES.

Under the title "Punitive Action Against Disobedient Lessees" at pages 188 to 198 of the brief, the United States refers to certain transactions which it claims show that the defendants attempted to enforce the restrictive provisions of their leases so as to compel shoe manufacturers to deal with them.

The brief writer relies upon partial statements in an attempt to support his charge.

We have not space to comment on all of these various transactions, but respectfully refer the Court to the finding of the District Court which completely exonerated the defendants, and to the statements in respect to these transactions at pages 88 to 131 of the appendix to our brief, and pages 543-552 of the main brief, where these transactions are taken up together with other alleged

unfair acts specified in the petitioner's bill of particulars.

To show the extent to which the petitioner in treating of these transactions has disregarded all statements favorable to the defendant sand thereby given a wholly false impression, we shall consider briefly the case of *Kimball & Hadley*.

At page 198 of the petitioner's brief the writer refers to this transaction as follows:—

> "Kimball & Hadley, of Lynn, Mass., were making needles and awls. Beginning about January, 1904, they found that they could not sell Universal Slugging Machine awls. Five firms told Hadley personally that the reason they would not purchase was that the use of their needles and awls was in violation of the lease of the United Company; and if they continued to use their needles and awls, the United Company would take its machines away from them" (Hadley, R. Vol. 1, p. 308, line 11).

It is true that Hadley did testify that he could sell no awls and few needles to the factories of the E. E. Taylor, G. D. Barry & Company, Churchill & Alden, and Rice & Hutchins (R. Vol. 1, p. 308, lines 28–31), and that he testified that these concerns stated orally that the use of his needles and awls was in violation of the terms or condition of their leases and if the manufacturers continued to use his awls and needles the United Company would take their machines out of the factories. The defendants' evidence showed, however, that this statement was self-evidently false.

In the first place, all the leases of the United Company have been introduced in evidence and there is not a single lease which requires the lessee to purchase awls and needles

from the United Company. Therefore, on its face it could hardly be true that these concerns made this statement, or that Hadley, who was acquainted with the shoe trade, credited the statement.

In the second place, representatives of these concerns were called as witnesses and absolutely denied making any such statements to Hadley.

In the third place, it appeared that Hadley had sold out his business of making Goodyear needles and awls to the United Company. At the time of the purchase the United Company was not making any Goodyear needles. The purchase price was $4,750. As part of the transaction Hadley covenanted not to engage in the business for fifteen years. He broke this covenant and in a suit brought by the United Company against him to enforce its rights the covenant was held valid and Hadley was enjoined from engaging in the business during the term of the covenant. (*United Shoe Machinery Company* v. *Hadley*, 193 Mass. 351.) The record shows beyond question that Hadley, on account of this litigation, was prejudiced and biased and determined to injure the United Company if he could and that his statements were wholly unreliable. (See Appendix, pp. 111–113; pp. 54–55.)

PETITIONER'S REFERENCE TO OTHER CLAUSES IN THE LEASES WHICH IT IS NOT EXPRESSLY CONTENDED BY THE PETITIONER ARE ILLEGAL.

At pages 146 to 147 of the petitioner's brief the writer refers to certain other clauses in the leases. The purpose apparently is to show either that these clauses are also oppressive, and, therefore, to show the oppressive character in general of the leases, or to insinuate that because these

clauses are in the leases the other clauses objected to by the petitioner as illegal are unnecessary.

The first clause considered is the minimum payment clause.

The brief states (p. 146):—

> "These leases . . . contain every ordinary provision to protect the interests of a lessor. Among these is a clause *which appears in every lease* requiring the payment of a fixed minimum royalty" (italics ours).

And again (p. 147):—

> "And whether the machine is put out on a rental or a royalty basis he [the lessee] is obligated to guarantee a minimum monthly return."

The slightest study of the leases set forth in the exhibits shows that this general statement is not warranted by the facts. Of the forty-nine leases set forth as exhibits a minimum guarantee clause in some form occurs in thirty-one leases. It does not occur at all in eighteen leases. Even in those cases where it does occur it is, in practically every instance, accompanied by a qualification (to which the brief makes no reference) that such minimum guarantee does not apply in respect to any month in which the factory of the lessee is idle.

Such minimum guarantee clause is not used in general in respect to machines installed under leases which require an initial payment. It does not occur in the leases of General Department machines under which 170 different types of machine are supplied. It does not occur in respect to auxiliary machines of the Goodyear Department. It does not occur in respect to clicking machines. It does not occur in respect to eyeletting machines. Defendants'

Exhibit 226, R. Vol. 5, page 424, shows the total number of defendants' leased machines outstanding March 1, 1913, as 98,516. Of these machines more than 73,000 were Goodyear auxiliaries, General Department, eyeletting machines, etc., the leases of which as appear from the Exhibits contain no minimum royalty. 744 were lasting machines whose leases contain no minimum royalty. And as appears from the record, any of the 5,586 Goodyear machines, 3,782 Consolidated lasting machines, 3,716 No. 5 lasting machines, might have been taken on forms of lease which do not contain a minimum royalty clause.

The purpose of the writer in referring to this minimum payment clause apparently is to show that, since the leases contain this clause, no other provisions are needed to protect the United Company in respect to the amount of return it receives, such as the full capacity clause and the exclusive use cancellation clause.

We have shown in our main brief (p. 310) the unsoundness of this contention. If the minimum clause provided for a fair return, it would necessarily be equivalent to a fair rental for the machine; but one of the virtues of the lease system is that the lessee is not required to pay except according to use. The minimum clause in the present leases originated many years ago. It has no relation to a reasonable return on the machines, and, as Mr. Winslow testified, it has never been enforced except for the purpose of making a manufacturer return surplus machines not required by him. (Main brief, pp. 310–311.)

The brief then states (p. 147):—

"The machine is held at the sole risk of the lessee."

And again (p. 147):—

> "If the machinery be destroyed by fire, he [the lessee] must pay for it a sum fixed in the lease."

This is not true as a general statement in the form in which it is made. This provision does not occur in the leases of General Department machines or in general in those leases where the lessee makes an initial payment at the time of the installation of the machines.

In other words, this clause is inserted only in those leases when the machines are installed without any initial payment on the part of the lessee. In such a case if the machine were destroyed by fire, especially if it were destroyed shortly after it was installed, the United Company would get no payment at all for its machine.

The brief continues (p. 147):—

> "Plaintiff's Exhibit 21 (R. III, 182) is in these and other respects a fair sample of the defendants' leases."

It is to be noted that the lease selected as the "fair sample" is one of the two alternative forms of lease for a new type of lasting machine not adopted or put out by the United Company until the year 1908, nine years after the formation of the Company. The alternative form of lease for this very machine, which appears as Plaintiff's Exhibit 22 (R. Vol. 3, p. 193), does not contain either the fixed minimum royalty clause or the sole risk clause or the agreement to pay if the machine is destroyed by fire, which the brief sets forth as contained in every lease, nor any restrictive lease clause, and the Exhibit 21 which the brief sets out as a "fair sample" of the defendants' leases differs from any other lease put out by the defendants (including various

other leases for lasting machines) in that it includes clauses not contained in many of the other leases, and also differs in respect to the scope of the so-called tying clause from such clauses in other restricted leases where they occur to which the Brief of the United States subsequently refers.

Again, at page 172 under the title of "Other Oppressive Provisions of Defendants' Leases" the brief writer refers to the following clauses as "extremely burdensome."

The first clause is a clause forbidding the lessee, without permission from the lessor, to remove a machine from one of his factories.

The machines belong to the United Company. It naturally must know where they are located so that it can see if they are properly cared for and so that, in respect to the machines on which a royalty based on use is paid, it can examine the machines to see if proper payments are being made. The provision that the United Company's own machines shall not be removed from the factories in which they are installed without its permission can hardly be called burdensome without a stretch of the imagination.

The next clause considered by the writer is the clause permitting the lessor at all times to have access to the leased machinery (p. 172),—

> "for the purpose of inspecting it or watching its use and operation, or of altering, repairing, improving, or adding to it, or determining the nature or extent of its use."

Obviously the United Company must have a right to look at the machinery in order to see if it is properly cared for and to see to what extent it is used so that it may be sure it has been paid its proper royalties. The brief

writer construes this into a right on the part of the United Company to

> "enter the factory of the lessee at any time they please, and put themselves in a position to learn any manufacturing secret the lessee may have."

The brief then proceeds to say (p. 173):—

> "Further, he [the lessee] is required 'at his own expense' to keep the machinery 'in good and efficient working order,' although the machinery belongs to the lessor and the lessee is bound to pay for its use."

Could any argument be more absurd? The petitioner seriously charges that a clause requiring a lessee of machinery to keep it in efficient working order is an improper burden. The writer, of course, omits to state that this work is actually done by the United Company, and that the clause is not enforced. (See main brief, pp. 186–188.)

The writer then refers to the clause requiring the lessee to obtain from the lessor the parts needed for repairs. (See main brief, pp. 298, 301.)

He then refers to a clause requiring the lessee to pay a stated sum in case the machine is destroyed by fire. It is difficult to see how this clause can be burdensome. It may be noted that the clause does not appear in the initial payment leases put out by the United Company which the writer omits to mention.

The writer of the brief then refers to the return charge, which, it is to be noted, occurs in only certain of the leases, and then proceeds to assume a certain cost for the machines and on this assumption to contend that an exorbitant price is charged for the machines. This last contention we have considered *supra*, page 14.

THE RELIEF ASKED FOR BY THE PETITIONER IN RESPECT TO THE LEASES SHOWS THE PETITIONER'S FAILURE TO UNDERSTAND THEIR CHARACTER AND EFFECT.

The petition itself prays that the Court declare the lease and license agreements objected to "illegal and void" (R. Vol. 1, p. 1029), and that the defendants be enjoined from enforcing or attempting to enforce any of the provisions objected to.

In the petitioner's brief the petitioner contends that relief as to the existing leases can be given without making the lessees themselves parties, on the ground that the enforcement of the alleged illegal provisions can be enjoined without depriving the lessees of any rights, and that such action, on the contrary, will only relieve them of burdensome provisions.

On page 259 the brief writer says:—

> "As we have said before, the Government does not attack the leases, but only certain clauses of them. These clauses are, we say, illegal. They impose obligations upon the lessees and are made for the sole benefit of the defendants. The relief sought is a prohibition against the defendants enforcing them. We do not seek in any wise to control the action of the lessees. What we ask would not in the least impinge their rights. Neither would it impose any obligation upon them. On the contrary, it is designed to relieve them from an oppressive and wholly illegal burden."

This statement, we submit, is based upon a wholly erroneous view of the nature and character of the lease provisions.

For example, take the seventeen-year term, which is one of the clauses objected to by the United States. If the United Company is enjoined from enforcing this clause, it means that the United Company cannot compel a lessee to retain its machines for the period of seventeen years, but that the lessee may return them at any time. But if the United Company is so enjoined it must be because the clause is illegal. If so, it clearly follows that the lessee also cannot enforce the clause. The result would be that the United Company could withdraw from its lessees at once all the machines they hold under lease, and either refuse to return them to the lessees or require the lessees to purchase them, or pay large initial payments or fixed rentals. This is not a fanciful suggestion. If the United Company is enjoined from providing for its reasonable protection by means of the clauses it now employs, it would, as we have shown in our main brief (pp. 420–422), be required to sell its machines outright, or charge large initial payments, or fixed royalties, that is, to charge its lessees less favorable terms than at present.

In other words, it is impossible to enjoin the United Company from enforcing this seventeen-year clause except on the ground that it is illegal, and if so, the leases become terminated or terminable at any time at the option of either party. It is therefore clear that the lessees are vitally interested in the decision of this suit and that their rights would be seriously affected if the United Company were enjoined from enforcing the lease provisions, as prayed for by the petitioner.

Again, take the auxiliary restricted use clause. The United Company has thousands of patented Goodyear auxiliary machines on lease. No royalty is charged for the

use of these machines, but they are restricted to use with the Goodyear welter and stitcher and the United Company receives its return indirectly from the royalties received from the welter and stitcher.

But is it possible that the Court could enjoin the United Company from enforcing this restriction, and at the same time hold that the lessee had a right to continue to hold the machines under his lease and use them in connection with any machines he pleased? The result would be that the lessee would continue to hold and use the United Company's machines, without making any royalty payment direct or indirect for them, that is on terms entirely contrary to those agreed upon by the parties.

The auxiliary machines are patented machines. The lease and license agreements under which they are furnished to lessees constitute leases of the physical materials which compose the machines, and also licenses under patents to use the inventions embodied in the machines.

As the United Company owns these patents embodied in the machines, the lessee has no right to use the leased machines unless he holds a license from the United Company to do so. The only license to use the machines which the lessee has is the restricted license contained in the leases authorizing the lessee to use the machines only on certain shoes. The United States contends that this license, that is, the restricted use clause, is unlawful and therefore that its enforcement should be enjoined. But if the license is unlawful, then it necessarily follows that the lessee has no license at all to use the machines. If a patent suit is brought against him by the United Company for an infringement by the use of the machines, the lessee can defend only by

setting up a license, and, of course, it cannot set up an unlawful license.

A patent suit brought by the United Company against the lessee for the use of these machines would not constitute an enforcement of the lease. It would constitute merely an enforcement of the United Company's patents, which give it the right to exclude all other persons from the use of the patented inventions. The United Company in such a suit would not rely upon any agreement by the lessee but solely on its patent, and, as we have stated above, the lessee, if using the machines in connection with a welter or stitcher obtained from some one else, could not set up the license granted by the lease as a defence, first, because such license would not cover the use which he was making of the machines, and second, because such license would necessarily have been held to be illegal if the relief prayed for by the petitioner is granted.

This same result is true in respect to all the other machines leased under restricted leases.

The result is that the restricted use clauses could not be held unlawful, and the United Company enjoined from enforcing them without necessarily depriving the lessees of their right to use at all machines held by them under such restricted licenses.

There is, therefore, no foundation for the statement (p. 259) in the petitioner's brief that:—

> "What we ask would not in the least impinge their [the lessees'] rights."

Again, take the full capacity clause objected to by the petitioner. The machines held under leases containing this clause were leased on an understanding that they

should be used as contemplated by the full capacity clause. If they are not so used, the United Company may get no return, as the royalty is dependent on the use of the machines. This clause goes to the very essence of the contract. If it is held illegal, the whole lease must be illegal, and therefore the lessee can no longer have the right to hold the machines for the term of the lease. To hold otherwise would be to hold that the Court can decree that machines, owned by the United Company, shall be held by a shoe manufacturer on terms not contemplated or agreed to by either party. In other words, it would be to hold that the Court, by its decree, can create a new contract, between the parties which would be totally unfair to one of them, and might deprive it of practically its entire return on its investment.

Consider again the clause contained in some of the Goodyear leases requiring the lessee to pay a royalty for the use of the machines determined by the total output of the lessee. The petitioner strenuously objects to this clause and asks that the United Company be enjoined from enforcing it. This is the only clause in the lease requiring the lessee to pay any royalty to the United Company (except a small minimum payment). This clause goes to the very essence of the contract. If the United Company cannot enforce it, it cannot obtain any compensation for its machines. If it is held illegal, it necessarily follows that the entire lease must be illegal.

APPENDICES "A," "C," AND "D" TO THE PETITIONER'S BRIEF.

Appendix "A" to the petitioner's brief is a chart purporting to show the effect of the exclusive use and "tying" clauses. This chart does not correctly represent the situation, but is inaccurate and misleading. We comment on it in Appendix I to this Supplemental Brief (*infra*, pp. 159–166).

Appendix "C" to petitioner's brief purports to give a synopsis of the lease forms showing the tying clauses contained in each. This also contains ambiguities and various misleading statements. We comment on it in Appendix II to this Supplemental Brief (*infra*, pp. 167–177).

Appendix "D" to the petitioner's brief purports to give a résumé of leases in which the various objectionable clauses appear. We comment on this in Appendix III to this Supplemental Brief (*infra*, pp. 178–179).

REPLY TO THE DISCUSSION IN THE BRIEF FOR THE UNITED STATES OF ALLEGED LASTING MACHINE COMPETITION BETWEEN THE GOODYEAR COMPANY AND THE CONSOLIDATED & McKAY LASTING MACHINE COMPANY.

The Court will find nothing in the Brief for the United States which will raise any question as to the soundness of the findings of the District Court on the facts bearing on this issue. Accordingly, we should not burden the Court with any further discussion of this issue than is contained in the Brief for Appellees (pp. 119–151), were it not for the fact that the Brief for the United States abounds in inaccurate and misleading statements of the evidence, directly at variance with the overwhelming weight of the evidence and frequently at variance with the testimony of the United States' own witnesses, and persistently ignores directly contradictory evidence of defendants' witnesses.

1. PRELIMINARY STATEMENT.

At the very outset the Brief for the United States (p. 18) makes a misstatement which demands immediate correction. It states that "there were on the market, according to Winslow," the Ideal lasting machine and the Copeland rapid lasting machine, both owned by the Goodyear Company. This is to the effect that in 1899 the Goodyear Company was putting out *both* of these machines. *Mr. Winslow made no such statement.* At the point in the record which the United States cites in support of its

statement, he did not even mention the Copeland (R. Vol. 1, p. 399, lines 13–21).

As is explained in the Brief for Appellees (pp. 129–131), the Copeland rapid lasting machine was an old machine formerly put out by the Goodyear Company but which had become out of date with the revolutionary changes in the styles and shapes of lasts about 1895. After that time the Goodyear Company put out the Ideal lasting machine (R. Vol. 1, p. 521, lines 39–40; p. 626, lines 39–43).

This misstatement by the United States is particularly open to criticism in view of the fact that it is introduced (p. 17) by the statement: "*There is no dispute* with reference to the various kinds of lasting machines which were being produced at the time the United Company was formed" (italics ours). Moreover, this misstatement by the United States is inconsistent with its statement (p. 20) that "the Goodyear Company's lasting machine was, as has been said, the Ideal machine, which was a development of its Copeland-Rapid machine."

The United States does not appear to question that, as explained on pages 119–120 of the Brief for Appellees, the following lasting machines being put out by the Consolidated Company in 1899, viz.: the McKay & Copeland, the Chase, and the hand method McKay, were each designed and chiefly used for a particular kind of work, each different from the other; and that the Ideal machine of the Goodyear Company was also designed and chiefly used for still another and distinctly different kind of work.

The United States contends:—

(1) That the experimental hand method welt lasting machine of the Consolidated Company competed with the

Ideal machine of the Goodyear Company in the field of the Ideal, that is, in lasting *women's welt shoes.*

(2) That the Ideal machine of the Goodyear Company competed with the hand method McKay machine of the Consolidated Company in the field of the hand method McKay, that is, in lasting *McKay sewed shoes.* This is a new contention.

(3) That the Ideal machine of the Goodyear Company competed with the Chase machine of the Consolidated Company in the field of the Chase, that is, in lasting *men's welt shoes.*

(4) That the Chase machine of the Consolidated Company competed with the Ideal machine of the Goodyear Company in the field of the Ideal machine, that is, in lasting *women's welt shoes.*

2. THE CONTENTION OF THE UNITED STATES THAT THE EXPERIMENTAL HAND METHOD WELT LASTING MACHINE OF THE CONSOLIDATED COMPANY COMPETED WITH THE IDEAL MACHINE OF THE GOODYEAR COMPANY IN THE FIELD OF THE IDEAL, IN LASTING WOMEN'S WELT SHOES.

The Brief for the United States contends (p. 19) that the problem of adapting the hand method lasting machine for the lasting of welt shoes was "in the way of solution in the fall of 1898"; and that in December, 1898, the Consolidated Company was "offering to the trade the hand method machine as a satisfactory machine for the lasting of welt shoes."

The evidence which the United States relies upon in support of this contention is, first, Mr. Winslow's testimony that, as it is stated by the United States (p. 19), "some

machines were already in shoe factories," that "it was the intention of the Consolidated & McKay Company to perfect the machine so as to make it an efficient welt lasting machine," that it became successful *in 1900*, and that *now* women's welt shoes are lasted very largely upon this machine.

It is upon these statements by Mr. Winslow that the United States bases its assertion (p. 19) that the Consolidated Company "was putting out lasting machines which covered the entire ground." But the United States ignores Mr. Winslow's testimony that

> ". . . while it is true that we had machines out it is true that they were not being accepted by the manufacturers and they were being sent out and coming back. We were trying all the time to keep them going. . . . We were trying to hold them in the field, but *we knew that they were not commercially successful*" (italics ours) (R. Vol. 1, p. 978, lines 2–5, 11–13).

Mr. Winslow's testimony was emphatically corroborated by Mr. Howard (R. Vol. 1, p. 969, lines 4–6).

The practical reasons why the experimental hand method welt lasting machine was not successful until a new invention was incorporated in it in 1900 are fully explained in the Brief for Appellees (pp. 140–144).

The United States further relies (pp. 19, 32) upon advertisements published by the Consolidated Company in December, 1898. But the United States goes too far; it asserts (p. 32) that the advertisements "*claimed the machine would last welt shoes without distinction*" (italics ours), and obviously aims to give the impression that the advertisements claimed that the machine would last any and

all kinds of welt shoes, necessarily including women's welt shoes. This is not justified by the record, which merely states that the advertisements advertised "the Consolidated hand-method lasting machine for lasting welt shoes" (R. Vol. 1, p. 960, lines 27–28). But apart from this the advertisements merely show an attempt by the Consolidated Company to introduce the machine and in no way refute the testimony discussed in the Brief for Appellees (pp. 140–144) proving conclusively that this attempt had failed and that the machine was not commercially successful. Accordingly, there is no warrant for the argument of the United States (p. 33) that "these contemporaneous advertisements should overcome anything which Mr. Winslow and his witnesses said in this law suit, twelve years afterwards." This contention is obviously absurd.

The United States also attempts to support its contention that prior to 1899 the experimental hand method welt lasting machine was offering competition in the field of the Ideal lasting machine, in lasting women's welt shoes, by the testimony of Selz, Welch, Strootman, and Eaton (pp. 28–29). None of these witnesses testified to any use of the hand method welt lasting machine on *women's welt shoes* prior to 1899, and only one, Eaton, testified to *any use* of that machine on any kind of shoes prior to 1899.

Selz's testimony does not bear on the issue. In the summary of his testimony in the Brief for the United States (p. 28) women's *welt* shoes are not even mentioned.

Welch's testimony does not bear upon the issue of lasting machine competition in 1899, despite the attempt of the United States (pp. 28–29) to give the impression that it does (see first paragraph, p. 29). Welch did not

manufacture welt shoes until "along *in 1906*," *seven years after the United Company was formed* (italics ours), and prior to that time had manufactured McKay shoes exclusively (R. Vol. 1, p. 711, lines 19–20, 34).

Strootman did not testify, and the Brief for the United States does not claim (p. 29), either that he was making women's welt shoes prior to 1899 or that he used the Consolidated hand method lasting machine prior to 1899. Accordingly his testimony is irrelevant to this issue.

On the face of the résumé of Eaton's testimony in the Brief for the United States (p. 29), his testimony does not relate to this issue because, as the United States says, before 1899 "he was making men's welt shoes exclusively."

The United States has not called attention to any testimony whatever which could lead this Court to doubt the correctness of the finding of the District Court; on the contrary, it appears that all the testimony was consistent with that finding, which was as follows:—

> "With still another laster [the hand method welt machine] with which the Consolidated Company was experimenting in 1899 for use on welt shoes, we are not here concerned, because, though this laster was afterward further improved, developed, and finally furnished to users by the United Company, it had not been made an article of commerce in any practical sense when that company was formed" (Dodge, J., R. Vol. 1, p. 1130).

3. THE CONTENTION OF THE UNITED STATES THAT THE IDEAL MACHINE OF THE GOODYEAR COMPANY COMPETED WITH THE HAND METHOD MCKAY MACHINE OF THE CONSOLIDATED COMPANY IN THE FIELD OF THE HAND METHOD MCKAY, IN LASTING MCKAY SEWED SHOES.

For the first time since this suit was begun the contention is made by the United States (p. 20) that the Ideal machine was used in the field of the hand method McKay machine in lasting McKay sewed shoes.

In support of that contention the United States relies upon the testimony of only one witness, Mr. Howe. But the United States does not correctly state Mr. Howe's testimony. It says (p. 20) that Mr. Howe testified that "it would frequently happen that McKay shoes would be lasted upon the Ideal machine." What Mr. Howe actually said was:—

> "It would happen sometimes in a shoe factory whose principal work was the manufacture of women's welts that the concern might be making a few McKay sewed shoes, but not enough to have an appropriate lasting machine for them. In that case frequently *they would strain a point* and last their McKay shoes on an Ideal laster, *for which it really was not adapted*" (italics ours) (R. Vol. 1, p. 627, lines 25–31).

So far from being an admission on Mr. Howe's part of competitive use of the Ideal lasting machine in the field of the hand method McKay lasting machine, this testimony merely reinforces the fact abundantly established by the record that uses of the lasting machines outside of their own fields were exceptional and sporadic and in spite of structural inadaptability.

This feeble contention obviously requires no further discussion.

4. THE CONTENTION OF THE UNITED STATES THAT THE IDEAL MACHINE OF THE GOODYEAR COMPANY WAS COMPETING WITH THE CHASE MACHINE OF THE CONSOLIDATED COMPANY IN THE FIELD OF THE CHASE, IN LASTING MEN'S WELT SHOES.

A. Much of the Evidence Relied upon by the United States to show Use of the Ideal Machine on Men's Welt Shoes does not Relate to Use of the Ideal at all but Relates to the Copeland Rapid Laster, a Radically Different Machine which was Practically Obsolete in 1899.

Much of the testimony which is discussed by the United States and which is relied upon to show use of the Ideal machine on men's welt shoes does not relate to the Ideal lasting machine at all, but has to do with the Copeland rapid laster.

In order to justify its reliance upon testimony relating only to the Copeland machine the United States first undertakes to show that the Copeland and Ideal machines were substantially identical (pp. 18, 21). It characterizes the Copeland machine as "the same machine as the Ideal machine except that it was operated by the foot of the workman rather than by power" (p. 21).

But it is shown conclusively by the testimony of both witnesses for the United States and defendants' witnesses (see Brief for Appellees, pp. 129–131), which the United States ignores, that the Copeland machine was *radically different* from the Ideal and was *practically obsolete* in 1899.

Accordingly the testimony of Florsheim and McElroy (Brief for the United States, p. 21), which relates only to

the Copeland rapid laster and does not mention the Ideal machine, is irrelevant.

Likewise, so much of the testimony of Worsencroft (pp. 22–23) and Jordan (p. 25) as relates to the Rapid machine should be disregarded.

B. Evidence as to Alleged Use of the Ideal Machine on Men's Welt Shoes after 1899, largely relied upon in the Brief for the United States, is not Relevant to this Issue.

In reviewing the evidence as to the use of the Ideal machine in the manufacture of men's welt shoes the Brief for the United States fails to distinguish between use *before 1899* and use *after 1899*. As is shown in the Brief for Appellees (pp. 132–136), the slightly increased use of the Ideal machine on men's welt shoes *after 1899* was due to the introduction of a new shape of last and to inventions which made it possible for the Ideal machine to last men's welt shoes made on that last (and see *infra*, pp. 80–82).

It cannot be assumed that defendants in February, 1899, could anticipate either that change in the styles of shoes or the making of those inventions.

Accordingly, a considerable amount of the testimony which is relied upon in the Brief for the United States is irrelevant. For example, Snow (p. 22) testified *entirely* to conditions *after 1899* (R. Vol. 1, p. 896, lines 21–23). The testimony of O'Keefe (p. 26) in regard to use of the Ideal machine related only to conditions *after 1899*. The testimony of Jordan referred to by the United States (p. 25) regarding use of the Ideal in the Douglas and Keith factories related only to conditions *after 1899*. The record does not show whether Murphy was testifying about conditions before or after 1899, so that his testimony (p. 26) has no

probative value. The greater part of the testimony of Heffernan (p. 24) related to use of the Ideal machine *after 1899;* so did much of the testimony of Fletcher (p. 27).

Selz did not testify to any *use* of the Ideal machine. The testimony relied upon by the United States (p. 28) was a mere expression of opinion and the value of that opinion may be judged from the fact that Selz made the ridiculous statement that the machines which he had mentioned—and he had included the *McKay-Copeland* machine, admittedly used only on heavy, nailed shoes such as brogans—could *all* be used in lasting *women's shoes* (R. Vol. 1, p. 142, lines 10–18).

C. The Attempt of the United States to Minimize the Importance of the Improvements which were Made in the Ideal Machine after 1899.

On pages 132–136 of Brief for Appellees, testimony is reviewed which shows that inventions were made *after 1899* which improved the mode of operation of the Ideal machine, although not overcoming the structural defects which made it unadapted for men's welt shoes. The Brief for the United States endeavors to minimize the value of one of those improvements, the "hold-down attachment."

In its summary of Snow's testimony (p. 22) the United States endeavors to give the impression that he testified that the Ideal machine, even before he invented the hold-down attachment, was successful for lasting men's shoes except "men's *heavy* boots, meaning long-legged boots, brogans, and miners' shoes" (italics theirs), and also that after he invented the hold-down it was successful "even for men's *heavy* boots" (italics theirs). On the contrary, Snow testified that "*nothing* could handle those shoes

except the McKay-Copeland machines" (italics ours) and said that before he made his invention the Ideal would not successfully last *even patent leather shoes* (R. Vol. 1, p. 899, lines 38–42; p. 900, lines 17–18). That the statement of Snow's testimony by the United States is entirely unfair is further shown by the quotations from his testimony on pages 129, 133, 135 of the Brief for Appellees. Snow testified that it was the two improvements which he made, one of which was the hold-down, "that changed the machine from an unsuccessful machine into a successful one," and that without those improvements the Ideal would not last men's shoes successfully even if the operation were repeated two or three times (R. Vol. 1, p. 898, lines 35–40; p. 899, lines 38–42; p. 900, lines 12–13).

The United States further endeavors to give a wrong impression in its statement that Snow testified that "the Ideal machines were used *without* the attachment for making the shoes made by the Douglas and Keith Companies" (italics theirs) (p. 22). As to the Douglas factory it is true that Snow testified that during the time he was there and before he put on the hold-downs "the Ideal machines were being used constantly in lasting men's welt shoes"; but he *also* testified that after he went to the Douglas factory:—

> "I put them on as quickly as I could get them on. I don't suppose it was 6 months before I put them on" (R. Vol. 1, p. 900, lines 2–7).

As to the Keith factory Snow testified that he knew nothing about how long Keith had been lasting men's welt shoes on Ideal machines before he went there, that he was there from the spring of 1901 to the spring of 1902, and that while he was there he invented the hold-down and put hold-downs

on all of Keith's machines (R. Vol. 1, p. 896, line 23; p. 897, lines 11–13; p. 899, lines 16–18).

In its discussion of the testimony of Heffernan the United States endeavors to give the impression that Heffernan lasted men's welt shoes successfully for twelve years upon the Ideal machine without any hold-down appliance, but testimony of Heffernan to which the United States does not refer, but which is reviewed on pp. 134–135 of Brief for Appellees, shows that before the hold-down was applied the work of the machine was not satisfactory and that his use of it could not be regarded as successful use.

D. The Use of the Ideal Machine in the Field of the Chase before 1899, on the Showing Made by the United States, was Absolutely Trivial and Insignificant.

The contention of the United States that the Ideal machine of the Goodyear Company was used on men's welt shoes *before 1899* in competition with the Chase machine of the Consolidated Company is supported by the testimony of only five witnesses, showing such use in only three factories. These witnesses were Worsencroft (p. 22), Whitman (p. 23), Heffernan (p. 24), Jordan (p. 25), and Fletcher (p. 27), and the testimony of Whitman, Heffernan, and Jordan, so far as they testified to use before 1899, related to one factory only, the Whitman & Keith factory. The aggregate number of machines, to the use of which these witnesses testified, is eighteen at the most. The Brief for the United States would give the impression (p. 27) that Fletcher said that Cushman had twelve machines before 1899, but he did not so testify (R. Vol. 1, p.

938, lines 28–29, 32–33). Cushman in fact had only six before 1899 (R. Vol. 1, p. 972, line 12).

It is shown by evidence referred to on page 136 of the Brief for Appellees that the total number of lasting machines of all kinds out on January 1, 1899, was between 4,200 and 4,300. The Goodyear Company had put out only 248 Ideal lasting machines altogether, and of that number eighteen at the most, on the United States' own showing, were doing work which could be done by any machine which the Consolidated Company was putting out. That is certainly a meager showing in support of the contention of the United States that the Goodyear Company was competing with the Consolidated Company, particularly in view of the fact that the Goodyear Company had been putting out the Ideal machine for nearly four years. Clearly this trivial overlapping use of the Ideal machine was entirely insignificant and of no importance.

That the Ideal machine also did not offer any potential competition to the Chase machine is proved by the testimony reviewed in the Brief for Appellees (pp. 128–129), where it is shown that the Ideal machine was structurally not adapted for lasting men's shoes.

5. THE CONTENTION OF THE UNITED STATES THAT THE CHASE MACHINE OF THE CONSOLIDATED COMPANY COMPETED WITH THE IDEAL MACHINE OF THE GOODYEAR COMPANY IN THE FIELD OF THE IDEAL MACHINE, THAT IS, IN LASTING WOMEN'S WELT SHOES.

In its efforts to show that the Chase and the Ideal machines competed, the United States apparently contends that the Chase machine was also used in the field of the Ideal for lasting women's welt shoes. But there is no evidence whatever that the Chase machine was ever used in a single instance for lasting women's welt shoes. None of the four witnesses relied upon by the United States, O'Keefe (p. 26), Lemay (p. 27), Springer (p. 27), and Selz (p. 28), testified to any such use, and only two of them, Lemay and Springer, expressed so much as an opinion that the Chase machine could be so used, as is shown on pages 124–125 of the Brief for Appellees.

As to the statement by the United States (p. 26) that O'Keefe said that "the Chase could last successfully *any kind* of shoes except the high toed models which had come into vogue the last three or four years" (italics theirs), O'Keefe did not so testify. He said:—

> "It was just as good as *any other kind of machine* I know of for *regular work*" (italics ours).

The context shows that he meant regular *men's work* (R. Vol. 1, p. 934, lines 41–44).

Selz's testimony does not even mention women's welt shoes, nor does the Brief for the United States in its summary of his testimony. His testimony is therefore irrelevant to this issue.

But not only does the record fail to show that the Chase machine was ever used in competition with the Ideal, in lasting women's welt shoes, but evidence entirely uncontradicted proves, first, that it was never used in lasting women's welt shoes and, second, that it was structurally not adapted for such use. This evidence is reviewed in the Brief for Appellees (pp. 125–126).

The United States relies (p. 33) upon an advertisement of the Chase machine "advertising that machine for the purpose of lasting women's shoes" (R. Vol. 1, p. 960, lines 28–31). But it should be noted that the advertisement did not purport to offer the Chase machine for lasting women's *welt* shoes. Presumably the advertisement had reference to women's McKay shoes on which the record shows a slight use of the Chase machine (Brief for Appellees, pp. 124–125). That use, however, was in the field of the hand method McKay machine of the Consolidated Company and evidence regarding it is not relevant to any issue in this case. But if it be assumed that the advertisement intended to offer the machine for women's welt shoes, it merely shows an attempt to introduce the machine in that field and the complete failure of the attempt confirms the defendants' testimony that the machine was structurally unfitted for such use.

6. THE UNITED STATES HAS CALLED ATTENTION TO NO EVIDENCE WHICH IS INCONSISTENT WITH THE FINDING OF THE DISTRICT COURT AS TO THE ALLEGED COMPETITION BETWEEN THE IDEAL AND CHASE MACHINES.

The District Court, whose discussion of the evidence on this issue is quoted in the Brief for Appellees (p. 139), held, after summarizing the evidence:—

> "I am unable to consider it established that competition in any practical sense was destroyed when the United Company became owner of both machines" (Dodge, J., R. Vol. 1, p. 1130).

So far from establishing that the finding by the District Court is manifestly wrong, the United States has not shown the facts to be otherwise in any respect than was found by the District Court.

REPLY TO ASSERTIONS IN THE BRIEF FOR THE UNITED STATES REGARDING THE ACQUISITION OF THE EPPLER WELT MACHINE COMPANY.

The discussion of the Eppler acquisition in the Brief for the United States (p. 34 *et seq.*) contains serious misstatements of the evidence as well as numerous exaggerated and unfair statements, implications, and half-truths. While the evidence which contradicts those statements has been reviewed in the discussion of the Eppler acquisition in the Brief for Appellees (pp. 152–170), some of the statements made by the United States are so incorrect and misleading that they call for specific answer at this time.

THE CONTENTION OF THE UNITED STATES THAT THE EPPLER COMPANY WAS AN ABLE AND PROSPECTIVELY A VERY DANGEROUS COMPETITOR.

1. The Record does not Support the Claim of the United States that the Difference between the Eppler Welt Shoe and the Goodyear Welt Shoe was a Difference only in Name, and the Record Shows that there was a very Limited Field for the Eppler Welt Machines.

While it is admitted by the United States—as all of the witnesses on both sides testified—that the Eppler machines could not make a Goodyear welt shoe, yet the Brief for the United States gives (p. 34), as the *only* reason, the fact that "'Goodyear welt' was a trade-mark name."

On the contrary, as set forth upon pages 152, 158–159 of Brief for Appellees, the absolutely uncontradicted evidence shows that the difference between the Eppler welt

shoe and the Goodyear welt shoe was not in *name* merely but rather in the actual *structure* of the shoe. As Mr. Howe explained, the Goodyear welt shoe

> "was the hand-sewed shoe, sewed by machinery. The Eppler welt shoe was a shoe made in a different way, different from what a hand workman would make it" (R. Vol. 1, p. 678, lines 25–28).

In the Eppler shoe, the bulky double thread of the inseam lay in a channel in the insole beneath the foot, while in the Goodyear shoe it is laid on the welt outside the surface on which the foot rests.

This bulky double thread in the insole of the Eppler shoe under the bearing surface of the foot had a tendency to raise a ridge on the insole which would cause discomfort to the wearer. This defect in the Eppler shoe, most serious in thinner soles, made it impossible to use the Eppler welt machine for women's welt shoes or for turn shoes. For the same reason the Eppler machines could not be used to make shoes with reinforced insoles, either men's or women's; and about forty per cent. of all welt shoes are made with reinforced insoles (R. Vol. 1, p. 415, lines 41–43; Vol. 2, p. 2494).

On this evidence, entirely ignored in the Brief for the United States, it was found by the District Court that

> "The Eppler machines were adapted to produce men's thick-soled welt shoes only" (Dodge, J., R. Vol. 1, p. 1131).

Accordingly the statement in the Brief for the United States (p. 34) "that there was open to the Eppler Company *a wide field* of possible competition" (italics ours) is contrary to the record. It follows that the statement that

the Eppler Company "was successfully entering that field" (p. 34) is also not supported by the record.

We shall later show (*infra*, pp. 94–95) that the Eppler Company was not successful in the limited field which it was attempting to enter.

2. The Contention of the United States that the Eppler Machines did as Good Work and could be Used for the Same Purposes as the Goodyear Machines.

The testimony of Jones, Selz, McElroy, Florsheim, and Long, witnesses for the United States (four of whom admitted that they were identified with competing shoe machinery concerns), to the effect that the Goodyear and Eppler machines "were used for the same grade of work" (Brief for the United States, pp. 35–40), was contradicted not only by numerous witnesses for the defendants but also by *six witnesses for the United States* whose testimony the United States purports to summarize on the same pages, ignoring, however, testimony of each of those witnesses which is unfavorable to its contention.

Little weight should be given to Long's testimony. His cross-examination (R. Vol. 1, pp. 246–276), including testimony regarding Eppler machines, shows that he was not a credible witness. Reference is made to some of his misstatements on pages 164–165 of Brief for Appellees.

As to the testimony of Smith, a witness for the United States, the Brief for the United States says (p. 36) that he testified that the Eppler machines "could be and were used for the same purposes as the Goodyear welt sewing machine." But Smith *also* testified that he believed that the Goodyear welter was superior to the Eppler because the chain stitch of the Eppler machine was likely to leave

a ridge around the inside of the shoe which would come against the foot and cause discomfort to the wearer (R. Vol. 1, p. 353, lines 4–20).

As to the testimony of Whitman, a witness for the United States, the Brief for the United States says (p. 36) that he testified that the work done by the Eppler welt machine was satisfactory. Mr. Whitman made no such statement. He did say:—

> "I consider the Goodyear welt system the best system; it did better work on the shoe" (R. Vol. 1, p. 916, lines 15–16).

He also testified that his company never had more than one Eppler machine, which they obtained before the United Company was formed and which three or four years later they exchanged for a Goodyear machine (R. Vol. 1, p. 916, lines 11–18).

As to the testimony of Field, a witness for the United States, the Brief for the United States says (p. 37) that Field testified that his company "put in the Eppler machines because they regarded them as the better of the two." But Field also testified:—

> "The Eppler machine sewed a somewhat *looser and weaker seam* than the Goodyear" (italics ours) (R. Vol. 1, p. 931, lines 16–17).

Elsewhere in the record it is clearly shown that a *tight* seam "is indispensable in the inseam of a welt shoe" (R. Vol. 2, p. 2251). The United States also says (p. 37) that Field testified that it was his judgment "that the Eppler machine sewed a flatter seam than the old Goodyear." But this opinion was wrong, as is shown by abundant evidence and specifically by the testimony of Strong, a

witness for the United States, that "you get a flatter seam on the Goodyear welter" (R. Vol. 1, p. 932, line 25).

Other important statements by Field, not referred to by the United States, were that his company had the benefit of the United Company's service, that they had only Eppler welters and used Goodyear stitchers, not Eppler stitchers, and that they had no Eppler auxiliaries. He said:—

> "That is, we had five Eppler welting machines which were assisted and helped out by the Goodyear machines that completed the operation of uniting the sole of a welt shoe to the upper" (R. Vol. 1, p. 931, lines 7–10, 13–14, 23–27, 39–40).

Accordingly Field's testimony relates to *only* the Eppler welter, whereas the proper basis of comparison on this issue is between the Eppler system of machines and the Goodyear system of machines.

As to the testimony of Strong, a witness for the United States, the Brief for the United States says (p. 38) that he testified that "he thinks that the Goodyear welter is a little better than the Eppler welter was" and the United States further states that the United Company's stitcher and welter for which he exchanged his Eppler machines "were developed after the formation of the United Company." Both statements are incorrect. First, Strong did not say "*a little* better" (italics ours). He said:—

> "I think the Goodyear machines do better work than the Eppler machines. Of course, I think the Goodyear welter is better than the Eppler welter was" (R. Vol. 1, p. 932, lines 21–24).

Second, it is not true that machines "for which the exchange was made were developed after the formation of the United

Company" (p. 38). In 1900 the United Company was putting out the same welter and stitcher that the Goodyear Company had been putting out.

As to the testimony of Cunningham, a witness for the United States, the Brief for the United States says (p. 39) that he testified that the Eppler welter was satisfactory, but it does not refer to his statement that he thought "*everything about the Goodyear was better*" (italics ours) (R. Vol. 1, p. 289, line 19). The United States also says that Cunningham testified that the Eppler outsole stitcher "*did not do as good work* as the Goodyear" (italics ours). What Cunningham did say was that the outsole stitcher was *not satisfactory* (R. Vol. 1, p. 290, line 3).

As to the testimony of Fletcher, a witness for the United States, the Brief for the United States says (p. 40) that Fletcher "made no comparison between the Eppler and Goodyear *welter* further than to say that they ran side by side in the same factory" (italics theirs). On the contrary Fletcher testified that

> "with the Eppler machine there was trouble with the loose seam. When you beat out the shoe there would be more or less looseness, which caused a weak seam. It would make a bad shoe" (R. Vol. 1, p. 939, lines 16–19).

As to the testimony of McElroy, a witness for the United States, that the Eppler welter "could have been used on women's shoes" (Brief for the United States, p. 36), the context shows (R. Vol. 1, p. 188) that he meant that it was possible to sew a woman's shoe on the Eppler machine, purely as a mechanical operation, but that he did not mean to express any opinion as to the quality or sala-

bility of the shoe thus sewed. Moreover, McElroy had previously testified:—

> "*Q.* Do you know whether or not it could be used on women's shoes?
>
> "*A.* I do not" (R. Vol. 1, p. 188, lines 2–22).

No other witness even went so far as to express an opinion that the Eppler machine could be used on women's shoes, and for the reasons we have already stated (*supra*, p. 88) it never was used on women's shoes. Furthermore, it appears that the effort to get McElroy to take Eppler machines was unsuccessful (R. Vol. 1, p. 187, lines 33–34).

3. The Contention of the United States that the Eppler Company had a Substantially Complete Line of Auxiliary Machines.

The Brief for the United States says (pp. 38–39) that Mr. Keith, formerly president of the Eppler Company, testified that the Eppler Company "had *a line* of machines for making welt shoes, *except* a rough rounder, and were trying to perfect that" (italics ours). It is plain that the United States intends to give the impression that the Eppler Company had a substantially complete line of auxiliaries, except a rough rounder. Accordingly this statement is absolutely unfair and misleading. Mr. Keith testified that the Eppler Company did *not* have "a full set" and named *only two auxiliaries*, the stitch separator and the rough rounder, stating that the rough rounder was not satisfactory and had never been perfected, and that the stitch separator was not satisfactory (R. Vol. 1, p. 389, lines 19–25; p. 390, lines 37–43; p. 391, lines 39–41).

On the other hand, uncontradicted evidence shows that

the Goodyear Company had thirteen important auxiliary machines for welt work in 1899, including a successful rounding and channeling machine ("rough rounder"). Mr. Warren testified:—

> "The invention of the rounding and channeling machine revolutionized the method of attaching the outer sole" (R. Vol. 1, p. 793, lines 23–24).

4. The Feeble Attempt of the United States to Show that the Eppler Company was Successful.

The United States contends (p. 40) that the fact that the Eppler Company had been in business "some seven years before the consolidation" proves that it was successful, and it also states that the Eppler Company was pressing its business and was advertising "up to the moment of its acquisition by the United Company" and (p. 39) that they had five agents in the field.

But all this goes to prove, not that the Eppler Company was successful, but quite the contrary. The fact that, despite the long time that the Eppler Company had been in business and the efforts it had been making to put its machines into factories, it had succeeded in installing only between thirty and forty welters—of which one-third were in the factory of the president of the company and others in the factories of directors of the company—and a less number of stitchers (R. Vol. 1, p. 288, lines 31 *et seq.;* p. 388, lines 35–39; p. 389, lines 8–11; p. 931, lines 43 *et seq.*), is certainly strong evidence both that the machines were unsatisfactory and that the company's business was not successful. That the Eppler Company had made no money is shown by Mr. Keith's testimony:—

"*Q.* Up to the time of the sale of the Eppler Company to the United Company was the Eppler machine or set of machines commercially successful?

"*A.* Not as a profit maker" (R. Vol. 1, p. 392, lines 9–12).

This evidence also completely answers the arguments of the United States that the Eppler Company offered potential competition (pp. 34–35, 45). Disregarding the bearing upon possible future competition of the facts that the Eppler machines infringed the Goodyear Company's patents and that eight infringement suits had been brought, the evidence that the company after seven years of strenuous efforts had not succeeded in doing more than an insignificant amount of business and had not made any money proves that it did not offer even potential competition. For surely there had been ample time for the development of all the possibilities of competition that existed.

The conclusion is certainly justified that the United States has not shown any ground for questioning the finding of the District Court as to competition, existing or threatened, which was offered by the Eppler Company. That finding was as follows:—

"The evidence leaves me unable to believe that the possible field of competition between the two machines was large enough, or any actual existing competition significant enough in amount to warrant the conclusion that the acquisition by the United Company of both machines involved such destruction of competition as rendered it unlawful" (Dodge, J., R. Vol. 1, p. 1131).

THE ARGUMENT OF THE UNITED STATES AS TO THE PRICE PAID FOR THE EPPLER COMPANY.

Although, as pointed out in the Brief for Appellees (p. 167), the report of the Eppler Company to the Commissioner of Corporations of Massachusetts, which is quoted in part in the Brief for the United States (p. 41), was properly excluded by the District Court, it does not appear that, even if it were admissible as urged by the United States (p. 41), it would support any contention that the United States is now making.

This report was obviously made up in such manner that its assets should balance its capital stock and liabilities. Patent rights are carried at $245,853.61, and its machines placed at a figure sufficient to equalize the total liabilities. It does not in any way disprove the testimony of the President of the company that only between thirty and forty welters were outstanding and a smaller number of stitchers, nor is it any test of what the assets of the company were actually worth if sold, or what the stock of this company, admittedly not a "profit maker," was worth, or what was paid for it by the United Company.

The United States lays much stress upon the fact that the officers of the United Company were unable to state the exact amount paid for the Eppler Company, but, as explained in the Brief for Appellees (p. 166) and as set forth in the record (Vol. 1, p. 32, lines 1–13; p. 33, lines 6–17), the amount paid, whatever it was, came out of a fund provided by a syndicate which was used to pay the expenses of the organization of the United Company and the floating debts of all the old companies, and to purchase the stock of the Eppler Company, the International Eppler

Company and the Goodyear Shoe Machinery Company of Canada, and to make the cash payments on the stock of the Consolidated & McKay Company, besides providing $500,000 as working capital for the United Company. It is not surprising that witnesses could not recall, more than fourteen years later, the exact amount of a particular one of these various items.

While the exact amount paid does not seem material, it should be pointed out that there is no warrant whatever in the record for the statement that the price paid was "in the neighborhood of $600,000" (Brief for the United States, p. 45). There is no justification for assuming that much over $100,000 was paid. But even if as much as $350,000 (p. 43) was paid it cannot be regarded as an exorbitant price and justify an inference of unlawful intent since this purchase (1) enabled the United Company to start free from the most extensive litigation that it had inherited from its constituent companies, (2) made it possible to furnish to its customers machines for making a different kind of welt shoe, should a demand for that kind of shoe continue, and (3) secured for the United Company patents which proved to be of substantial value in the development of new machines when combined with its own patents (Brief for Appellees, pp. 165–166).

ERRONEOUS AND MISLEADING STATEMENTS IN THE BRIEF FOR THE UNITED STATES REGARDING THE PENDING PATENT LITIGATION AGAINST THE EPPLER MACHINES.

In its discussion of the infringement litigation pending between the Goodyear Company and the Eppler Company the Brief for the United States (pp. 43–45) is particularly

inaccurate and unfair. The statement that "of the group of cases brought, only one involved a principal machine" and the statement, after referring to Case 248, that "the other cases related to patent infringements in auxiliary machines," are both contradicted by the quotation from Mr. Howe's testimony on the same page of the Brief for the United States (p. 44). As set forth in the Brief for the Appellees (pp. 154–156) there were pending eight suits for infringement, involving *both* the Eppler principal machines, viz., the welter and the stitcher, and also the Eppler auxiliary machines, viz., rounding and channeling machine, stitch separator and welt beating machine.

The statements by the United States regarding the infringement of the Briggs method patent by the Eppler welter are exceedingly misleading. The proposition (p. 44) that "even the Eppler welter, therefore, was not seriously involved" is based upon the following distorted statement (p. 44) of Mr. Howe's testimony: "He further said that if the Goodyear Company had succeeded in the pending patent litigation it would have compelled alterations in the Eppler machines '*except the welt* sewing machine'" (italics theirs). What Mr. Howe actually said was:—

> "It is my opinion that the infringing devices were very material in the construction of the Eppler Company's machines, except the welt-sewing machine, and that the litigation would have compelled alterations, especially in their stitcher and auxiliary machines" (R. Vol. 1, p. 623, lines 31–35).

It is evident that the United States lost sight of the fact that Mr. Howe was testifying specifically about "the infringing devices"; this testimony obviously has no bearing

at all upon the infringement by the Eppler welter of the Briggs *method* patent, which infringement was not by *devices* but resulted from the operation of the machine. What Mr. Howe had to say about that infringement is as follows:—

> "The Eppler welter infringed the Briggs method patent on an invention *which accomplished the sewing of a tight seam.* That method patent and a machine patent *revolutionized* the Goodyear Company's business about 1890, and *rendered the old Goodyear machines out of date. Everybody wanted the new machine embodying the invention of the Briggs patent*" (italics ours) (R. Vol. 1, p. 678, lines 5–10).

As to the effect of the litigation upon the Eppler Company's business the Brief for the United States says (p. 44): "Had the litigation been wholly successful its result might have affected temporarily the Eppler Company's position as a compe itor of the Goodyear Company (Howe, R. Vol. 1, p. 623, lines 29–38) *although this is admitted to have been speculative* (Howe, *ibid.*)" (italics ours). Mr. Howe did not so testify. But he did say, in the very lines of the record cited by the United States to support the statement just quoted from its brief, that the litigation

> "would have temporarily put the company out of business. It is of course *a matter of speculation whether they could have succeeded in making those alterations* and in getting around such decrees as we were likely to obtain" (italics ours) (R. Vol. 1, p. 623, lines 35–38).

That is, Mr. Howe did not say that it was a matter of speculation whether the litigation would have affected temporarily the Eppler Company's position as a competitor, but he said that it was "a matter of speculation" whether the

Eppler Company *could have succeeded in avoiding infringement by alterations;* and said *without qualification* that the litigation, if successful, "would have temporarily put the company out of business."

In a further attempt to minimize the importance of the litigation against the Eppler machines the Brief for the United States refers (p. 45) to Mr. Howe's testimony that the litigation did not "relate to the fundamental patents," but the United States neglects to mention Mr. Howe's explanation:—

> "I meant by that indirect use of the word 'fundamental' that they were not the first patents that were taken out on that class of machines. I think I explained that the old Goodyear patents had expired long ago. And then we obtained fresh patents on *very valuable improvements*" (italics ours) (R. Vol. 1, p. 686, lines 25–29).

One of these was the Briggs method patent which, as we have pointed out (*supra*, p. 99), "revolutionized the Goodyear Company's business about 1890" (R. Vol. 1, p. 678, lines 7–8).

THE CONTENTION OF THE UNITED STATES THAT THE EPPLER ROYALTY WAS LOWER AND THAT IT WAS RAISED AFTER THE ACQUISITION.

The Brief for the United States says (p. 45) that while the royalty for the Goodyear machines was four cents a pair for men's shoes, "its competitor, the Eppler Company, charged only three cents." On the contrary, of the three executed leases of the Eppler machines which are in evidence, two (P.'s Ex. 59, R. Vol. 3, pp. 507, 509, 510 and Defs.' Ex. 269, R. Vol. 5, pp. 716, 718, 719) provided for a royalty

of *four cents* per pair for men's shoes, while the third lease (Defs.' Ex. 44, R. Vol. 5, p. 54, a lease to the R. H. Long Manufacturing Company), as printed, provided (pp. 56–57) for a royalty of four cents, and the provision for the discount was written into the lease in red ink (R. Vol. 1, p. 250, lines 30–35). In the face of this documentary evidence it certainly cannot be successfully contended that the Eppler royalty was lower than the Goodyear royalty. And the testimony is to the same effect.

Mr. Winslow testified:—

> "The regular rate of royalties charged by the Eppler Company prior to 1899 was four cents net for men's shoes and three cents net for women's shoes. I don't remember the others but they were the same as the Goodyear net royalties. There were *sporadic instances* of special rebates given by the Eppler Company, *but their regular rate was the same as the Goodyear*" (italics ours) (R. Vol. 1, p. 417, lines 29–35).

Mr. Howe confirmed this (R. Vol. 1, p. 470, lines 24-29).

By the statement "the United Company after the consolidation raised the royalty on the Eppler machines to four cents" (p. 46) the United States plainly intends to give the impression that after the acquisition the United Company demanded a four cent royalty from all lessees then using Eppler machines. This is not the fact, as is shown by the testimony of Mr. Winslow which the United States cites in support of its statement (p. 46). Mr. Winslow said:—

> "Where the contract with the lessee was a special rate like that, we endeavored to have him adopt the full rate where we felt that it could be done *without violating any absolute agreement of the Eppler Company.*

> Notably Mr. Keith himself, who was a large manufacturer, voluntarily agreed to that. In fact, he changed over his machines very soon after that. That was to make the rate uniform among all users and *gives no special advantages to anybody*" (italics ours) (R. Vol. 1, p. 417, lines 38–45).

Mr. Winslow had previously testified:—

> "We did not disturb anybody who was using Eppler machines or who had a lease of Eppler machines existing prior to 1899" (R. Vol. 1, p. 417, lines 26–27).

That the United Company did not suppress the Eppler machine but continued to put them out at the regular Eppler royalty of four cents per pair is shown by testimony referred to by the United States (pp. 37, 46).

CONCLUSION AS TO THE EPPLER ACQUISITION.

The Brief for the United States concludes its discussion of the acquisition of the Eppler Company by the statement (p. 48) "there can be no doubt as to the real reason why the Eppler Company was absorbed. It was for the purpose of monopolization."

We submit that for the following reasons the Court cannot find that the Eppler acquisition was for the purpose of monopolization:—

(1) We have called attention in the Brief for Appellees (pp. 81–87) to a long line of decisions, concluding with *Adamson* v. *Gilliland*, U. S. Adv. Ops. 1916, p. 169, establishing "the practical rule" that when in the case of conflicting testimony there is any testimony consistent with the finding of the judge who saw the witnesses that finding "must be treated as unassailable" (*Adamson* v. *Gilliland*,

supra). It is clear that the United States has not referred to any evidence which should lead this Court to question the finding of the District Court, after reviewing the evidence, that

> "The evidence leaves me unable to believe that the possible field of competition between the two machines was large enough, or any actual existing competition significant enough in amount to warrant the conclusion that the acquisition by the United Company of both machines involved such destruction of competition as rendered it unlawful" (Dodge, J., R. Vol. 1, p. 1131).

(2) But, further, as is shown in the discussion of the Eppler acquisition in the Brief for Appellees (pp. 152–170), the record positively establishes that the Eppler shoe was inferior to the Goodyear shoe; that the Eppler machines were decidedly inferior to the Goodyear machines; that the Eppler Company did not have any satisfactory auxiliary machines; that the Eppler Company in seven years had placed an insignificant number of machines and was commercially unsuccessful; and that if there was competition between the Goodyear and Eppler Companies it was wholly negligible and did not make this acquisition inherently unlawful.

(3) The record further establishes that the acquisition was made for normal and legitimate reasons and that there is no feature of the transaction upon which any inference of unlawful purpose or intent to monopolize can be based.

ATTEMPT BY THE UNITED STATES TO SHOW A WRONGFUL PURPOSE AT THE TIME OF THE FORMATION OF THE UNITED COMPANY.

At page 51 the petitioner's brief lays great stress on a statement by Mr. Howe to the effect that he was opposed to the plan of having a harmonious agreement, a sort of working agreement between the Lasting Machine Company (the Consolidated & McKay Company) and the Goodyear Company, "because I had a sort of indefinite idea that it might be deemed to be a combination in restraint of trade" (R. Vol. 1, p. 629, lines 20–24).

The United States attempts to construe this statement into an admission on Mr. Howe's part of unlawful purpose. It is insinuated that Mr. Howe recognized that the combination of the constituent companies "*would suppress competition* and restrain trade" (italics theirs) (petitioner's brief, p. 52), but that he erroneously believed that a combination in corporate form would avoid the penalties of the Sherman Act.

This construction of Mr. Howe's testimony is entirely unjustified. Mr. Howe explained his meaning further, saying:—

> "By my previous reference to something being in restraint of trade I meant that I had an indefinite fear that if the two companies remained separate but, for instance, had a joint factory and joint branch offices, there might be something in the way of restraint of trade. I insisted for that reason that there should be a complete merger and consolidation.

> "No agreements whatever were entered into either between the Goodyear and the Consolidated Companies, or between any of the individuals connected with them, with reference to limiting or restraining their action or activities" (R. Vol. 1, p. 630, lines 3–12).

Mr. Howe at this point in his testimony was referring to an arrangement between the Goodyear and the Consolidated & McKay Companies which it was first proposed should be consolidated. What he obviously meant by his statement was not that he feared that the end sought to be accomplished, namely, the manufacture of the machines of both companies in a single factory and the furnishing of service by a single organization was unlawful or a restraint of trade, but that an agreement between the two companies whereby they agreed and obligated themselves to conduct their businesses in these ways, even though they were entirely lawful ways, might be held unlawful on the ground that it would restrain the two companies from exercising an independent judgment in the future as to the best method of prosecuting their businesses. For example, a company dealing in locomotive wheels and a company dealing in locomotive bodies can lawfully consolidate, but Mr. Howe had a vague idea that there might be some question whether contracts between them, under which they remained separate and yet obligated themselves to act as though consolidated, might not impose restrictions which independent concerns should not incur.

There is no suggestion in Mr. Howe's testimony that he thought the consolidation of the two companies would eliminate competition or restrain commerce. On the contrary, he testified that there was no actual competition between them.

One of the principal purposes for the formation of the United Company was to have the service for the different machines furnished by a single organization and to have the machines manufactured at a single plant and the various parts of the machines standardized. The petitioner might have argued that this could have been accomplished by agreement between the parties without an actual consolidation. Mr. Howe's testimony was obviously merely intended to show one reason why he thought it inadvisable to attempt to accomplish this result by agreement without consolidation.

The attempt to construe this explanation into an admission of wrongful purpose has no foundation in fact.

At page 53 of its brief the petitioner attempts to insinuate that there must have been wrongful purpose in acquring the McKay Company (which was admittedly non-competing) because the United Company paid eleven dollars in par value of its own stock for each share of McKay Company stock which had been selling in the market for eight or nine dollars a share.

The insinuation of unlawful purpose would obviously not be justified even if it were true that stock of the United Company of a par value slightly in excess of the market value of the McKay Company stock were issued for it.

But the truth is that the stock of the McKay Company was worth eleven dollars a share, the price paid for it. There had been few sales of McKay Company stock. The price of the stock had been eight or nine dollars in the market, but it had advanced shortly before the Company was taken in (R. Vol. 1, p. 533, lines 36–38). The McKay stock "was worth more than the market price" (Winslow, R. Vol. 1, p. 534, line 4). The McKay Company "suc-

ceeded in showing that their business and prospects were worth eleven dollars a share, and accordingly the United Company offered them that amount" (Winslow, R. Vol. 1, p. 633, lines 42–44).

At page 59 of its brief the petitioner lays great stress on a recital of an agency contract made with Peabody & Company of Australia, dated September 11, 1899, under which Peabody & Company were appointed brokers or commission agents in Australia for the United Company (P.'s Ex. 189, R. Vol. 4, p. 1250). This contract in its preamble clause recites that the United Company had acquired control of certain companies therein named, and adds that the United Company "contemplates acquiring the control of other lines of boot and shoe and leather working machinery and boot and shoe findings . . . " The contract was signed by George W. Brown, Treasurer of the United Company.

The petitioner's brief says (pp. 59–60):—

> "That contract was signed by George W. Brown, Treasurer of the United Company. And after Winslow had stated that he was in constant communication with Brown about the various matters affecting the company and its policy, he was asked whether Mr. Brown was correct in the recitals just quoted. He answered with a significant evasion."

The insinuation is that this recital shows an intent on the part of the United Company to acquire competing concerns, and that Mr. Winslow was acquainted with the meaning which the person who drafted this clause had in mind, and, being questioned as to its meaning, evaded an answer.

As a matter of fact Mr. Winslow testified that he was

abroad at the time this contract was made and had been abroad for two or three months. He testified on cross-examination in respect to it as follows (R. Vol. 1, p. 536, lines 5–7, 15–24):—

> "I do not know what Mr. Brown referred to by the recitations in the agreement dated September 11, 1899, between the United Company and Henry W. Peabody & Company.
>
> . . . . . .
>
> "I never saw that contract until long afterwards. I think we were negotiating then for one of the eyelet making companies. I could not say whether eyelets were the only line of shoe machinery or findings that the company contemplated acquiring at that time. I was abroad at the time that contract was made and had been abroad for two or three months. I have no doubt that there was some other concern that they were negotiating with then as to which that language perhaps applied, but I knew nothing about the language or the contract until long after it was made."

This is hardly an evasive answer. Furthermore, Mr. Howe, who drew the contract, testified on direct examination as follows (R. Vol. 1, pp. 672–673, lines 21–22, 35–45, 1–13):—

> "I drew the Peabody contract for an agency in Australia, Plaintiff's Exhibit 189.
>
> . . . . . .
>
> "It should be understood that Peabody & Company were commission merchants in shoe machinery and in shoe findings in Australia, and they wanted an assurance that we should give them enough business to warrant their entering into a contract. It was therefore recited herein, what was true, that we had

acquired control of the business of the corporations therein named. Peabody & Company recognized these corporations, or the manufactures in which they were engaged, by their names. We had then in mind the purchase of some other lines of shoe machinery and findings, and this would tend to increase the business of Peabody & Company in Australia.

"*Q.* What other lines had you in mind?

"*A.* I had in mind especially blackings, cements, and stains which Peabody & Company had previously had difficulty in supplying themselves with.

"*Q.* That recital is understood by the United States to mean that you had in mind the acquiring of all shoe machinery and findings and supplies, or substantially all?

"*A.* There was no such intention.

"That paper was not drafted in accordance with directions of the directors or president of the United Company, and that recital was simply my own draft in connection with Mr. Peabody and one or two of our experts or department managers, whom I don't remember."

The acquisition of additional lines of supplies, which was what the United Company had in mind, or of additional machines, which the United Company did not put out, was wholly proper and lawful. It was additional lines of supplies of machines which Peabody & Company were obviously interested in. They desired to know whether the United Company might furnish such additional supplies which, as Mr. Howe testified, they had previously had difficulty in supplying themselves with. They were not interested in knowing whether the United Company contemplated acquiring competing concerns.

The attempt of the petitioner to construe this recital into an admission of an unlawful purpose to acquire competing concerns merely shows the lack of evidence it found to support its contentions.

REPLY TO THE DISCUSSION IN THE BRIEF FOR THE UNITED STATES OF "ACQUISITIONS OTHER THAN THE PLANT PURCHASE."

Under this heading on pages 60–95 the Brief for the United States discusses thirty-six of the fifty-eight so-called "acquisitions." In respect to no one of these thirty-six transactions does the United States make an adequate statement of the facts established by the record. Specifically, it either ignores much important testimony favorable to the defendants or, when any reference is made to that testimony, the United States either omits any mention of testimony unfavorable to its contentions or fails to state it fairly.

At the start the United States misrepresents the general character of these transactions. It states that "the United Company acquired the *shoe machinery business* and assets of fifty-six individuals, partnerships, and corporations . . ." (italics ours) and that "the result of these acquisitions was to remove certain remains of competition. . . ." (Brief for the United States, p. 60).

Both of these statements are contrary to the record.

As has been shown in the Brief for Appellees (pp. 437–443), by nine of the transactions the United Company did not acquire any tangible property or any business of any kind, and by fifteen other transactions the United Company acquired nothing more than supplies of various kinds which are used by shoe manufacturers; so that by twenty-four transactions it did not acquire any shoe machinery at all. And further, eight other concerns, from whom shoe ma-

chinery was acquired, were doing no business whatever; their machines were only experimental and were far from being adapted for commercial use.

The fact is, then, that instead of acquiring the "shoe machinery business" of fifty-six concerns the United Company did not acquire *any shoe machinery business from thirty-two of those concerns.*

As to the statement by the United States (p. 61) that "covenants were exacted from the vendors," where they were inventors, which "required assignment to the United Company of all inventions made during a period of years" and which were "designed to prevent future competition with the United Company," the District Court found that the covenants actually taken were no broader than necessary, and the necessity for covenants of the character actually used is pointed out on pages 466–469 of Brief for Appellees, and the decisions holding that such covenants are normal and lawful are discussed on pages 470–475.

Following its belated admission (p. 61) that "in some cases what was purchased was patent rights and inventions and not machines," the United States says, "A prospective competitor is none the less such because he has only proceeded to the point of acquiring a valid patent under which to pursue competition at the time he is removed from the field by acquisition."

Of course the assumption that the inventor of an improvement in shoe machinery, who may be and often is a shoe operative or mechanic, is a "prospective competitor" is entirely unwarranted. He is no more a "prospective competitor" than many thousands of his fellow-workers.

On pages 62–94 the United States discusses specifically thirty-six of the "acquisitions."

Throughout its discussion of these transactions the United States follows its usual practice of ignoring entirely the evidence unfavorable to its contentions, which shows that every one of the transactions was a normal and reasonable step in the development of the United Company's business. Particularly in cases where the United Company had a machine of the same name as an acquired machine the United States fails to make any reference to testimony showing that the acquired machine was adapted to do a kind of work which no machine of the United Company could do, or that the United Company's machine was only experimental and needed the acquired inventions in order to make it commercially successful, or that the acquired concern had patents which the United Company infringed or which barred the way to needed improvements in its machines. All such testimony is of course essential to a fair presentation of the facts regarding these acquisitions.

In Appendix IV (*infra*, pp. 180–222) will be found comments on the specific statements which the United States has made regarding these thirty-six transactions. Those comments show that the statements by the United States give a wholly erroneous impression. By ignoring testimony unfavorable to its contentions, by stating half-truths or by making positive misstatements the United States has entirely misrepresented the character of these transactions.

In considering these transactions it should be kept in mind that throughout the entire period, during which from time to time these acquisitions were being made, the United Company was engaged in a remarkable development of the art of shoe machinery. It has improved

practically all its machines by embodying new inventions in them. It is now putting out 172 different General Department machines which it has either developed or acquired since its formation in 1899. It has developed 150 entirely new machines, including 39 machines which perform work previously done by hand or not at all. Nearly all of these machines embody more than one patent; many embody a dozen or more patents on different parts of the machine. The inventions of 421 patents are embodied in the 150 entirely new machines which the United Company has developed.

The patents and machines acquired by the acquisitions were used in building up and perfecting this great number of new and improved machines and in improving patented machines which the United Company already had. Many of the so-called acquisitions involved only the purchase of a single patented invention to be used with a number of other patented inventions produced by the United Company in perfecting some one machine. The acquired machines and patents were of insignificant importance compared with the machines developed and the inventions made by the United Company itself.

REPLY TO THE DISCUSSION OF THE PLANT ACQUISITION IN THE BRIEF FOR THE UNITED STATES.

In its discussion of the Plant purchase (pp. 97–126) the United States fails to show the facts to be otherwise than as found by the District Court. Throughout this discussion, however, as it has been done generally throughout its brief, the United States has quoted or referred only to the testimony favorable to its contentions and has in the main ignored testimony which is unfavorable to its contentions. It has also made many incorrect and misleading statements and has drawn many unwarranted conclusions. It is important that these misstatements be called to the attention of the court.

The Contention of the United States that Plant had a Complete Line of Shoe Machinery.

It is alleged in the Brief for the United States (p. 97) that Plant had "developed a complete line of shoe machinery for manufacturing welt, turn, and McKay shoes."

McElroy, whose testimony is referred to by the United States in support of this allegation, does not mention turn shoes in connection with the Plant machinery. There is no testimony which shows that Plant had developed any machinery for making turn shoes, or that turn shoes were made by the Thomas G. Plant Company, the shoe manufacturing concern.

Moreover, in McElroy's testimony, quoted on page 105 of the Brief for the United States, his statement that

Plant's machinery was "a full line" is qualified by the statement "consisting of lasting, welting, stitching and leveling machines." He further admits in effect that he examined only "the essential bottoming room machinery."

And further, McElroy's testimony is discredited by Plant's own statement to McGaffee that

> "he didn't have any rough rounding machine" (R. Vol. 1, p. 781, lines 2–3).

Warren testified:—

> "The invention of the rounding and channeling machine [rough rounder] revolutionized the method of attaching the outer sole" (R. Vol. 1, p. 793, lines 23–24);

and that

> "Every manufacturer that I know of is using . . . the rounding and channeling machine" (R. Vol. 1, p. 793, lines 30–31).

And again, Plant had produced no pulling-over machine (R. Vol. 1, p. 792, lines 10–11), another of the "machines for preparing and attaching the bottoms to the uppers of shoes," the class of machines to which the United States has limited its charge of monopoly.

Eight other Plant machines, including important machines such as the heel seat dinker, stitch separator, and side laster, were either unfinished or regarded by Plant himself as experimental and the Plant shoe company was getting along in one way or another as best it could without these machines (R. Vol. 1, p. 791, lines 34–45; p. 792, lines 1–33; p. 814, lines 1–7. See also Brief for Appellees, pp. 484–486.)

The Contention of the United States that Plant was Successfully Operating his Machines.

It is alleged in the Brief for the United States (p. 97) that Plant "was successfully operating his machines at the factory of Thomas G. Plant Company."

This allegation is entirely unsupported by the record. On the contrary, the record establishes beyond a doubt that the Plant machines were not successfully operating in the Plant shoe factory. In the Brief for Appellees (pp. 486–490) testimony is quoted and referred to that the machines in that factory were crude and really only experimental; that they were constantly breaking down; that they broke a great number of lasts; that it was necessary to employ a large number of men to repair shoes that were defective on account of the poor work of the machines; that it cost three and a quarter cents per pair more to make shoes on them than it cost on the United Company machines; that the profits of the Plant shoe business after the Plant machines were installed were one-half less than they had been when the United Company machines were used; that the machines could not be used for manufacturing shoes according to the methods universally followed by other shoe manufacturers; and that after the purchase the managers of the shoe factory, Plant's former associates, found it impracticable to continue the manufacture of shoes with Plant's machines and of their own volition discontinued the use of those machines and substituted United Company machines.

Typical of this testimony is that of McGaffee, vice-president and general manager of the Plant Shoe Company, who for seventeen years had charge of all the manufacturing

part of the business and looking after the machine end of the business (R. Vol. 1, p. 773, lines 6–9), as follows:—

> "There was a force of machinists taking care of the machinery all the time" (R. Vol. 1, p. 773, lines 32–34). "I was absolutely satisfied that the Wonder Workers wouldn't stand up . . . the longer they ran the weaker they got . . . I was not able to get out the work . . . *I couldn't make the shoes with the Wonder Worker*" (italics ours) (R. Vol. 1, p. 774, lines 15–16, 23–24, 40–41).

McGaffee further stated that the lack of an extension edge organization on the Plant stitcher "was a great hindrance to the quality made on that machine" and that *it resulted in the shoes ripping* (R. Vol. 1, p. 775, lines 34–35, 43–45).

The testimony referred to above and that reviewed on pages 486–490 of the Brief for Appellees is also a complete answer to the argument made in the Brief for the United States (p. 103) with reference to the use of the Plant machines in the Plant shoe factory.

The Contention of the United States that Plant had Contracts with Factories where his Machines could be Made in Large Quantities.

It is alleged in the Brief for the United States (p. 97) that "Plant also had contracts with factories where such machines could be made in large quantities," and an allegation to the same effect is made on page 102.

The evidence fails to show that Plant had contracts with any factory for building any complete machine. He had merely made arrangements with a number of scattered machine shops for building parts of his machines.

As stated by Mr. McGaffee:—

> "The parts were built in about every city where there was a machine shop, because *Plant did not have any factory big enough to build his own parts . . .*" (italics ours) (R. Vol. 1, p. 773, lines 25–27).

The Contention of the United States that Plant was Offering to Equip Other Manufacturers.

It is alleged in the Brief for the United States (p. 104) that Plant had offered to install his machines in the factories of the Commonwealth Shoe & Leather Company, the W. H. McElwain Company, and the Endicott-Johnson Company and "was prepared to furnish his machines to shoe manufacturers generally."

As shown in the Brief for Appellees (p. 481) Plant's offer to install his machines in the factories of the Endicott-Johnson Company and the Commonwealth Shoe & Leather Company was made with the ulterior motive of forcing the United Company to buy him out, and it was so found by the District Court, which held (Dodge, J., R. Vol. 1, p. 1142):—

> "There is uncontradicted evidence of declarations by Plant in 1909 that his intention was to equip these two other factories and his own with his new machines and then sell out to the United Company. That the effecting of such a sale, and not any actual competition in the market with machines then in use, was his real purpose, is hardly left doubtful by the history of his subsequent negotiations with the defendants."

There is no proof of an offer of machines to the W. H. McElwain Company.

Plant would not even permit Hazzard, a large shoe manufacturer, to look at his machines. (See Brief for Appellees, p. 482.)

The Contention of the United States that the Plant Machines were "Efficient Competitors of the United Machines in the Opinion of Experts."

In support of its allegation (p. 104) that in the opinion of experts the Plant machines were "efficient competitors of the United machines," the United States relies first upon the testimony of McElroy, Florsheim, Selz, and Jones, and then upon an unfair statement of the testimony of Warren and Howe.

But the testimony of McElroy, quoted by the United States (p. 105), and its summary of Florsheim's testimony show that both of those witnesses testified as to the quality of the *shoes* operated upon by Plant's machines and that neither of them testified that the *machines* were efficient. The Brief for the United States says (p. 106) that Selz expressed the opinion "that the machines were capable of being used in the manufacture of men's welt shoes" and that Jones testified that Plant's machines were adapted for the manufacture of men's shoes as well as women's.

But on cross-examination Selz testified that he questioned the strength of the Plant machines for making men's shoes and that he had never seen them used for men's shoes (R. Vol. 1, p. 155, lines 33–45; p. 156, lines 1–3). And McElroy on cross-examination testified:—

> "To the best of my information those machines had never made any men's shoes for the market. I questioned the strength of those machines for making men's shoes. . . . If his machines had been used commercially on men's shoes the frames should have been stronger" (R. Vol. 1, p. 193, lines 16–18, 22–24).

Jones' testimony is discredited by the testimony of Reed, the treasurer of Jones' Company, who has charge of the manufacturing of the shoes. He testified that he thoroughly examined the Plant machines in 1910, considered the question of equipping his factories with the machines and decided not to take them. He said:—

> "We thought that it would be too much of a risk, and that we should have to lower our standard of shoemaking" (R. Vol. 1, p. 720, lines 12–13).

Furthermore, Florsheim was a member of the Shoe Manufacturers' Alliance, and Selz and Jones were both stockholders in the Boylston Company, a competing shoe machinery concern. Testimony showing in detail their prejudices is reviewed in the Brief for Appellees (pp. 494–496).

Moreover, it is established by overwhelming evidence which is reviewed in detail in the Brief for Appellees (pp. 484–492), some of which we have already referred to (supra, pp. 116–118), that Plant's machines made shoes by obsolete methods and could not be used for making shoes according to the methods universally followed by other shoe manufacturers; that even for making shoes according to Plant's obsolete methods the machines were not commercially satisfactory in his own factory where women's shoes only were made; and that Plant's machines could not have been used on men's shoes.

The United States quotes (p. 107) the testimony of Mr. Warren and Mr. Howe in support of this contention that the Plant machines were "efficient competitors of the United machines."

The quoted testimony of these experts on its face related to the value of the Plant *inventions*, not the Plant machines.

Warren testified:—

> "Generally speaking they were of such construction that they would break and get out of order" (R. Vol. 1, p. 794, lines 17–18).
>
> "And in looking over all these Plant machines we found by a careful examination that they were *faulty in construction, light in weight in places, and badly designed*" (italics ours) (R. Vol. 1, p. 790, lines 28–31).
>
> "These machines of Mr. Plant's, built as they were, in my opinion *would not have been commercially successful* to do work under the varying conditions under which machines have to be supplied to shoe manufacturers" (italics ours) (R. Vol. 1, p. 790, lines 15–18).

Mr. Howe testified that the Plant machines were

> "too light to stand commercial use for making men's work . . . were not strong enough for continuous use, in my judgment, on his own manufacture, women's welts" (R. Vol. 1, p. 688, line 44; p. 689, lines 8–9).

The conclusion is certainly justified that the United States has not shown any ground for questioning the finding of the District Court as to the character and capacity of the Plant machines. This finding also specifically answers the allegation of the United States (p. 232) that

> "the record clearly shows that the Plant machines were right at the threshhold of extended competition with the United Company's machines."

That finding was as follows:—

> "Whatever the merit of Plant's inventions, these machines in which he had first embodied them are not shown by the evidence to have been commercially

successful in September, 1910, or to have been capable of such success in their then stage of development. They are shown to have been lightly built, not adapted to produce men's shoes, and by no means satisfactory in making women's shoes, the kind of work to which the Plant factory was devoted. The evidence is uncontradicted that, while operated there, they fell behind the United Company's machines, which they had supplanted, in efficiency—that breaking down and defective work was more frequent with them—and the cost per pair of making shoes with them distinctly greater. Though some of them, as later developed and improved by the United Company, proved to have merit, the most that can be fairly said of them in 1910, on the evidence, is that they were more or less promising experimental machines. There was no complete set of them for combined operation; for that purpose several important machines were yet to be developed. In the state in which the United Company took them over, they were not found capable of profitable use. *Nothing is found in the evidence which affords reasonable support for the petitioner's contention that they were 'right at the threshhold of extensive competition with the United Company'*" (italics ours) (Dodge, J., R. Vol. 1, p. 1143).

The Contention of the United States that the Defects in Plant's Machines could have been Easily Remedied.

It is alleged by the United States (p. 108) that "There is, however, nothing in the record to indicate that the defects [in the Plant machinery] were of such character as not to be easily remedied by the alterations and adjustments common in the practical working out of a project like Plant's."

There is no evidence in this record to support this asser-

tion, but, on the contrary, there is a great deal of evidence, which is reviewed in the Brief for Appellees (pp. 496–500), which shows what a tremendous undertaking it is to transform experimental machines into successful, commercial machines.

The Contention of the United States that the Subject of Negotiation was Plant's Entire Line of Machinery rather than his Inventions.

In the Brief for the United States it is alleged (p. 108) that "during the entire negotiations nothing was talked of but the buying of Plant's *entire* line of machinery," as distinguished from the particular inventions.

There is no evidence in the record in support of this assertion and it is specifically contradicted by Mr. Winslow, who testified:—

> "During these negotiations nothing except Plant's *inventions and patents* was the subject of discussion" (italics ours) (R. Vol. 1, p. 481, lines 12–13).

If the United States is endeavoring on page 108 of its brief to argue that the United Company should have bought only the inventions which it knew would be of value, it should be borne in mind, first, that particular improvements could not have been singled out *during the negotiations* for the reason stated by Mr. Winslow:—

> "As to whether anything was said in our negotiations with reference to the purchase of those particular improvements, I didn't know what his improvements consisted of, as I have already stated. *I didn't know what he had or the value of his inventions* until I went up and examined them in September and had my experts examine them" (italics ours) (R. Vol. 1, p. 559, lines 28–33);

and, second, that the United States loses sight of the fact that the *United Company could only buy what Plant wished to sell.* It is quite obvious that Plant wished to sell all, and not a part only, of his inventions (R. Vol. 1, p. 486, lines 2–6; p. 487, lines 11–16).

The Contention of the United States that Negotiations with Plant were Affected by Western Manufacturers.

The United States alleges (p. 112) that "it is fair to conclude that Winslow and his associates were well aware that negotiations were going on between Plant and the shoe manufacturers, and that unless the United people were prompt in closing the bargain the shoe manufacturers would obtain the Plant machines and establish a vigorous rival of the United Company."

The United States points out (p. 111) that Endicott knew "as far back as June, 1910," that the Western manufacturers were coming to examine Plant's machines and that as "a leading figure in the defendants' negotiations, [he] must have informed Mr. Winslow" (p. 112). This evidence merely shows that Endicott knew in June, 1910, that these Western manufacturers proposed to or might examine Plant's machines. It does not show that there were any negotiations pending between the Western manufacturers and Plant for the purchase of his machines and, as a matter of fact, no such negotiations were pending. It shows at most that Plant had arranged or hoped to arrange to have these shoe manufacturers look at his machines, whether for the purpose of inducing them to use some or all of them, or for the purpose of selling them his patents, or for the purpose of getting their advice or criticism does not appear.

The evidence further shows that no attention was paid to the Western manufacturers, because the unquestioned evidence shows that after "Endicott knew" that they might examine the machines, Mr. Winslow, on four separate occasions, broke off negotiations which had been initiated by Plant, viz.: on June 23rd (R. Vol. 1, p. 577, lines 12–14), on June 27th (R. Vol. 1, p. 483, lines 11–12), on July 5th (R. Vol. 1, p. 484, lines 16–21) and on September 16th (R. Vol. 1, p. 486, lines 1–44).

Mr. Winslow testified:—

> "Mr. Plant had told me, I think on the evening of the 20th, that he was expecting the Western people in Boston. . . . I did not pay much attention to it because it did not affect me one way or the other" (R. Vol. 1, p. 488, lines 18–23).

This was the evening on which the Plant purchase was practically agreed upon, not the day prior as stated by the United States (p. 111). So far as appears this was the first information Mr. Winslow had that the Western manufacturers intended to examine the Plant machines. There is not the slightest intimation, however, that Plant then told Winslow that any negotiations were pending for a sale to the Western manufacturers, and as a matter of fact none were pending. Plant had not made any offer to them, so far as appears. His first proposition to them to sell was made after he had agreed to sell to the United Company, when he made them a proposition which he knew they could not accept. If they came to Boston for the purpose of purchasing the Plant patents, it was for the purpose of examining the machines, and opening negotiations, not for the purpose of closing any pending negotiations.

The United States has not shown any ground for questioning the finding of the District Court that the Western Manufacturers had no effect upon the negotiations. That finding was as follows:—

> "It [the evidence] does not charge the defendants with any knowledge, at the time they came to terms with Plant, of any negotiations between him and the manufacturers referred to. No reference appears to have been made to them or their doings during the defendants' negotiations with Plant, and no reason is found to believe that apprehension lest he might conclude some arrangement with them induced in any degree the defendants' final agreement with him. Were it important, it might be added that so far as the evidence can be said to show anything regarding Plant's intentions toward them it shows that he never really meant to enter into any arrangement with others if he could get the defendants to take off his hands everything which he desired to sell; and no purchase so extensive as this appears to have been at any time contemplated by the manufacturers mentioned in the petition" (Dodge, J., R. Vol. 1, p. 1144).

The Attempt of the United States to Discredit Endicott's Testimony.

Under the heading "Endicott's Strange Story" (p. 114) counsel for the United States discusses the participation of Mr. Endicott in the negotiations of Plant with the United Company and asserts "Endicott's maneuvers are difficult to understand. His story excites curiosity and suspicion."

That the United Company was much pleased to welcome to its board of directors a man whose ability had created the greatest shoe manufacturing business in the world was

perfectly natural. The insinuations which the United States makes against a man of Mr. Endicott's standing are not creditable to the United States. They need no answer, but they are answered by Mr. Endicott's testimony, which is clear and straightforward throughout and which is corroborated by Mr. Winslow (R. Vol. 1, pp. 479–487), Mr. Herrick (R. Vol. 1, pp. 602–615), and Mr. Howe (R. Vol. 1, p. 683, lines 9 *et seq.;* p. 686, lines 34 *et seq.*).

The Contention of the United States that Defendants Showed Anxiety to Secure the Plant Machines.

The United States alleges (p. 113) that "the whole history of the transaction shows that the defendants were keenly alive to the importance of removing from their path so dangerous a competitor and were exceedingly anxious" to secure Plant's machines.

The record proves the contrary to be the fact. The evidence clearly shows that throughout the negotiations Mr. Winslow never made any offer to Plant, but that the negotiations were begun by Plant and renewed by him several times after Winslow had definitely broken them off (R. Vol. 1, p. 559, lines 16–18). The negotiations are reviewed in the Brief for Appellees (pp. 525–534).

All the evidence on the history of the negotiations proves conclusively, not that Winslow was exceedingly anxious to get Plant's machines, but that Plant was exceedingly anxious to have Mr. Winslow get them.

In support of its contention the United States alleges (p. 114) that "defendants hastened to give Mr. Plant a check for $500,000," and finds significance in the fact that at the time the check was delivered "not a document

had been drawn." The evidence shows that, as Mr. Winslow testified:—

> "It was a part of the arrangement with Mr. Plant that if we accepted his proposition he was to be paid $500,000 and then the papers would be drawn" (R. Vol. 1, p. 488, lines 2–4).

Mr. Herrick testified,—

> "On the morning of the 22d a check for $500,000 payable to my order was given to me, and a couple of hours later I handed my check for $500,000 to Mr. Carr, Mr. Plant's attorney. This payment was made because Mr. Plant insisted that there ought to be something paid on account, and Mr. Carr, as I remember it, named the figure" (R. Vol. 1, p. 607, lines 5–10).

The Contention of the United States that Suits were Brought to Compel Plant to Sell.

The United States says (p. 117), referring to the suits brought by the United Company against Plant and the Thomas G. Plant Company (P.'s Ex. 162), that "These suits, no doubt, were intended in part at least as spurs to induce Plant to sell and hence certainly tend to show that the United Company believed Plant to be a dangerous competitor."

There is no ground for this conclusion. By reference to Plaintiff's Exhibit 162, a physical exhibit not reproduced, it will be seen that the prayers of the bill were in substance that injunctions be issued restraining the Plant Company from using machinery in violation of its lease and license agreements with the United Company and that Plant, the individual, be enjoined from supplying the Plant Company during the terms of said agreements with shoe

machinery "in substitution for" the United Company's machines leased on said agreements. In other words, this suit was brought merely for the purpose of enforcing certain contracts that the Plant Company, the shoe manufacturing concern, had made with the United Company.

The infringement suits were brought for the purpose of restraining infringement of the United Company's patents. This was a proper and normal step for the owner of patents to take in the enforcement of rights under the patents.

It would appear, however, that if defendants had been anxious to continue negotiations with Plant they would not have risked interrupting them by these suits.

The Contention of the United States that the Plant Improvements were of Little Use to the United Company.

The United States alleges (p. 118) that "defendants' own witnesses show that however valuable the Plant improvements were to him as a present and prospective competitor of the defendants, they were of little use to the United Company."

There is absolutely no evidence from defendants' witnesses, or any other witnesses for that matter, to the effect that the Plant improvements were of little use to the United Company. The evidence is all to the contrary. For example, Mr. Warren testified:—

> "I later told Mr. Winslow that the improvements on the welter and stitcher were worth all he gave for the entire property, and that was my opinion" (R. Vol. 1, p. 788, lines 8-10; p. 813, lines 6–9).

Appellees' Brief (pp. 506–513) contains a full statement of the evidence of practical shoemakers as to the value

of the stitcher and welter improvements. It is there shown conclusively that these improvements resulted in machines which operate faster, turn out more work, do work of better quality, are more economical for the shoe manufacturer, and enable the operator to earn higher wages.

The United States quotes (p. 119) Mr. Howard's testimony with reference to the stopping mechanism of the Plant stitcher as follows:—

> "... five different inventors employed by the United Company were put to work upon the *problem* of providing a *commercially satisfactory* stopping mechanism. ..."

What Mr. Howard really said is this:—

> " ... five different inventors employed by the United Company were put to work upon the problem of providing a commercially satisfactory stopping mechanism which could be incorporated in the organization of the model K out-sole stitcher, which was then the standard commercial machine of the United Company" (R. Vol. II, p. 2297).

The United States concludes, from the fact the United Company put a large number of inventors at work in order to remedy the defects in the mechanical constructions in which Plant had embodied his valuable inventions and to adapt the welter and stitcher improvements to the United Company's machines, that these improvements, in themselves, were not of great value.

Possibly the explanation of this curious argument by the United States is that it may have been prepared by counsel not familiar with inventions and patents. Of

course the fact that the particular mechanical constructions in which Plant had embodied his extremely valuable inventions were crude and defective has not the slightest bearing upon the value of his inventions. But the commercial advantages of those inventions could not be realized until they had been embodied in satisfactory commercial form. That was one of the problems with which the United Company's inventors had to deal. The other problem was the development of mechanical organizations which would fit the United Company's own machines. That in doing this work the United Company's inventors should make still further improvements was natural and to be expected.

The extended use which the United Company has made of the Plant inventions and their great value to the United Company are shown by the evidence reviewed in the Brief for Appellees (pp. 500–514).

The United States has not called attention to any evidence which should lead the Court to question the finding of the District Court as to the value of the Plant inventions, which was:—

> "The agreement to take the patents and inventions was not made until after a careful examination and report as to their merits. The belief thereon founded that, used as above, they would be worth acquiring upon the terms proposed, is shown to have been justified by the result, and the acquisition cannot be criticised so far as it was occasioned by that belief. As developed and added to its own machines by the United Company, some of the inventions acquired have proved to be of a value such as fairly justifies their claim that the patents acquired were the controlling feature of the purchase" (Dodge, J., R. Vol. 1, p. 1145).

The Argument of the United States that the Shoe Machinery Art would have been Advanced by the Sale of Plant's Machinery to a Group of Manufacturers.

The United States contends (p. 118) that all that was necessary in order that the shoe machinery art might be benefited by the Plant improvements was "to permit the shoe manufacturers who were ready and anxious to purchase an interest in Plant's machinery to carry through their design."

There is uncontradicted evidence that there were 708 distinct cases of infringement of the United Company's patents of 37 Plant machines (Defs.' Ex. 273, R. Vol. 5, p. 733).

The sale of an interest to the shoe manufacturers mentioned would have in no way avoided such infringements. Furthermore it would not have permitted the combination of the United Company's patents with the Plant patents, and the consequent advance in the art of shoe machinery which was the object and the result of the acquisition.

The Contention of the United States that the Avoidance of Litigation was not a Motive in the Plant Purchase.

In the Brief for United States it is alleged (p. 120) "that the avoidance of litigation was in fact an actuating factor in the transaction does not appear. In no part of the negotiations was it suggested that the defendants should buy out Plant in order to avoid litigation."

On the contrary, that both parties had in mind the avoidance of litigation and that it was a factor in the negotiations is shown by the fact that *formal releases were exacted by both parties.* On September 23, 1910, the United Company agreed to deliver to Plant releases "providing

for the dismissal or discontinuance . . . without costs . . . of the suit now pending in the Supreme Judicial Court of Massachusetts . . . and suits now pending in the United States Circuit Court against said Plant . . . and . . . general releases including any and all claims . . ." (P.'s Ex. 132, R. Vol. 4, p. 935).

On the other hand on September 30, 1910, Plant executed a formal release to the United Company of all claims, referring specifically to "certain suits" which he had planned to bring against the United Company (P.'s Ex. 137, R. Vol. 4, p. 1037).

The allegations of the United States are directly contradicted by the testimony of Mr. Howe and Mr. Winslow. Mr. Howe testified:—

> "Then another consideration for the purchase was this avoidance of litigation, either by ourselves against him [Plant], which would have cost a great deal of money and would have annoyed the trade very much, the shoe manufacturers, and also the cost and annoyance of having to be sued by Plant" (R. Vol. 1, p. 877, lines 41 *et seq.*).

Mr. Winslow testified:—

> "The confusion and conflict in the patent situation of my own company and of Mr. Plant, the chaos which might result from conflicting claims and constant litigation, was a substantial consideration in my mind . . . and when Mr. Plant offered to me the patents at a price which to my mind was less than their value . . . it might be said to be a controlling factor" (R. Vol. 1, p. 862, lines 24–31).

The United States finds it significant that (p. 117) "Defendants' witnesses talk of counter infringements by their machines. ***But no litigation was begun by Plant.***"

It cannot be doubted that if Plant had kept on he would have enforced his rights under his patents and would have brought suits on account of infringement by the United Company's machines; indeed, as we have just stated, his intention to bring suits is asserted over his signature in a release signed by Plant on September 30, 1910:—

> "I . . . have made certain claims against the United Shoe Machinery Company . . . and have planned to bring certain suits against said United Shoe Machinery Company" (P.'s Ex. 137, R. Vol. 4, p. 1037).

Mr. Winslow and Mr. Howe fully expected that Plant would bring suits against the infringing machines of the United Company (R. Vol. 1, p. 862, lines 25–26; p. 877, lines 27–30; p. 878, lines 1–2).

Another important fact is that Plant had already defeated the United Company in six interferences. Twenty-three interferences had been declared in the Patent Office between patent applications owned by Plant and applications owned by the United Company. In six of these Plant had secured favorable decisions (R. Vol. 1, p. 846, lines 14–17; Defs.' Ex. 272, R. Vol. 5, p. 730).

The United States alleges (p. 121) with reference to infringement suits against Plant that "it does not appear that if any or all of them had been sustained it would have been fatal to the line of machinery owned by him."

A complete answer to this allegation is found in the 708 distinct instances of infringement of United Company patents by 37 Plant machines, as set forth by Mr. Howard in Defs.' Ex. 273 (R. Vol. 5, p. 733). No testimony was introduced by the petitioner to refute these instances of infringement (R. Vol. 1, p. 394, lines 40–43).

That these instances of infringement were serious is apparent from the fact that it was the *general organization* of at least six Plant machines which infringed the patents of the United Company and in respect to two other machines Mr. Howard testified:—

> "The patents infringed by the Plant Heeler and the Plant Heel Attacher on Wood Lasts covered both these machines so thoroughly that by no possibility could they have been changed to avoid infringement. Plant's only course would have been to junk the machines and begin over again" (R. Vol. 5, p. 746, lines 27–31).

The conclusion is certainly justified that the United States has not shown any ground for questioning the finding of the District Court that the purchase resulted in relieving the United Company of a burden of litigation threatening interminable controversy. That finding was as follows:—

> "The evidence shows also, without serious contradiction, that one result of the bargain made with Plant was to relieve the United Company from an amount of litigation, then pending or in prospect, which would otherwise have burdened and hindered it . . . And between Plant or concerns wherewith he was identified and the United Company there were pending interferences, claims of infringement on both sides, and pending infringement suits, raising questions relating to his or its patents, so numerous, complicated, and important as to threaten interminable controversy" (Dodge, J., R. Vol. 1, p. 1145).

The Contention of the United States that the Plant Stock was of Comparatively Little Value in the Transaction.

It is alleged (p. 123) that "the evidence does not show that the stock of the Plant Company was specially valuable."

The evidence shows that the earnings of the Plant Company for the four years preceding its acquisition had averaged $738,000 annually. Plant owned and sold sixty per cent. interest in the stock of the company. It is shown in the Brief for Appellees (pp. 523–524) that sixty per cent. of the average earnings for the past four years amounted to $442,800 annually and that capitalized at ten per cent. this would show a value of $4,428,000 for the stock.

In addition to this the balance sheet showed net quick assets amounting to ~~$2,183,227.22~~ 3,128,947.96 and a factory and equipment valued at ~~$2,184,500.~~ 1,270,380. these items alone giving to the sixty per cent. stock an equity of ~~$2,820,631.33~~ 2,639,398.78 (P.'s Ex. 132, R. Vol. 4, pp. 1014–1015). That the good-will and trade-marks, including the trade-mark "Queen Quality," were of great value cannot be doubted.

The District Court held (Dodge, J., R. Vol. 1, p. 1144):—

> "That it was of great value is shown beyond question by the dividends then and afterward paid on the stock acquired by the United Company."

The Contention of the United States that by the Plant Acquisition Control of Welters and Stitchers was Secured.

The United States alleges (p. 124) that by the Plant acquisition the United Company "again acquired substantial control of welters and stitchers."

The evidence relied upon in support of this contention of the United States proves that on the contrary a number of other concerns were actually engaged in putting out welters and stitchers, all of which were in business in 1910. These concerns are named in the Brief for Appellees (pp. 564–565).

The Contention of the United States that the United Company Secured Control of the McKay Sewing Machine by this Transaction.

The United States alleges (pp. 124–125) that by the acquisition of the Stanley Company through the Plant transaction the United Company secured complete control of the McKay sewing machine, further alleging that Winslow "was wholly unable to name any other concerns which manufacture it in competition with the United Company." This is not a fair statement of Mr. Winslow's testimony. He said that he could not "remember them off hand" and referred to a list which had already been filed (R. Vol. 1, p. 564, lines 29–31).

That many manufacturers and dealers are prepared to furnish McKay sewing machines is shown in Brief for Appellees (p. 563).

The United States alleges (p. 125) that "no one may use a United lasting machine upon any shoe which has been operated upon by a machine not procured from the United Company, therefore not upon a shoe operated on by a McKay machine procured outside of the United Company." This statement, and therefore the conclusions drawn from it, are totally untrue, as we have shown *supra* (pp. 16–20).

CONCLUSION AS TO PLANT PURCHASE.

It is submitted that the United States has called attention to no evidence which should lead the Court to question the findings of the District Court on the facts of the Plant purchase (Dodge, J., R. Vol. 1, pp. 1142–1146). In its extended discussion of the evidence relating to the Plant purchase the District Court found that the defendants' "claim that the patents acquired were the controlling feature of the purchase" was fairly justified, and that the settlement of the

> "pending interferences, claims of infringement on both sides, and pending infringement suits, raising questions relating to his or its patents, so numerous, complicated and important as to threaten interminable controversy,"

was "a further normal, natural and powerful inducement to the agreement made with him," and then held:—

> "The above reasons, none of them open to any charge of illegality, seem to me to have been the really operative reasons which must have induced the defendants to enter in the Plant bargain upon the terms which he finally offered them. They appear so adequate as legitimate business reasons for doing this as in my opinion to leave no reasonable ground for holding, against the defendants' denial, that it was really a purchase to suppress competition. No such competition or prospect of competition at the time is proved as would justify such a conclusion" (Dodge, J., R. Vol. 1, pp. 1145–1146).

PETITIONER'S CONTENTIONS AS TO MONOPOLY AND AS TO THE NUMBER OF MACHINES PUT OUT BY SHOE MACHINERY MANUFACTURERS OTHER THAN THE UNITED COMPANY.

The petitioner contends that the United Company furnishes practically all of certain types of machines used in bottoming shoes.

The petitioner nowhere in its brief contends that the United Company's machines are not patented or that they are not the best machines made. Nor does it anywhere contend that any other machinery manufacturer furnishes service of the character furnished by the United Company.

There is not the slightest evidence that shoe manufacturers desire to obtain machines of these types as to which a monopoly is claimed from other shoe machinery manufacturers who are offering better machines and are prevented from doing so by the United Company.

There is therefore not the slightest evidence to dispute the following finding of the District Court:—

> "That the degree of success obtained and the preponderance in number of users supplied which the United Company has secured are fully accounted for by the *superior efficiency* it has developed in its *patented machines* for work in combination with each other together with the superior facilities it affords as above for their most efficient use, must be regarded *as shown beyond question*. It is not disputed that

> when the petition was filed, its machines represented in number and amount, *the highest development ever reached in the art* to which they belong; or that they are most in demand by manufacturers of the higher grades of shoes for that reason" (R. Vol. 1, p. 1137) (italics ours).

It, therefore, seems immaterial whether the United Company furnishes all or only a small portion of the types of machines in which it specializes.

Furthermore, the petitioner itself contends that the constituent companies which composed the United Company did at least as large a business in the kinds of machines which they manufactured as the United Company does today. It is admitted, therefore, that the United Company has not acquired a monopoly in these machines, except by taking over the business of the constituent companies, which, since they were essentially non-competing, the United Company was entitled to do as held in *United States* v. *Winslow*, 227 U. S. 202.

As to the other machines put out by the United Company since its formation, such as the pulling-over machines, clicking machines, eyeletting machines, and various new Goodyear auxiliary machines, it is not denied that they are machines created and developed by the United Company under patents, and that these machines have been in existence only a very short time. Whatever business the United Company has in these machines is presumably due to the fact that the United Company has created these machines and no one else has invented machines equally good. We submit that there is nothing in the evidence to refute this presumption that the business done by the

United Company in these machines has been acquired lawfully.

While, therefore, the comparative amount of business done by the United Company and its competitors would seem to be immaterial, as we have stated, nevertheless, the petitioner's contention that the United Company does practically all the business in machines of these various types, and the facts on which it attempts to justify this contention are in many cases so erroneous and unwarranted that we wish to call them to the Court's attention.

The petitioner has attempted to prove its contention in three ways:—

1. By showing the total number of shoe manufacturers in the country and the number of such shoe manufacturers with whom the United Company does business.

2. By the testimony of certain shoe manufacturers who testified that they use some or all of the United Company's machines and by assuming that those shoe manufacturers are typical of all shoe manufacturers.

3. By the testimony of certain shoe manufacturers as to their knowledge of the machinery market, and the testimony of a number of shoe machinery manufacturers as to the kinds of machines which they manufacture and as to the number of machines which they have put out.

The petitioner seems to have assumed that it was for the United Company to prove that it did not have a monopoly of all machines. The United Company introduced in evidence certain exhibits consisting of catalogues and correspondence with various shoe machinery manufacturers showing what machines they manufactured and lists drawn from such catalogues and correspondence and other sources

showing the kinds of machines which other shoe machinery manufacturers furnish. These lists did not purport to be exhaustive.

The United States in rebuttal called the representatives of a number, but by no means all, of the shoe machinery manufacturers mentioned in these lists. It had also called a few shoe machinery manufacturers in presenting its direct case. From statements made by these witnesses as to the number of machines they had put out, the petitioner has attempted to draw up a schedule purporting to show the total number of machines of certain kinds put out by the United Company compared with the total machines put out by its competitors. (See page 142 of Petitioner's Brief.) Not only is this schedule made up from the evidence of only a portion of the shoe machinery manufacturers referred to by the United Company, but it further contains many inaccurate statements which the record itself refutes. We shall comment on this schedule below.

The Attempt of the Petitioner to Prove that the United Company Deals with Most of the Shoe Manufacturers in the Country.

The writer of the brief says at page 132, after referring to the testimony of certain shoe manufacturers, that they used certain machines of the United Company:—

> "Evidence of this kind might have been indefinitely multiplied but even the foregoing was hardly necessary in view of the defendants' admission that they are in business relations with 1,033 shoe manufacturers in the United States (Donham, R. I, 26, 1. 39). When the testimony in this case was closed in 1914, there were, according to the census figures in all 1,090 such

> manufacturers. The census of 1910 showed that in 1909, there were in the neighborhood of 1,300 manufacturers."

Later in the brief the writer calmly assumes that the fact is proved that the United Company does business with 1,033 out of 1,090 shoe manufacturers in the country. For example, at page 227 the writer says:—

> "Not only this, but they occupy such a position that every shoe manufacturer of consequence in the United States must deal with them. Out of 1,090, big and little, they do business with more than 1,033. . . . Those with whom they do not have business relations must be insignificant."

The actual facts are as follows:—

The petition states that there are "about 1,300" concerns manufacturing boots and shoes by machinery (R. Vol. 1, p. 991). The evidence showed that the United Company in 1911 did business with 1,033 lessees who were shoe manufacturers (R. Vol. 1, p. 26, lines 38–40). As to the number of shoe manufacturers in the United States the only evidence was the testimony of Mr. Donham as follows:—

> "As to how many shoe manufacturers there were in the United States at that time, [viz. 1911] I don't find that any two calculations agree or that any one of them agree with the census. From what data I have I should say there were somewhere between 1,300 and 1,500. I haven't the figure of the census of 1910 with me. It was somewhere in the neighborhood of 1,300 as I recall it" (R. Vol. I, pp. 26, 27, lines 41–2).

The foregoing evidence, being the only evidence in the record, would entirely refute the contention of the petitioner that every shoe manufacturer must deal with the United Company for it would clearly show that there are between 267 and 467 shoe manufacturers in the country with whom the United Company does no business at all. The writer of the brief, therefore, calmly goes to the census for 1914, states that by that census it is shown that there were 1,090 shoe manufacturers in the country in 1914 and compares this figure with the number of lessees which the United Company had in 1911, three years previously.

These census figures for 1914, of course, were not in evidence and were not prepared until after the evidence was closed in the lower court. Furthermore, the census does not purport to give the total number of shoe manufacturers in the country. It only purports to give the list of establishments from which "returns were received." *Non constat* there may be hundreds who did not make returns and it is most likely that there were a great many who did not make returns.

We pass over the question of whether a census report of this kind can be referred to when not introduced in evidence and also whether such a report can be used as evidence of such a fact as that here in question.

But we must call to the attention of the Court that the petitioner has misquoted the census for 1914. Instead of stating that there were 1,090 shoe manufacturers in the country, it actually states that "returns were received from 1,355 establishments in 1914." (See Census Bureau's Summary concerning the manufacture of footwear for 1914.) Using, therefore, the method employed by the

United States for determining the number of shoe manufacturers who do not deal with the United Company, we find that there are 322 such shoe manufacturers.

Petitioner's Table Purporting to Show the Number of Machines of Certain Classes put out by the United Company and the Number of Machines of the Same Kinds put out by Competitors.

Upon page 142 of the petitioner's Brief appears a tabulation purporting to indicate

> "the number of principal bottoming machines together with eyeletting and clicking machines which the United Company had out March 1, 1911, and the number which all other concerns had out at that time."

It is stated that this is a summarization of Appendix B, Part 1, of the Government Brief, aided by Defendants' Exhibit 228.

It is attempted to use this summary as a basis for the assertion that the United Company controls all the clicking, all the pulling-over, all the pegging, and all the standard screw machines, and about ninety-six per cent. of the total number of bottoming machines in use, upon which to predicate the conclusion that the defendants now monopolize the fie'd which they "have pre-empted by combination and acquisition."

The summary is not justified by the record, and the conclusion attempted to be deduced is erroneous. While the statement of the number of machines put out by the defendants is substantially correct (because of the use made of the Defendants' Exhibits), it does not appear from any affirmative testimony in the record that the number

of machines put out by all other concerns on March 1, 1911, is as therein stated. The impression is sought to be conveyed that Appendix B, Part 1, is a condensed statement drawn from uncontradicted testimony and undisputed sources indicating positively the number of machines put out by other concerns. But the witnesses whose "uncontradicted evidence" is referred to were, as stated in the Government's Brief on page 134, representatives only of a number of manufacturers advertising machines in competition with the defendants' machines, and testified only as to the actual character and amount of business of their principals. In other words, the United States produced as witnesses representatives of *some* of the concerns referred to by the defendants, who testified as to the output of their respective businesses and nothing more, and the aggregate of the machines so testified to is asserted by the summary to be the total amount of machines put out by *all* other concerns. Whatever may be the total of the machines actually put out by all other concerns, it certainly cannot be demonstrated by showing the number of machines put out by a part only of such concerns.

But the inferences and conclusion sought to be deduced from the summary are still more misleading.

The intimation, for example, is that the defendants have a monopoly of the clicking machines, which they have secured by "combination and acquisition."

There is, however, no suggestion that this clicking machine is itself the development of the United Company, and a very remarkable invention which probably saves more money for the shoe manufacturers than any other machine ever produced and which was not put into use until 1908 or 1909 (R. Vol. 1, pp. 425–426). It is a pat-

ented machine embodying thirteen patents and under these patents the United Company has the exclusive right of making, vending, and using. And it is *this* machine which is asserted by the United States to be a part of the field which the defendants have unlawfully "pre-empted by combination and acquisition."

Again, the pulling-over machine, of which it would appear from the summary the defendants have a monopoly is an invention of the United Company's, developed at vast expense, doing operations previously done by hand exclusively, and first put out in 1902. This machine is protected by nineteen patents (R. Vol. 2, pp. 2542 *et seq.*).

It is suggested by the summary that the defendants have a monopoly of the standard screw machines, of which there appear to be put out by the United Company 409. No reference is made to the fact, however, which appears in the Defendants' Exhibit 226, that the number of standard screw machines which the United Company had out on lease was 826 in 1900 but dwindled to a few more than 400 in 1911. This means, of course, that the manufacture of standard screw shoes had fallen off, and the steadily diminishing market for such machines would naturally not be very attractive to competitors.

The same observations can be made in regard to pegging machines, and to the conclusion sought to be suggested by the summary.

The dependability of the summary as a basis for any just conclusion as to the monopolization of the field by the defendants is well tested by consideration of the figures as to eyeletting machines and McKay sewing machines.

The summary indicates that the United Company had out 4,472 eyeletting machines and all other concerns 150.

Defendants' Exhibit 228 shows of the total 4,472, 2,435 are power machines and the balance are foot power eyeletters and miscellaneous machines of Eyelet Department.

It appears clearly in the testimony of Mr. Winslow (R. Vol. 1, p. 451, lines 38 *et seq.*) that the defendants lease eyeletting machines to harness makers, trunk makers, corset manufacturers, and others, and this total includes machines so leased as well as machines leased to shoe manufacturers.

The total of 150 eyeletting machines asserted by the summary to be the number of eyeletting machines put out by all other concerns is simply the number testified to by the witness Hall, called by the Government as representative of the American Worsted Company, as the number of machines put out by his concern (R. Vol. 1, p. 953).

Muther, representative of the Peerless Manufacturing Company, one of the concerns referred to, was called by the Government, and his testimony is disposed of in the Appendix thus: "Output not stated but we may assume that if it was large enough to be significant it would have been stated, by the defendants," and the number of machines put out by his concern is represented in the Appendix as zero. Muther testified that his concern manufactured eyelet setting machines, skiving machines, hook setting machines, etc.

> "We sell our eyeletting machines outright or loan them without charge to people who buy eyelets from us. . . . Our eyeletting machine is the Peerless rapid eyelet machine. It will insert any kind of eyelets in shoes. They are put out on loan leases and we ask customers to buy all their eyelets from us—but they don't. . . . We supply six or eight different kinds of

> eyelets, mostly japanned, which we buy and resell. We buy our japanned eyelets from the United Company and the Atlas Tack Company. . . . We can buy and sell all we want—all our customers require. . . . We sell more Atlas than United eyelets and our customers are altogether shoe manufacturers. . . . Our machines are sold to shoe manufacturers who use other machines obtained from the United Company. . . . Our machines and theirs are sometimes used side by side in the same factory. Manufacturers use either they want—or both" (R. Vol. 1, pp. 303–304, lines 13–14).

The output of eyeletting machines thus described is designated by the United States as "None."

In the summary the number of McKay sewing machines put out by the defendants is set at 898 and the number put out by all other concerns is stated to be 8.

The surprising inaccuracy of this statement is illustrated by the fact that in 1909 in the principal shoe manufacturing districts there was a total of 1,488 machines outstanding, of which only 308 had been supplied by the United Company. In the Lynn district there were 59 McKay sewing machines supplied by the United Company, and 367 supplied by others. See main brief, p. 563.

And yet in the face of this evidence the Petitioner's table shows only 8 McKay machines supplied by others than the United Company, because the only machinery manufacturer who testified that he manufactured these machines said he had put out 8.

These considerations would seem to indicate the absolute worthlessness of the summary as a statement of fact and to demonstrate the unsoundness of the reasoning premised upon it.

One further fact is noticeable with respect to this table which the petitioner uses to show monopoly. It refers to only 13 types of machines out of the hundreds of different types manufactured by the United Company.

The Petitioner's Table at Page 142 of its Brief Disproves the Petitioner's Own Contention.

However, even assuming that the table given at page 142 of the petitioner's Brief, showing the number of machines furnished by the United Company as compared with the number of machines furnished by all other shoe manufacturers, were correct, it would disprove the petitioner's own contention.

The petitioner's contention cannot be that the United Company is an unlawful monopoly merely because its patented machines are generally or even universally used by all shoe manufacturers.

The contention of the United States must be that the United Company has acquired such proportion of the business as it holds either by buying up competitors and thus suppressing competition or by the restrictive provisions in its leases.

But looking at the table at page 142 it clearly appears that as to certain of these machines, in respect to which it is alleged that the United Company has a complete monopoly, it cannot be contended either that the United Company has bought up competitors making these machines or that its leases have compelled shoe manufacturers to take them. For instance, take the eyeletting machines. The United Company did not acquire, nor has it maintained its business in eyeletting machines by buying out competitors. Furthermore, the United Company does

not put out a single lease which restricts the use of any of the more than three hundred machines which it puts out to use with its eyeletting machines. In other words, a shoe manufacturer can take any one or all of the machines which the United Company puts out and use a competitor's eyeletting machine in connection with them. Self-evidently, therefore, even accepting the petitioner's view as to the unlawful character of the lease provisions, they cannot either compel or induce a shoe manufacturer to take eyeletting machines from the United Company. Yet the table shows that the United Company has furnished substantially as large a proportion of the total eyeletting machines in use as it has of any other class of machines, and that it furnishes a much larger proportion of such machines than it does either of welt sewing or outsole stitching machines.

Take the clicking machine. The United Company did not acquire, nor has it maintained its business in clicking machines by acquiring competitors who manufactured this machine. It invented that machine itself and first put it out about 1909. The United Company does not require a lessee of any of its machines to use them in connection with its clicking machine. It, therefore, cannot in any way by its leases induce or compel lessees to take its clicking machine. There is absolutely nothing in the record even to suggest that the United Company has acquired its business in clicking machines for any reason except the merits of the machine. Yet, according to the petitioner's contention, the United Company does the entire business in clicking machines. It must be self-evident that the machine is used because it is a patented machine, because it is useful to shoe manufacturers, and

because no other person furnishes an equally valuable machine.

Take also the pulling-over machine. As to this, the petitioner's table also alleges that the United Company has a complete monopoly and that competitors furnish no machines whatsoever. Yet it has not acquired this business by buying up competitors who were putting out the machine, and not a single machine which the United Company furnishes is restricted to use with the pulling-over machine, except the No. 5 lasting machine, which was particularly designed for use with the pulling-over machine. The fact that this particular type of lasting machine is restricted to use with the pulling-over machine cannot compel shoe manufacturers to take the pulling-over machine, because a shoe manufacturer can obtain either the hand method welt machine or the hand method McKay machine, both excellent machines, preferred by some shoe manufacturers to do work which the No. 5 machine would normally do.

It, therefore, is self-evident that the leases of the United Company do not induce or compel lessees to take the United Company's pulling-over machine. Its success in supplying pulling-over machines must be due solely to the fact that its pulling-over machine is a useful patented machine which lessees desire in their factories and that no other machinery manufacturer produces an equally useful machine.

As to the United Company's success in furnishing three of the machines as to which monopoly is charged, the record, therefore, shows that neither the restrictive clauses in the United Company's leases nor its purchases of competing concerns had the slightest effect. This being true,

it is only fair to assume that the same is true of the ten other machines referred to in the petitioner's table at page 142. As regards all the machines shown in the table, the United Company is putting out improved patented machines and each is just as useful in its field as the eyeletting machine is in its field, or the clicking or pulling over machines in their fields.

The Petitioner Admits that there is a Large Field of Shoe Machinery not Occupied by the United Company at all or in which there are Competitors Actively Engaged in the Business.

In the first place, the petitioner does not deny that the United Company does not manufacture at all machines for sewing the uppers to shoes. It does not deny that the United Company furnishes only from thirty to fifty per cent. of the number of machines used in the ordinary shoe factory. (See our main brief, pp. 557–560.)

Thus in Hazzard's factory where most of the machines furnished by the United Company and suited for his work are used, out of a total of 746 machines in the factory only 327 were obtained from the United Company, or less than forty-four per cent., and, deducting General Department machines which may be bought outright, only 296 machines, or less than forty per cent. In Jonathan Brown & Son's factory, a typical McKay shoe factory, in which United Company machines are used, out of a total of 424 machines only 128, or thirty per cent., were obtained from the United Company, and, excluding General Department machines, which may be bought outright and as to most of which the United States does not claim a monopoly, only 64 machines, or fifteen per cent. of the total, were obtained from the

United Company (see main brief, p. 558). Furthermore, the petitioner does not deny that in the classes of machines which are furnished by the United Company there are a very large number of competitors.

The petitioner's own brief states at page 134 that

> "85 representatives of a number of these manufacturers were, however, called by the Government (R. I, 882–960 and elsewhere) and testified as to the actual character and amount of the business of these companies."

At pages 132 to 156 of the Appendix to our brief is summarized the testimony of about *fifty competing shoe machinery manufacturers* who were called by the United States. Their testimony establishes that they do a business which taken altogether is substantial and which cannot be dismissed as insignificant.

A number of these manufacturers are prepared to furnish complete lines of shoe machinery for manufacturing all kinds of shoes. Thus Hamel testified that he has a complete set of machines for making turn shoes and a complete set of machines for making welt shoes. (See main brief, p. 564.) J. J. Doidge, manager of the R. H. Long Machinery Company, testified that his company is ready to supply a full line of machinery for welt or turn shoes. (See main brief, pp. 564–565.) Edwin A. Webster, a director of the Haverhill Shoe Machinery Company, testified that his company undertakes to fill the requirements of a manufacturer whatever they are:—

> "We advertise that we furnish any manufacturer a full line of all kinds of shoe machinery, whether it is for welts or McKays, or turns or pegs or anything else" (R. Vol. 1, p. 301, lines 5–9; see also our main brief, p. 565).

The foregoing, being the admitted evidence, it would seem that the brief writer was indulging in exaggeration when he said (p. 167):—

> "It [the United Company] is absolute monarch of the industry. No competitor can exist unless for its own pleasure or policy it withholds its destroying hand."

Shoe Manufacturers may Obtain a Complete Set of Machines without taking any from the United Company. If they take the United Company's Machines it is because they prefer them.

Machines can be obtained by any shoe manufacturer from competitors of the United Company. While, as stated above, the record does not show the number of machines of various kinds furnished by all the competitors of the United Company, it does affirmatively show that a complete set of machines may be obtained by any shoe manufacturer from a number of different shoe machinery manufacturers and that no shoe manufacturer is obliged to come to the United Company for any of his machines.

Thus, as we have stated above, C. A. Hamel, the R. H. Long Machinery Company, and the Haverhill Shoe Machinery Company each offer a complete line of machines. (See main brief, pp. 564–565.)

The petitioner's brief founds a number of its arguments on the contention that practically every shoe manufacturer must come to the United Company for his lasting machines (Petitioner's Brief, pp. 125–164). Apparently the petitioner admits that shoe manufacturers can get their other machines from other shoe machinery manufacturers.

But they can also get their lasting machines. Thus the manager of the R. H. Long Machinery Company testified that the Company was ready to furnish the trade with twenty-five lasting machines (R. Vol. 1, p. 345, lines 41–42). The Company would, of course, build more as fast as they were needed. The Haverhill Company is ready to furnish lasting machines manufactured by Gimson & Co. and the Standard Rotary Co. of England (R. Vol. 1, p. 300, lines 40–42). Mr. Webster of that Company testified:—

> "It takes about 20 to 25 days to get them from England. I am in hopes to improve on that" (R. Vol. 1, pp. 300–301, lines 45, 1–2).

Any machine shop can build for any shoe manufacturer who desires them lasting machines of the character put out in 1899 when the United Company was formed on which the patents have expired. One of the reasons that it is difficult, as shown by the record, to check up the exact number of machines placed on the market by competitors and also the exact number of competitors, is because almost any small machine shop can turn out shoe machinery which it is possible to use on shoes. No large plant or factory is required and the ordinary machine tools are practically all that is necessary.

In addition to the American companies furnishing machines there are a considerable number of foreign companies which furnish full lines of machines. (See main brief, p. 565.) The petitioner endeavors to belittle these foreign concerns because it says that they have not done business in this country to any appreciable extent (Petitioner's Brief, p. 135). The petitioner, however, does not and cannot refute the fact that there are large foreign

manufacturers who do furnish complete lines of machines, that they would be glad to furnish their machines to any shoe manufacturer in this country who desired to use them, and that any shoe manufacturer in this country can order machines from them if he wishes.

The record shows that an average of sixty-two new shoe manufacturers engage in business each year and that an average of twenty-two new firms succeed old firms. (See Defs.' Ex. 223, R. Vol. 5, p. 390.) These shoe manufacturers are not in any way under obligations to the United Company. They are free to obtain their machines from Long, from the Haverhill Company, or from Hamel, who are all, as they testified, anxious to furnish them with full lines of machines. They can obtain their machines from any one of several large shoe machinery manufacturers abroad. If they do not choose to do so, it is clearly because they want the best machines on the best terms and with the best service, and, therefore, prefer to take their machines from the United Company.

Respectfully submitted,

FREDERICK P. FISH,
CHARLES F. CHOATE, JR.,
MALCOLM DONALD,

Counsel for Appellees.

APPENDIX I.

COMMENTS ON APPENDIX A TO PETITIONER'S BRIEF BEING A CHART PURPORTING TO SHOW THE EFFECT OF THE EXCLUSIVE USE AND "TYING" CLAUSES.

The Brief for the United States, at page 166, states:—

> "A chart illustrative of the practical effect of the tying clauses in these restrictive leases is submitted herewith as Appendix A. This chart has been criticised by the defendants, but all the criticisms are trivial and none of them is based upon fact. It will be observed that this chart relates to provisions in 'restrictive' leases and not to leases generally, and it will be found that every statement made in it is supported by the provisions of the leases to which reference is made therein."

Notwithstanding the statements of the United States, the chart does not correctly represent the situation, but is inaccurate and misleading. As a graphic it does not correctly set forth the situation, and a great many of the statements made therein are not supported by the provisions of the leases to which reference is made. The chart, upon its face, purports to cover only what counsel for the United States are pleased to call the restrictive forms of leases. It, therefore, admittedly sets forth but a part of the whole story, and even as to that part presents a picture which is not substantiated by the leases themselves. Appendix A

is an exact copy of the chart in the Brief for the United States filed in the District Court, and is substantially a copy of Exhibit 23 attached to the petition, which it was agreed should be disregarded, as the United States did not claim to have proved it.

Some of the respects in which the chart is inaccurate and misleading are as follows:—

1. It attempts to combine in the one chart machines used in the manufacture of different kinds of shoes, *e.g.*, welts, turns, McKays, metallic fastened, pegged; and where such machines are adapted to be used upon different kinds of footwear, and the leases accordingly being general forms contain some restrictions which apply to one class of footwear and other restrictions which apply to other classes of footwear, the chart by indicating all of these ties in the one graphic has the effect of indicating a multiplication of tying which would never exist in any factory as a practical matter. For example, the heeling machines are shown as tied to the Pegging Machine Department and to the Goodyear Department where as a matter of fact this tie would simply be to the Pegging Machine Department upon pegged shoes and to two machines of the Goodyear Department upon welt shoes, and to but one machine of the Goodyear Department upon turn shoes.

2. The chart indicates a requirement in many instances that the lessee "must use exclusively lessor's machines for certain operations," whereas the requirement is not in any such positive form, but is simply a reservation of the right to the lessor, if the lessee does not elect so to use the lessor's machines for all of his work of that kind, to have the option to terminate its leases of machines of that particular kind.

3. The effect of the tying is made to appear greater than it really is by combining in various of the tables various machines for performing the same or similar operation only one of which would be used in any one particular case, or in showing in the same table different forms of lease for the same machine. For example, in Table 6, there is the enumeration of several different types of lasting machine; in Table 2 the list includes several forms of heel attaching machines and several forms of heel trimmers; in Table 3 there are two kinds of eyeletting machine listed; in Table 4 there are different forms of lease for the same machines of the General Department; in Table 8 there are different forms of lease for the same Goodyear machines. The arrows in the chart would appear to indicate that all the machines in one group are tied to all of the machines in another group, whereas the tie would actually exist, as a practical matter, only between certain se'ected machines of one group and certain selected machines of the other group.

The following are some of the instances of inaccurate or misleading indications in the various tables:—

Table 1. Pulling-over System.

1. The arrow indicates a tie to the machines of the Pulling-Over System from Table 6 (Lasting Machine Department). This Lasting Machine Department Table 6 shows seven sub-divisions and only one of these sub-divisions, *i.e.*, the No. 5 laster, has any tie whatever to the Pulling-Over System and that to the pulling-over machine only.

2. This table indicates "must use exclusively lessor's machines." The lease contains no such provision.

3. A tie is shown from this table to the machines of Table 6 (Lasting Machine Department). Table 6 includes not only several forms of lasting machine, but also includes tacking machines and the Ensign lacing machine, to which there is no tie.

4. A tie is shown from this table to the machines in Table 8 (Goodyear Department). Such tie, so far as it exists, is to the Goodyear welting and stitching machines only. Table 8 shows leases not only for the welting and stitching machines, but also includes the Goodyear auxiliary machines and the Economy insole reinforcing set and the Gem insole set. There is no tie from the Pulling-Over System under any form of lease or from any other department to either the Goodyear auxiliary machines or to the Economy set or the Gem set.

Table 2. Heeling Machine Department.

1. A tie is shown from this table to Table 6 (Lasting Machine Department). Such tie as exists is for the lasting operation only, while Table 6 includes not only several forms of lasting machines, but also includes tacking machines and Ensign lacing machines, to which there is no tie.

2. A tie is shown from this table to Table 8 (Goodyear Department). Such tie as exists is to the welting and stitching machines only, while Table 8 includes leases which cover not only the welter and stitcher, but also Goodyear auxiliary machines, Economy and Gem machines, to which there is no tie.

3. This table states that the lessee "must use exclusively lessor's machines" for certain work. There is no such provision.

Table 3. Eyeletting Department.

1. This table also shows a tie to Table 6 (Lasting Machine Department). Such tie as exists is to the lasting operation only, while Table 6 includes machines for other operations to which there is no tie.

2. A tie is shown from this table to Table 8 (Goodyear Department). Such tie as exists is for the welting and stitching machines only, while the table includes leases not only for these machines, but for other machines as well to which there is no tie. (See above.)

Table 4. General Department.

1. This table indicates two forms of lease for General Department machines, a lease for McKay sewing machines, a lease for Ideal clicking machines, and a lease for the Miller twin shoe treeing machine. The arrows indicate a tie to Table 5 (Pegging Machine Department), Table 6 (Lasting Machine Department), Table 7 (Metallic Department), and Table 8 (Goodyear Department). Only the first two of the leases set forth in Table 4 (which are alternative forms) and the lease for the Miller treeing machine tie in this way, and the indicated ties to Table 6 (Lasting Machine Department) and Table 8 (Goodyear Department) are open to the same criticisms as above indicated in respect to Tables 1, 2, and 3.

2. This table indicates that the lessor's clicking machines are to be used exclusively. There is no such requirement.

3. This table indicates that royalty is to be paid "for using dies not furnished by lessor." This is not true. The royalty is paid for the use of the machine.

Table 5. Pegging Machine Department.

1. The arrows from the Pulling-Over, Heeling, Eyeletting and General Departments indicate ties to the Pegging Machine Department, also ties to the Goodyear Department. Of course the tie to the Pegging Machine Department would apply only to pegged shoes, and to the Goodyear Department only to two machines for welts and one machine for turns.

2. A tie is indicated by the arrow from the Pegging Machine Department to Table 6 (Lasting Machine Department). Such tie as exists is to the lasting operation only, whereas Table 6 includes other operations, as indicated above.

3. Table 5 indicates that the lessee "must use exclusively lessor's pegging machines." There is no such provision.

Table 6. Lasting Machine Department.

1. A tie is shown from this table to Table 1 (Pulling-Over System). As a matter of fact, only one of the several machines included in Table 6 is under any form of lease tied to *any* machines of the Pulling-Over System. That one is No. 5 lasting machine on the restricted form of lease only, and is tied to the pulling-over machine alone and not to any other machines of the Pulling-Over Department.

2. Various ties are shown to this table from other tables which misrepresent the actual conditions as set forth in various other tables. (See comments on other tables.)

3. A tie is shown from this department to Table 8 (Goodyear Department). Such ties as exist are to the welting and stitching machines only,—not to the other machines set forth in Table 8.

4. A tie is shown from this department to Table 7 (Metallic Department). Such tie exists only as to certain (not all) of the machines included in Table 6, and then only under certain alternative forms of lease.

5. A tie is shown from this department to Table 2 (Heeling Department). As a matter of fact only one lasting machine (and that an old and obsolete machine, several years ago superseded by later and improved machines) ties to the heeling machine.

6. The statement that the lessee "must use exclusively lessor's lasting machinery and tacking mechanisms" is not correct. There is no such provision.

7. The Boston lasting machine is not a lasting machine at all, but merely, as appears from the record, a *tacking* device for tacking on rands and similar parts, and the machine is specifically leased for use "other than for lasting."

Table 7. Metallic Department.

1. The form of lease set forth in Exhibit 30 is an early form, and the "Schedule of Machines" contains different types of machines for performing the same operations. There were really only five or six distinct operations and the current form of metallic lease enumerates only the current forms of machines—some six machines. Ties are shown to this Table 7 (Metallic Department) from various other departments, and it appears, upon the face of the table, as though the tie was to a large number of machines of the Metallic Department. As a matter of fact, no lessee would have anything like that number of different types of metallic machines.

2. A tie is shown from this machinery to Table 6 (Lasting Machine Department) and to Table 8 (Goodyear Department). The ties are only to the lasting and to the welting and stitching operations, not to the other machines referred to either in Table 6 or Table 8.

3. Table 7 states that the lessee "must use exclusively lessor's metallic machines." That is not a correct statement.

Table 8. Goodyear Department.

1. This table includes two forms of lease for the Goodyear welting and stitching machines, and also a lease for the auxiliary machines of the Goodyear Department. This table also includes Economy insole set and Gem set. Although various other tables are shown as tied to Table 8, it is the fact that no lease of the United Company ties to any of the auxiliary machines of the Goodyear Department, to the Economy set or to the Gem set.

2. This table states that the lessee "must use exclusively lessor's machines" for certain operations. There is no such provision in the leases.

APPENDIX II.

COMMENT ON APPENDIX C TO PETITIONER'S BRIEF PURPORTING TO GIVE A SYNOPSIS OF THE LEASES SHOWING TYING CLAUSES.

The ambiguities and half-truths which cloud the brief throughout extend also to Appendix C. For example—note the title to the Appendix, the contents, and the statement to be found on page 160 of the Brief for the United States.

Furthermore, in summarizing the several leases enumerated in Appendix C the United States has deemed it advisable, as to some leases, to refer to clauses which same clauses, as to other leases, it has apparently considered of no importance and has therefore omitted.

Leases have been summarized which, as appears from the record, have long since ceased to be active, either because the machines covered thereby have been superseded by other and improved types, as in the case of Chase, Ideal, and McKay & Copeland lasting machines, or by later leases, as in the case of the heeling machines, Goodyear full set and other leases.

Inaccuracies and misstatements occur throughout so that so far as serving any useful purpose Appendix C might well have been dispensed with, and it is respectfully suggested that the Court will save time and obtain an accurate knowledge of the provisions of the leases only by a careful examination of the instruments themselves.

The following are some of the instances of inaccurate and misleading statements:—

1. Lasting Machines.

(*a*) Consolidated Hand Method.

i. Non-Initial Payment.

Attention is not called to the fact that Exhibit 16 is for a lease covering the machine for use in the manufacture of McKay sewed or metallic fastened footwear; that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

ii. Attention is not called to the fact that Exhibit 14 is for a machine adapted for lasting McKay sewed footwear; that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee; that there is no obligation on the part of the lessee to pay any amount of "minimum royalty"; that the provision in the lease is that if the machine does not earn in any calendar year royalty amounting to $75 per annum the lessor may terminate, but only upon repaying to the lessee a part of the lease premium theretofore paid. It is not obligatory upon the lessor to exercise this right nor can the lessor exercise its right without first making payment.

(*b*) Chase Lasting Machine.

It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee; that the minimum royalty is abated in respect to each month the lessee's factory is idle.

(*c*) McKay & Copeland Machine.

It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee; it is a misstatement to say that there is a minimum royalty of $125 per annum. There is no obligation on the part of the lessee to make this

payment. The provision is merely a reservation to the lessor that if the machine shall not earn $125 per annum the lessor may terminate the lease, but must first repay to the lessee one-third of the lease premium theretofore paid. There is no requirement that the lessor exercise this option.

(*d*) Ideal Lasting Machine.

It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee; it is a misstatement to say that there is a minimum royalty of $75 per annum. There is no such obligation on the part of the lessee. The provision is the same as in the McKay and Copeland lease *supra*.

(*e*) No. 5 Lasting Machine.

i. It misstates the date the lease was adopted. The record shows that the lease was adopted "six or seven" years prior to 1914, the time of Mr. Donham's testimony, which would make the adoption date 1907 or 1908. It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

ii. It omits to state the adoption date which appears from the record was the same as in the case of *i supra*. It fails to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

2. Welt and Turn Sewing Machines and Outsole Stitching Machines and Auxiliaries.

i. It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee. It misstates the machines to which it says the exclusive use clause applies. There is no such machine as the "welt stitching machine." Undoubtedly what is meant is welt-

ing and outsole stitching machines. It fails to make clear the extent claimed for the prohibitive clause. It states that the clause applies "to the same machines," but it leaves it open to argument that the word "same" includes not only welt and turn sewing and outsole stitching machines, but also the auxiliaries. The note is inaccurate and misleading in its statement that the lease provides for royalties to the defendants "upon shoes made upon machines supplied by competitors of the defendants." There is no such provision.

In referring to Exhibit 25, the lease for the Goodyear auxiliary machines only, it omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

There is no reference in the clause to inseaming machinery.

The statement with reference to the prohibitive clause is open to the same criticism as stated above. It is inaccurate in the statement that the lease provides for an annual rental amounting to about $184 per annum. The lease covers many different machines and several machines for the same operations. In no factory would a lessee have all of the machines. The amount stated was apparently determined by adding Column II of the Schedule of Machines. The annual rental is the amount set opposite each machine varying from $1 to $35 per annum, according to the machine leased.

The note conveys a wrong impression. There is no restriction in the lease to the use of the auxiliaries upon welted footwear operated upon by independent welt lasting or other machines used in the manufacture of welt shoes. The only restriction is to footwear operated upon by the United Company's welt sewing, sole stitching, and turn sewing machines.

ii. It omits as to Exhibit 23 to call attention to the fact that the exclusive use clause is merely a reservation of a

right to the lessor and not an obligation on the part of the lessee.

The prohibitive clause is open to the same criticism as stated above, and the same statements apply to Exhibit 26.

The note is inaccurate in the statement that the lessee "must agree" that he will not use "at any time" in his factory independent welt sewing or outsole stitching machines. There is no such provision in the lease.

3. Heeling Machines.

i. Although Appendix D states that Exhibit 27 contains both full capacity and additional machinery clauses, no reference to the same is made therein. It inaccurately states the minimum royalty. The lease does provide for the payment of minimum royalty to the lessor dependent upon the number and kinds of machines leased. The particular executed lease, of which Exhibit 27 is a copy, contained machines calling for a minimum royalty of $230 per annum. This is not the minimum royalty for any one machine as is the inference to be drawn from the statement in Appendix C.

With reference to Exhibit 28 the Appendix omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

The statement in the note is inaccurate and misleading and the occasion for the preparation of Exhibit 28 was fully and accurately stated by Mr. Winslow (R. Vol. 1, p. 546, lines 26 *et seq.*).

4. Metallic Fastening Machines.

i. Although it has been considered of importance to state the royalty with reference to Exhibit 30, apparently the same importance was not attached to Exhibit 29, as the synopsis contains no reference thereto.

It inaccurately states, with reference to Exhibit 30,

that the royalty is the purchase of not less than four hundred pounds of material per annum in that it omits to call attention to the fact that the lease provides for a deduction of thirty-three pounds for every month the lessee's factory may be idle.

With reference to Exhibit 31 it is misleading in the statement that the lease contains a clause permitting the removal of machines deemed by the lessor unnecessary for the lessee's business. This is not a correct statement. The provision is that, in case in any period of three *consecutive* months the lessee shall fail to use the machinery to at least three-quarters of a fair day's work, the lessee shall return the machinery not needed.

The provision for payment for material is not correctly quoted. The word "the" has been omitted before the word "prices" in the second line, the word "required" has been substituted for "established" in the same line, and in the sixth and eighth lines the word "or" has been changed to "and." Other dissimilarities of a minor character will also be noted.

The statement as to provision for minimum use of four hundred pounds of material per annum is inaccurate in that it omits to make any reference to the deduction of thirty-three pounds for every month that the lessee's factory is idle.

With reference to Exhibits 32, 33, 34, and 35, criticisms herein made with respect to other metallic fastening machine leases apply in so far as the United States alleges that such Exhibits are similar to the other metallic fastening machine Exhibits.

5. Pegging Machine.

i. It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee. It is misleading in the statement that the minimum royalty is $10

per month in that it omits to state that there is no minimum royalty for each month that the factory remains idle.

ii. It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

6. Pulling-over Machines.

i. It is misleading in the statement that the minimum royalty is $15 per month in that it omits to call attention to the fact that there is no minimum royalty for any month in respect to which the factory of the lessee is idle.

In respect to Exhibit 37 it omits to call attention to the fact that this lease has long been superseded by a later form.

It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

It is inaccurate in its statement with reference to the additional machines clause. The clause does not have the effect stated in the appendix.

It inaccurately states the minimum royalty in that it fails to call attention to the fact that there is no minimum royalty in any month in which the lessee's factory may be wholly idle but not more than ten months in any twelve consecutive months. The same criticisms apply to Defendants' Exhibit 345.

With respect to Exhibit 38 it omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

ii. It omits to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

It inaccurately states the minimum royalty in that it fails to call attention to the fact that in any month in which

the lessee's factory may be idle no minimum royalty is required to be paid, but that such reduction shall not be made in respect to more than ten months out of any twelve consecutive months.

The note confuses Exhibit 38 and 39. It is not correct that the lease calls for a further payment of one-quarter cent for the use of each of the six or eight auxiliary machines. No lease would cover all these machines. Some are for use on one type of shoe and some on another and some duplicate the operation of others. At the most, but two or three of the auxiliaries would be used, so that in no case would the total payment be two cents, as stated in the Appendix.

The provision of the lease is not that the royalty shall not be more than three-quarters cent per pair. The provision is that the lessee shall pay one-half cent gross (one-quarter cent net) with respect to each pair of shoes pulled over plus one-quarter cent for each auxiliary machine which may be used (one-eighth cent net—having in mind that but two or three auxiliaries can be used) with the proviso that under certain conditions the maximum royalty shall not exceed three-quarters cent gross (three-eighths cent net) upon *all* shoes *lasted; i.e.,* factory output. It may very well be that the lessee would prefer to pay according to the one-quarter and one-eighth cent provisions rather than according to the three-eighths cent provision; as, for example, the lessee might last many more shoes than he would pull over by machinery.

The note is inaccurate in the statement that "their price for it is three-quarter cent a pair to those who aid them to obtain a monopoly in lasting machines and two cents a pair to those who do not." This is not the fact. The royalty is set forth in the lease and is as just stated. The lessee has the option, under certain conditions, as to which rate he will pay.

The note is further inaccurate in the statement that the

lessee could not have in his factory a competing pulling-over machine. There is no such obligation on the part of the lessee. He may have any and as many other pulling-over machines as he desires.

The note, with reference to Exhibits 39, is inaccurate in stating that the lessee must pay an initial payment amounting to "about the value of the machine." There is no evidence in the record as to the value of these machines and the United States has no ground upon which it can base its assumption that the initial payment in any way represents the value of the machine.

The note is further inaccurate in saying that the royalty is one cent a pair straight. The royalty is one cent per pair gross (one-half cent net) for the use of all the machines of the Pulling-Over System. The statement "The net result is for lasting and pulling over under Exhibit 39, the so-called Independent lease, the lessee has to pay one cent a pair while under Exhibit 38 he pays only three-eighths cent a pair" is grossly inaccurate and misleading. In the first place, the comparison is between a gross royalty and a net royalty and in the second place, it clearly appears from an examination of the leases that the three-eighths cent provision under Exhibit 38 is three-eighths cent *in excess* of the *total* lasting royalty.

7. General Department Machines.

The statement with reference to Exhibit 40 that the lease contains the "right to terminate all leases clause" is inaccurate. There is no such clause in the lease.

The statement in the note to the effect that the only charge made is payment of the lease premium except that the lessee was bound to purchase repair parts, creates the inference that the provision as to repair parts is peculiar to this lease and Exhibit 41 only, and that it is inserted for the purpose of obtaining additional revenue. Such is not

the fact. The duplicate parts clause in the General Department leases is, as in the other leases, merely a protection to the lessor, the owner of the machinery, in order that the machinery may not become out of order or be permitted to deteriorate by reason of the insertion of improper or poorly-made duplicate parts. Furthermore, it is not true that this lease was used as an inducement to manufacturers to take other machines. The lessee had the option to take his machines on lease or to purchase them outright, and he exercised his option according as his business judgment indicated.

The same criticism applies to Exhibit 41 as to Exhibit 40.

8. Eyeletting Machines.

i. Although Appendix D includes Exhibit 43 as one of the forms of lease containing the full capacity clause, the United States has omitted to enumerate the clause in the Appendix C. This is inaccurate.

ii. This Exhibit, like Exhibit 43, contains a full capacity clause and the exhibit is referred to in Appendix D as containing the full capacity clause. The omission of the clause from Appendix C is inaccurate.

The note that the purchase of eyelets is *further* compensation is inaccurate. An examination of the leases clearly indicates that it is the sole means of compensation for the use of the machine.

9. Clicking Machines.

The United States has omitted to call attention to the fact that the exclusive use clause is merely a reservation of a right to the lessor and not an obligation on the part of the lessee.

The note is inaccurate and misleading throughout. For example, it states that "it also provides that one cent per pair is to be paid for footwear lasted on lessor's ma-

chines." There is no such provision in the lease. The machine having been developed by the United Company there was, of course, no obligation on the part of the United Company to put the machine out other than upon a revenue producing basis. It was considered that if the machine were used in the manufacture of footwear subsequently operated upon by lasting machines of the United Company and in respect to which the United Company received its lasting machine royalty (or subsequently operated upon by its welting or sole stitching machinery in respect to which it was receiving a royalty) the United Company could, as a business proposition, accept the compensation from the sale of dies—otherwise it would receive its compensation direct.

The note is inaccurate in stating that the lessee who uses independent lasting or welting or stitching machines is penalized. The royalty provided is a charge for the use of the machine and it is not correct to state that its true purpose and effect is as a destroyer of competition.

APPENDIX III.

COMMENT ON APPENDIX D TO PETITIONER'S BRIEF PURPORTING TO GIVE A RÉSUMÉ OF THE LEASES IN WHICH THE VARIOUS CLAUSES OBJECTED TO APPEAR.

The inconsistency as to the purpose of Appendix C persists in Appendix D. In neither the title nor in the brief is there agreement as to the contents and purpose of the Appendix. See page 160 (third and sixth sentences of the first paragraph) and page 351.

Appendix D is almost word for word a copy of the table appearing at pages 134 to 146, both inclusive, in the Brief for the United States in the District Court and was therefore before the Judges of that Court.

It is inaccurate and misleading and should not be relied upon even should this Court be able to determine just what it is intended to show.

Some of the inaccuracies and misstatements are the following:—

In "Second" the statement "all the leases contain the 'right to terminate all leases' clause" is inaccurate.

In "Third" (16), Exhibit 31 is not equivalent to an initial payment lease for metallic machines, and it is inaccurate to so state. The lease does not call for any initial payment.

"Fourth" is inaccurate in that it fails to make clear that the Exhibits were not active current leases, but is intended to create the inference to the contrary. It does not call

ıtion to the uncontradicted evidence that the additional
ıines clause had been abandoned as early as 1907.

Fifth" is inaccurate and misleading in that it fails to
that the exclusive use clause is merely a reservation
right to the lessor and not an obligation on the part of
lessee.

ıe article contains inaccurate statements in divisions
1, 12 and 13 referring to Exhibits 23, 24, 26 and 25 re-
tively, in that the statement occurs that the clause
uires" the exclusive use of certain lessor's machines or
the clause "excludes" use of all but certain lessor's
hines.

Sixth" is misleading in that it fails to call attention
ıe fact that the machines referred to are for operation
different kinds of shoes and creates the wrong infer-
that the clause has a much broader effect than it
d, as a matter of fact, have in any given factory.

(7), Exhibit 23, of the same article, the statement is
e that "this lease does not tie the leased machines to
r than Goodyear machines." It might be inferred
this that there was a tie to *all* Goodyear machines, and
ıerefore misleading. In so far as the lease covers aux-
y machines, the use of such machines is only restricted
Goodyear welt sewing and sole stitching machines on
footwear and to turn sewing machines on turn foot-
r. The auxiliaries are not restricted to use with each
r or with any machines in any other department. In
ar as the lease covers Goodyear turn sewing machines
e is no restriction as to the use, and in so far as the lease
ers Goodyear welt sewing and sole stitching machines
restriction is only to Goodyear sole stitching or Good-
welt sewing machines respectively.

APPENDIX IV.

COMMENTS ON STATEMENTS BY UNITED STATES AS TO THE VARIOUS ACQUISITIONS.

Goddu Sons Metal Fastening Company (Brief for the United States, pp. 62–65).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 3–7.)*

The Brief for the United States says (p. 62) that "The Goddu Company was engaged in *perfecting and manufacturing* nailing machines, slugging machines, tacking machines and standard screw machines—all important metallic fastening machines" (italics ours). This statement is not supported by the record. There is no testimony even suggesting that the Goddu Company was either "perfecting" or "manufacturing" any machines whatever.

The United States further says (p. 62) that the United Company "was putting out machines for doing the work for which the Goddu machines were *adapted*" (italics ours); and in support of the statement Mr. Howard's testimony is cited (R. Vol. 1, p. 42, line 1). What Mr. Howard actually said was:—

> "The United Company was putting out *commercial machines* for doing the work for which the Goddu

(* NOTE.—The record references for the statements made in the following discussions, where not given, will be found in the statements in the Appendix to Brief for Appellees, to which reference is made in connection with each discussion.)

> Company machines were *intended*" (italics ours) (R. Vol. 1, p. 42, lines 1–3).

The record clearly shows that the Goddu machines were in fact not practically *adapted* for doing any work.

After quoting (inaccurately) a portion of the finding of the District Court, the Brief for the United States (pp. 62–63) makes the statement: "In any event, it appeared that the very thing the Goddus were doing was the perfection by all necessary reconstruction of their machines."

There is not the slightest evidence that the Goddu Company was making any effort whatever to perfect or to reconstruct its machines.

The Brief for the United States says (p. 62) that "the Goddu machines, according to Winslow, were not yet in a condition to be placed in the hands of manufacturers for continuous operation 'but they were in a state of development where some of them could have been, without extensive changes, made operative.'"

The context gives an entirely different impression from that which the United States aims to give. Mr. Winslow testified:—

> "Their machines were in a state of development and *none* of them, to the best of my judgment, was in condition to be placed in the hands of manufacturers for continuous operation. As I knew the situation, they were in a state of development where *some* none?] of them could have been, without extensive changes, made operative" (italics ours) (R. Vol. 1, p. 436, lines 28–33).

This quotation is copied verbatim from the District Court record. In the light of the first sentence it seems

obvious that in the second sentence, quoted in part by the United States (p. 62), the reporter substituted *some* for *none*, the word which Mr. Winslow used in the preceding sentence.

The Brief for the United States entirely ignores the uncontroverted testimony of defendants' patent expert, Mr. Howard, who qualified also as a practical expert (R. Vol. 2, pp. 2239–2241) and who spent a week in 1898 in examining the machines of the Goddu Company, to the effect that the Goddu machines were "entirely impracticable." Mr. Howard stated in detail the reasons for his conclusions, and testified that remedying the defects

> "would have involved *entire reconstruction* of the machines, and *the machines so reconstructed would have been entirely different* from the machines as actually built by the Goddu Company" (italics ours) (R. Vol. 2, p. 2099).

It is submitted that the District Court was entirely justified in the finding, characterized in the Brief for the United States (p. 62) as "the *contention* of one of the judges below" (italics ours) which (correctly quoted) reads:—

> "nor is the evidence sufficient for a belief that without reconstruction, radical in character, anyone could have used them as competing machines" (Dodge, J., R. Vol. 1, p. 1140).

The District Court's finding is quoted in full in the Appendix to main brief (p. 6).

The Brief for the United States says (p. 63) that the reason given by Mr. Winslow for this acquisition "was

the disposal of patent litigation to which the United Company had succeeded as *plaintiffs*" (italics theirs). The United States ignores the testimony (Appendix to main brief, p. 4) showing that some time before the United Company was formed a suit had been brought by the McKay Company on Louis Goddu's contracts against Louis Goddu, his sons, and Albert Van Wagenen to compel a transfer of the Goddu Sons' patents to the McKay Company.

Louis Goddu, father of the "Goddu sons," had been employed as an inventor for many years by predecessors of the McKay Shoe Machinery Company; he had invented practically all of the metallic machines of that company and had been paid continuously for his exclusive services. Several years before the United Company was formed Louis Goddu, all his sons, and Albert Van Wagenen all left the employ of the McKay Company and started the Goddu Sons enterprise, and the pending suit charged that they conspired to have Louis Goddu invent metallic machines, communicate such inventions to his sons, permit them to apply for patents and transfer those patents to the Goddu Sons Company. That suit had been vigorously contested and the claims of the McKay Company had been developed and substantiated before the acquisition. The Brief for the United States ignores this litigation and refers only to the infringement litigation. It asserts (p. 63): "The disposal of such litigation could hardly be worth $150,000 to the defendants. The removal of an able competitor might well have been worth that amount." In view, however, of the large amount of litigation shown to have been both existing and prospective, and the very great expense which would undoubtedly have been involved as well as the great amount of time

which would have been required of Mr. Winslow and his associates during the period when the United Company was just getting started, it is submitted that the consideration, for the objects stated, was not unreasonable. Winslow testified that he appreciated the time which would be required and the difficulties which would be encountered in establishing by the pending suit that the Goddu Sons' patents belonged to the United Company. He said he "had had considerable experience in that sort of litigation" and that

> "That arrangement was entered into on my part because of the fact that I very much desired to start the United Company free from all serious litigation" (R. Vol. 1, p. 435, lines 39–41; p. 437, lines 3–7).

The United States lays great stress (pp. 63–64) upon the testimony of Mrs. Converse, the daughter of Albert Van Wagenen (R. Vol. 1, p. 311, lines 32–40; p. 312, lines 1–13), who was associated with Louis Goddu and his sons in the Goddu Sons enterprise and who was one of the defendants in the pending suit which charged a conspiracy, as above explained (*supra*, p. 183).

It should be noted, however, that in the statement which Mrs. Converse testified that Mr. Winslow made he said that the Goddu Company "had no business and no machines . . . they couldn't raise money to go on with the business, and no manufacturers to take them" (Brief for the United States, p. 64).

Mrs. Converse also testified:—

> "He said to me that they hadn't anything, they weren't doing any business, they weren't a factor at all" (R. Vol. 1, p. 312, lines 40–42).

Obviously inconsistent with these statements is Mrs. Converse's testimony that Mr. Winslow said that he bought the Goddu Company to get rid of competition. And Mr. Winslow in his testimony specifically denied that he made the purchase to get rid of any competition, and also expressly denied that he made such a statement to Mrs. Converse. He testified:—

> "*Q.* Did you acquire the Goddu Sons Company for the sake of getting rid of any competition?
>
> "*A.* I did not.
>
> "I never stated to Mrs. Converse that we acquired the Goddu Sons Company for the sake of getting rid of competition" (R. Vol. 1, p. 437, lines 8–12).

With reference to the statement by the United States that Mrs. Converse's testimony was "supported by a copy of a contemporaneous memorandum" (p. 64), she testified that the memorandum was made "*about 1900 or 1901, I think*" (italics ours), and she also testified:—

> "I made memoranda of my conversation with Mr. Winslow while he was out of the room, *which I afterwards destroyed*" (italics ours) (R. Vol. 1, p. 312, lines 30–32; p. 313, lines 13–14).

It is submitted that in the light of Mrs. Converse's complete testimony her statement as to the remark of Mr. Winslow in regard to the purpose of eliminating competition is entitled to no weight; and, as pointed out, Mr. Winslow emphatically denied both that he made any such statement and that he had any such purpose.

The statements in the Brief for the United States (p. 64) that "the Goddu Company ceased to do business" and

that "by this initial acquisition the prospective opportunity of shoe manufacturers to obtain metallic machines elsewhere than from the defendants was removed" (p. 64) are not supported or justified by the record. The Goddu Company did not *cease* to do business because they were not doing any and never had done any. "The prospective opportunity of shoe manufacturers to obtain metallic machines elsewhere than from the defendants" was not removed because there was no such prospective opportunity. The uncontroverted evidence which we have reviewed and which is set forth in more detail in the Appendix (pp. 3–7) shows conclusively that the Goddu machines were entirely unfit for commercial use and that to have adapted them for commercial use would have required entire reconstruction, so radical that if it had been effected the machines would have been entirely different.

We respectfully submit, therefore, that no reason has been shown why this Court should not accept as conclusive the finding of the District Court:—

> "the metallic fastening machines acquired by purchase of a controlling interest in the company were none of them in the hands of users; their then state of development does not appear to have been such as made them capable of commercial use, whatever the merit of the inventive ideas they sought to embody; nor is the evidence sufficient for a belief that without reconstruction, radical in character, anyone could have used them as competing machines" (Dodge, J., R. Vol. 1, p. 1140).

Winkley and Phillips (Brief for the United States, p. 65).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 20–21.)

The Brief for the United States says (p. 65) that the United Company acquired from Winkley and Phillips "their inventions and improvements relating to 'sole leveling machines,'" and further says that defendants' witness Howard "testified that at the time of acquiring the above inventions or improvements the United Company was engaged in putting out sole-leveling machines, but that they were not of the same type as those covered by the inventions and improvements acquired."

The United States aims to give the impression that the only difference between the acquired machine and that which the United Company had before was that they were "*not of the same type*" (italics ours); that, however, they could be used for the same work; and that accordingly the United Company by this transaction acquired a potentially competing machine. With this purpose it has distorted Mr. Howard's testimony.

What Mr. Howard actually said was:—

> "Prior to the acquisition of these patents from Winkley and Phillips the United Company *was not engaged in putting out sole leveling machines for McKay work. It was putting out leveling machines for Goodyear shoes*, known among the trade as the Goodyear automatic sole leveling machine" (italics ours) (R. Vol. 1, p. 48, lines 9–13).

The United States also ignores the testimony which explains the practical reasons why McKay shoes and Good-

year shoes require entirely different kinds of leveling machines, as set forth in the Appendix to main brief (p. 21).

The foregoing, in connection with other facts set forth in the Appendix to main brief (pp. 20–21), shows that by this transaction the United Company was acquiring, not a competing machine, but a machine for performing work which could not be performed by the machine which the United Company had.

Swain-Fuller Manufacturing Company (Brief for the United States, p. 66).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 29–30.)

The Brief for the United States says (p. 66) that Mr. Howard testified that the "Star leveling machine" acquired in this transaction was "used *practically* exclusively on turn shoes" (italics ours) and that "the United Company was manufacturing and putting out a leveling machine, but *he claimed* that the United Company's machine was not adapted for leveling turn shoes" (italics ours). The United States apparently desires to give the impression that the Star leveling machine could be used on other work than turn shoes and also that Mr. Howard merely made a claim that the United Company's machine was not adapted for doing the work of the acquired machine.

What Mr. Howard said was that the Swain-Fuller Company was putting out "the Star leveling machine for turn shoes," that

> "the Star machine *could not be used* with success or with commercial profit on other work" (italics ours) (R. Vol. 1, p. 53, lines 14–16, 21–23),

and that

"At this time the United Company was not putting out turn leveling machines, and *it would be impossible to use any machine that the United Company then had on turn shoes*" (italics ours) (R. Vol. 1, p. 53, lines 19–21).

The United States ignores other testimony to the same effect, for example:—

"The Star machine was a very light machine and was *adapted and used only for leveling turn shoes*, which, owing to the fact that they have but one sole, require and will stand a less degree of pressure than other types of shoes" (italics ours) (Howard, R. Vol. 2, p. 2063, Int. 1533).

Again, the United States refers (p. 66) to Mr. Winslow's testimony that by this transaction the United Company also acquired a "Single sole-molding" machine, but it neglects to quote Mr. Winslow's statement in the next paragraph and on the same page of the record that

"Neither of these machines was in competition with any machines then being made by the United Company" (Defs.' Ex. 231, R. Vol. 5, p. 455).

Carver Cotton Gin Company (Brief for the United States, pp. 66–67).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 68–71.)

The United States says (p. 67) that "Howard testified that among the machines obtained from the Carver Cotton Gin Company were the Acme leveling machine, a vamp skiving machine, and a machine known as the Davis leather-board skiver," and that at the same time "the United

Company was putting out the Goodyear automatic leveler and the Emerson skiving machines, but that the acquired machine did not do the work *in the same way.* Even though this be admitted *the result accomplished was the same"* (italics ours).

The United States clearly intends to have it understood that at the time of this acquisition the United Company had machines which, while they did not do the work in the same way, would accomplish the same results.

This is entirely contrary to the facts. Mr. Howard testified that the United Company had no machines for performing the operations performed by any of these Carver machines.

Accordingly, instead of acquiring competing machines which would accomplish the same results although not in the same way, as alleged by the United States, by this acquisition the United Company was merely extending its line by adding machines which performed operations for which it previously had no machines.

At the end of its discussion of the acquisition of the Carver Cotton Gin Company the United States says (p. 67):—

> "By these three acquisitions, the defendants acquired control of a machine needed in manufacturing all kinds of shoes. The leveling machine used in welt shoes is *now* put out only as an auxiliary machine. (Dft.'s Ex. 231, V, 457.) It can not be obtained for use with welt machinery supplied by any competitor of the defendants. (R. I, 468, l. 34; 544, l. 10.)" (Italics ours.)

The obvious purpose of the United States is to have it understood that by these three acquisitions the defendants ac-

quired control of all the leveling machines and that as a result of these acquisitions the United Company is "now" following the practice of putting out its leveling machine for welt shoes "only as an auxiliary machine."

This is entirely unfair. The leveling machines acquired by these three transactions were all put out by the United Company through its General Department (Defs.' Ex. 228, R. Vol. 5, p. 436) and, therefore, have at all times been offered for sale, although until recently they could also be taken on lease if the manufacturer desired; and the leveling machine for welt shoes has always been put out by the United Company in the same manner that it was always put out by the Goodyear Company, except that the United Company discontinued the initial payments. It should further be noted that the dates of these transactions were, respectively, March 16, 1900, February 2, 1901, and April 30, 1908.

That the United Company did not acquire any monopoly of leveling machines by these three transactions is shown by the lists of machines of competitors furnished for leveling McKay, welt, and turn shoes, which will be found in Defendants' Exhibit 235 (R. Vol. 5, pp. 587, 625, 664).

Seaver Process Lasting Company (Brief for the United States, p. 68).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 19–20.)

The United States alleges (p. 68) that the United Company acquired the business and assets, including Letters Patent, of the Seaver Process Lasting Company "engaged in manufacturing *lasting* machines and *pulling-over*

machines" (italics theirs), and that the Seaver Company was then insolvent. The United States further alleges that "The Seaver Company was the only company putting out lasting machines in 1899, except the Goodyear and Consolidated Companies," that "It had also a pulling over machine; as had the United Company," and that no other pulling-over machine except the United Company's pulling-over machine is now offered by any American manufacturer.

The United States concludes (p. 68): "The result of this acquisition, then, was to remove the final vestige of competition in lasting machines, and to shake off the possibility of competition in pulling over machines."

The United States ignores the testimony showing that the Seaver Company's pulling-over machine was experimental and unsuccessful, but that it embodied inventions indispensable to a successful pulling-over machine and which have always since been embodied in the United Company's pulling-over machines; that the Seaver patents barred the way to further development of the United Company's experimental pulling-over machine upon which hundreds of thousands of dollars had already been spent; and that that was the reason for the purchase.

The Seaver Company's lasting machine infringed two of the United Company's patents, and suits were pending. It was "unable to continue its business or to pay its debts" (P.'s Ex. 75, R. Vol. 3, p. 591). In all respects the machine was inferior to the United Company's lasting machines. Obviously, any competition which the Seaver lasting machine offered or promised was entirely negligible.

The only important fact is that the United Company acquired the valuable inventions which prevented further development of its experimental pulling-over machine.

Corrugated Wire Fastening Company (Brief for the United States, pp. 68–69).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 9–10.)

The United States alleges (p. 69) that the United Company acquired a majority of the capital stock of the Corrugated Wire Fastening Company "engaged in the manufacture and sale of a tacking machine and corrugated wire." It further states that "Howard testified that the United Company had a machine for performing the *same* character of work as the one obtained from the Corrugated Company," but that "the machine was 'out of date'" (italics theirs). The United States says that this is discredited by Howard's further statement that the United Company continued to supply wire and parts for those machines and have parts in stock to-day. In other words, the United States aims to give the impression that the Corrugated Company was competing with the United Company.

But the United States does not fairly state the evidence. Mr. Howard testified that the Corrugated Company had formerly put out a tacking machine, but

> "had not put out any of the machines for some years because it was completely out of date,"

and that

> "there was no longer any demand for the machines, so that no business was done and no business could be done with that machine";

and further that

> "the only business that was left when the Corrugated Company was acquired was the supplying of wire and spare parts for the machine" (R. Vol. 1, p. 42, lines 15–16, 28–33).

The fact that the United Company was still keeping in stock parts for that old machine was simply due to their practice of keeping spare parts on hand for old machines so long as there is one of them in use anywhere.

The business of the Corrugated Company was characterized by the District Court as "making wire and spare parts for use in an obsolete metallic-fastening machine" (Dodge, J., R. Vol. 1, p. 1138).

Globe Sewing Machine Company (Brief for the United States, pp. 69–70).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 30–31.)

The United States says (pp. 69–70) that the Globe Company was manufacturing a welting machine, an outsole stitching machine and an experimental rough rounding machine, and that "by this acquisition a possible competitor in welt method machines was removed." The United States also refers to the fact that the absence of a rough rounder is claimed by defendants to have been a weakness in Plant's line of machines.

The facts were that the Globe Company's machines were not successful; that they all infringed United Company's patents; that infringement suits were pending and that the Globe Company was in debt to an amount over $90,000. The United States omits to mention any of these facts.

The United States also ignores the evidence that the purposes of this transaction were to acquire control of patents which prevented development of one of the United Company's machines, to settle the existing patent litigation and to avoid further patent litigation.

The United States says that Mr. Howard testified that the Globe Company was *manufacturing* its machines. The record shows that that company was not doing any manufacturing and that such machines as they had put out had been built by others under contract. It is entirely clear from the record that the business of the Globe Company was negligible and that its unsuccessful machines did not offer even potential competition.

Ross-Moyer Manufacturing Company (Brief for the United States, pp. 70–71).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 25–28.)

The United States aims to give the impression that the United Company was putting out machines for performing the same operations as the machines of the Ross-Moyer Company and that the Ross-Moyer Company was a competitor.

The fact is that with a single exception the United Company had no machines for doing the same work as the nineteen machines acquired from the Ross-Moyer Company.

The United States omits any reference to evidence showing that the nineteen machines acquired from the Ross-Moyer Company were the foundation of the United Company's General Department and enabled the United Company for the first time to put out machines for performing the work done by the Ross-Moyer machines.

The United States also omits any reference to the evidence showing that an important reason for this transaction was the desire of the United Company, in extending its service

and establishing its own agencies, to do the fair thing by the Ross-Moyer Company which had formerly been agent for the United Company and its predecessor companies in Cincinnati and Chicago. Instead of taking that business away from the Ross-Moyer Company the United Company acquired that company and established its agencies in the Ross-Moyer offices.

The record also shows that an additional reason for this acquisition was to secure for the United Company the services of Mr. Ross to represent its interests in the middle west. After the acquisition Mr. Ross became the company's general agent in the West.

Edwin Theophilus Freeman (Brief for the United States, pp. 71–72).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 13–14.)

The United States obviously desires to have it understood that Freeman was engaged in the business of manufacturing and putting out nailing machines, in competition with the United Company.

The facts are that Freeman had constructed an experimental machine known as a "slugging machine" which "was intended to insert the slugs or ornamental fastenings which are driven around the edge of a top lift of a heel for ornamental and wear resisting purposes" (R. Vol. 1, p. 44, lines 26–29); that Freeman had not put out any machines, had no factory and was doing no business.

One of the United Company's machines infringed one of Freeman's patents, and there was an interference in the Patent Office between applications owned by the respective

parties, while, on the other hand, the Freeman machine infringed the United Company's patents.

The purpose of the acquisition was to clear up these serious patent complications and to enable the United Company to improve its machines without infringing Freeman's patents. Freeman's inventions have since been embodied in three different machines put out by the United Company.

Albert G. Brewer (Brief for the United States, p. 72).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 15–16.)

While in its statement about this transaction the United States sets forth that Brewer's machine was only experimental, that the United Company had an experimental machine which was not commercial, and that Brewer's inventions were subsequently embodied in the United Company's machine, it omits to mention the evidence that the United Company's experimental machine was not successful until after the Brewer invention had been embodied in it and that the Brewer mechanism was much superior to that which the United Company was using before.

That no potential competition was offered by the Brewer machine is shown by the fact that Brewer's experimental machine infringed fourteen claims of a broad patent owned by the United Company.

American Sole Laying Machine Company (Brief for the United States, pp. 73–74).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 38–40.)

This transaction took place after that with the Boot & Shoe Sole Laying Company, although the United States discusses it first.

The United States sets forth (pp. 73–74) that the American Company was engaged in putting out sole laying machines and that Howard testified that "the United Company was engaged in manufacturing and putting out machines for laying the soles of boots and shoes, although he claims that the United Company's machines were inferior to those of the American Sole Laying Company."

The United States evidently wishes it to be understood that the object of this transaction was to remove competition.

The United States omits any reference to the evidence that the United Company was then putting out a sole laying machine which operated upon only one shoe at a time, while the American machine was a double form machine which operated upon two shoes, rights and lefts, at the same time, and that the American Company had patent rights which prevented the United Company from making a double machine which would be twice as fast as the machine it then had.

The American Company's patents also prevented the United Company from adopting a satisfactory pad for its sole laying machine and further prevented necessary development of the Atlas leveling machine.

Immediately after this acquisition the United Company combined its sole laying machine and the American machine, making a better machine than either, which operates twice as fast as its old machine.

Boot & Shoe Sole Laying Company (Brief for the United States, p. 74).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 8–9.)

This transaction preceded the American Company transaction last discussed and it took place in June, 1899, not in May, 1901, as stated by the United States.

The United States sets forth (p. 74) that the Boot & Shoe Sole Laying Company was engaged in manufacturing and putting out a sole laying machine and says (p. 74) that Howard testified that "the United Company was then engaged in putting out a machine for doing *similar* work, although he claims that the United's machine was inferior to the machine acquired" (italics theirs). Apparently the United States would give the impression that there was competition between the sole laying machines of these companies and that the object of this transaction was to remove that competition.

The facts are that the United Company's machine, which was of a different type, was very unsatisfactory because it was continually breaking down and because it was only adapted for large factories. It was discarded after this acquisition, and the machine of the Boot & Shoe Sole Laying Company was thereafter put out by the United Company as its standard commercial machine.

A further reason for this acquisition was that the United Company wished to use a pressing form which it had produced, but that form infringed a patent owned by the Boot & Shoe Sole Laying Company. After the acquisition it used that form in connection with the acquired machine.

The record further shows that the business of the Boot &

Shoe Sole Laying Company was very small, and that such machines as it put out were manufactured for it by others.

Accordingly it is clear that the United Company made this acquisition to obtain a machine for performing an operation for which it did not have a satisfactory machine and to enable it to use an improved mechanism without infringement,—and for no other purpose.

J. K. Krieg & Company (Brief for the United States, pp. 74-75).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 46–48.)

The United States says (p. 75) that "Howard testified that the Krieg Company was engaged in putting out a heel-seat rounding machine, a Louis heel-scarfing machine, and two or three types of embossing machines; that the United Company at that time was putting out a heel-seat rounder and a scarfing machine *of different types;* that the United Company was also engaged in putting out embossing machines" (italics ours). The United States adds that Winslow testified "that the Krieg Company had also been agent for some of the old companies that became a part of the United."

This statement by the United States is misleading in its plain implication that the principal business of the Krieg Company was putting out the three machines named and in its characterization of the United Company's machines as merely "of different types."

The facts are that J. K. Krieg & Company had been local agents for parts and supplies for the United Company's machines except the Goodyear machines, having previously been agents for the Consolidated and the McKay Companies, and their business in the two or three machines

which they had was very small and merely incidental to their business as agents for the United Company.

The important reason for this transaction was that in following its policy of greatly improving its service the United Company desired to establish its own agency in New York and in so doing to treat the Krieg Company fairly. This is explained in the discussion of the Ross-Moyer Company (*supra*, pp. 195–196) and more fully in the Appendix to main brief, pages 26–27.

As to the heel seat rounder and scarfing machine "of different types," which the United States says the United Company was putting out, the heel seat rounder was merely an edge trimmer with a larger cutter, which wasted leather. The Krieg machine, specially designed for heel seat rounding, saved the pieces of leather which it removed and thus effected a considerable economy. The United Company "had no machine of that kind before" (R. Vol. 1, p. 93, lines 7–8).

The Louis heel scarfing machine of the Krieg Company and the spring-heel scarfing machine of the United Company were specially constructed for entirely different uses, and neither could possibly be used for the work of the other (R. Vol. 1, p. 60, lines 35–41; p. 93, lines 11–21).

The Krieg embossing machines were simple machines for ornamenting upper stock or stamping the inside of the upper of a shoe. They were of no importance, and the real effect of this transaction, as regards the merely incidental acquisition of machines, was clearly the acquiring of machines for doing work for which the United Company had no machines.

Joseph P. Curtis (Brief for the United States, pp. 75–76).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 48–49.)

The United States sets forth that by this transaction the United Company acquired the business of Curtis relating to cementing machines and says that Howard testified that the United Company was putting out a cementing machine, but for performing an entirely different operation.

The facts are that Curtis was not engaged in business, and that the United Company acquired from him nothing but certain patent rights relating to a machine for cementing a piece of fabric to an upper. The United Company had no machine which could be used for that work, nor could the Curtis machine be used for the same work as that performed by any machine of the United Company.

The George A. Smith Machinery Company (Brief for the United States, p. 76).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 42–43.)

The United States says (p. 76) that "Howard testified that the Smith Company at the time of its acquisition was putting out a spring-heel scarfing machine, and that at the time the United Company was not putting out a machine for doing similar work. He further testified that the Smith Company had also been acting as agent prior to 1899, for certain of the companies that made up the United Company."

This statement alone shows that this transaction was perfectly normal and lawful, but even at that the state-

ment does not give a correct picture of the transaction. The Smith Company had a store in Philadelphia; it employed one man repairing second-hand machinery; and the one machine which it put out, the Boss spring-heel scarfing machine, was manufactured for it in outside machine shops. The United Company had no machine for doing the work which that machine of the Smith Company would do.

Also Smith, like the Ross-Moyer and Krieg Companies, had formerly been agent for the United Company, and the real purpose of the transaction was to make a fair arrangement with him in connection with extending the United Company's service and establishing its own agency in Philadelphia, as is fully explained in the Appendix to main brief, pages 42–43. The acquisition of the one machine was merely incidental to that arrangement.

Arnold Machine & Supply Company (William B. Arnold (Brief for the United States, p. 77).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 55–56.)

The United States sets forth (p. 77) that the Arnold Company was manufacturing and putting out cementing machines and says that Howard testified that "the United Company was engaged in putting out *cementing* machines, but he claimed that they were not adapted for work similar to that of the Arnold machine" (italics theirs). This statement is inadequate and is obviously intended to give a wrong impression. Mr. Howard testified that the Arnold machine had to be specially constructed for its particular use and that it was not useful for any other

operation, while the United Company had no machine which could possibly be used for performing the operation of the Arnold machine (R. Vol. 1, p. 64, lines 43–46; p. 65, lines 7–14).

By this transaction, accordingly, the United Company was merely entering a new field.

The United States says (p. 77) that Arnold made a covenant that he would convey to the United Company "any inventions relating to shoe machinery he might make." This is a gross misstatement. The covenant was limited to "cementing machinery or devices," that is, the subject-matter of the transaction, and it was also limited to a period of fifteen years (P.'s Ex. 113, R. Vol. 4, pp. 816, 817).

Booth Brothers (Brief for the United States, pp. 77–79).

(The facts of these transactions are set forth in the Appendix to main brief, pp. 57–58, 63–65.)

The United States has discussed under this heading two separate transactions which are set forth in the petition (R. Vol. 1, pp. 1015, 1016) as separate transactions.

(1) The United States sets forth that in October, 1904, the United Company acquired the business of Booth Brothers relating to perforating machines. (The consideration is stated (p. 77) as $24,000 and a royalty; in fact, it was $2,400 and a royalty.)

The United States says (p. 78) that "Howard testified that the United Company was engaged in putting out a *perforating* machine which could be used for the same operation as the Booth machines, although he claimed that it was not *intended* for the same operation" (italics

theirs). This is a distorted statement of Mr. Howard's testimony. He said that the United Company's machine was a gang machine adapted for perforating tips and that it could not be used to do the work done by the Booth machine, which was a single-tool, step-by-step machine, adapted and used for perforating the edges of vamps (R. Vol. 1, p. 65, lines 26–42).

It cannot be questioned that by this transaction the United Company was merely entering an entirely new field by acquiring a machine for performing an operation for which it had no machine before.

(2) The United States sets forth that in November, 1907, the United Company acquired the entire remaining business of Booth Brothers and says (pp. 78–79) that Howard testified that the United Company then acquired "a fudge edge-making machine, a *wheeling* machine, a stitch burnishing machine, an upper-shaping machine and a *beating* machine" (italics theirs), and that "he further testified that the United Company at that time had a *wheeling* machine and an upper-beating [beading] machine" (italics theirs).

This statement is obviously intended to convey the impression that the United Company was competing with Booth Brothers in respect to two of the four machines acquired, namely, wheeling machine and upper beading machine. But the United States has told only a part of the story. Mr. Howard testified that the Booth wheeling machine was used on Goodyear work and that the United Company's machine was adapted only for use on McKay sewed shoes with a mock welt (R. Vol. 1, p. 84, lines 24–29). Mr. Howard further testified that the United Company's upper beading machine "was satisfactory on heavy work,

but not for light or medium work," and that the Booth Brothers machine "was a much better machine for light work" (R. Vol. 1, p. 69, lines 12–13; p. 84, lines 42–44). Mr. Howard also testified that the United Company had no machines for doing the work of the other two Booth machines (R. Vol. 1, p. 69, lines 13–14).

Accordingly by this transaction the United Company merely entered a new field by acquiring machines for performing operations for which it previously had no machines.

Fred H. Perry (Brief for the United States, p. 79).

(The facts of this transaction are set forth in the Appendix to main brief, p. 49.)

The United States sets forth (p. 79) that Perry made an agreement by which he "agreed to convey to that company all inventions which he should make relating to shoe machinery for a period of five years from the termination of his employment by the United Company."

The United States fails to explain that Perry had previously been employed by the United Company as a machinist, that at his own request he was given the opportunity to enter the inventive department of the company, and that the agreement made with him was merely an employment contract with an inventor.

That covenants to assign future inventions in contracts employing inventors are normal and legal is established by the decisions discussed on pages 472–474 of the Brief for Appellees.

Boston Shoe Tool Company (Brief for the United States, pp. 79–80).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 12–13.)

The United States alleges (p. 79) that the United Company acquired the business of Timothy A. Bresnahan, "engaged in manufacturing and putting out machines, tools, and appliances used in the manufacture of shoes, together with the entire capital stock of the Boston Shoe Tool Company."

The failure of the United States to indicate the nature of the business in which the Boston Shoe Tool Company was engaged is significant. It was, in fact, manufacturing and selling an edge trimming machine and an edge setter, both machines of General Department type, and it was making and selling cutters for use on the edge trimming machine and edge setting irons for use on the edge setter. At this time the United Company was not manufacturing any edge cutters or any edge setting irons, and it had no machines for doing the work of either machine acquired from the Boston Shoe Tool Company.

It is plain that by this acquisition the United Company was merely enlarging its field.

Globe Shoe Tool Company (Brief for the United States, pp. 80–81).

(The facts of this transaction are set forth in the Appendix to main brief, p. 17).

The United States sets forth (p. 80) that the Globe Company was "engaged in manufacturing and putting out edge cutters and irons used in the manufacture of shoes."

It is true, as stated by the United States, that the Boston Shoe Tool Company, previously acquired, was also putting out "edge cutters and irons."

But the United States does not refer to other important testimony regarding this transaction. The record shows that this concern was acquired at the earnest solicitation of the partners and because the United Company desired to obtain the services of one of the partners, Mr. Loomer, as the head of its department for manufacturing such tools. Plaintiff's Exhibit 72 (R. Vol. 3, p. 581) recites that employment by Loomer had been agreed upon "as an inducement to the United Company to take over said business and to purchase the property and assets of said partnership."

Also, the Globe Company was infringing two of the United Company's patents.

It is further important to note that after this acquisition very large reductions were made by the United Company in the prices of tools such as the Globe Company was making. Details are stated on page 17 of the Appendix to main brief.

In respect to the covenants in the agreements with Loomer and Perkins which the United States sets forth, it is important to note that *both* Loomer and Perkins entered the United Company's employ, and that *no covenants* were taken from the other three partners, who did not enter the employ of the United Company.

John Ritchie, and John Ritchie Company (Brief for the United States, pp. 81–82).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 18–19.)

The United States alleges (p. 81) that the United Company acquired "all the business of John Ritchie, and John Ritchie Company, a corporation, relating to the manufacture of standard screw machines, slugging machines, tacking machines," etc.

It is obviously the intention of the United States to give the impression that John Ritchie and John Ritchie Company were engaged in the *manufacture* of metallic fastening machines. That is not the fact.

The facts shown by the record are: The Ritchie Company was not engaged in *manufacturing machines* but was engaged in the manufacture of *boots and shoes*. It had one machine for the manufacture of *wire*. The metallic fastening machines which are referred to in the agreement relating to this transaction were being *used* by the Ritchie Company, and they were immediately leased back to them by the United Company (R. Vol. 1, p. 46, lines 15–30; P.'s. Ex. 74, Vol. 3, pp. 586, 587, 589, 590; Defs.' Ex. 231, Vol. 5, p. 475).

Again, the United States alleges (pp. 81–82) that "the purpose of defendants to force shoe manufacturers to deal exclusively with the United Company" is well illustrated by Mr. Winslow in Defendants' Exhibit 231 (R Vol. 5, p. 475) where it states that the reason for this transaction "was to prevent manufacturers who held Metallic Machinery under lease from the United Company (and who had agreed to purchase their metallic fastening material from the United Company), violating their leases and contracts by purchasing material from Ritchie."

The United States does not refer to the evidence that the John Ritchie Company had one machine for making standard screw wire and that they were selling wire to

lessees of the United Company's metallic machines who had agreed to buy fastening material from the United Company in payment of royalty for the use of the machines; that in such cases of course the United Company got no return for the use of its machine; and that the purpose of the transaction was to remove that dishonest situation.

It should further be noted that the United States has not raised any question in this suit as to the propriety or legality of the provisions of the metallic leases providing for payment for use of the machines through purchase of fastening material.

Stanley Manufacturing Company (Brief for the United States, pp. 82–83).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 21–23.)

On the face of the statement by the United States, the United Company simply acquired certain machines, parts and supplies which the Stanley Company, engaged in business at Lawrence, Massachusetts, had on hand at Frankfurt, Germany.

The United States omits any reference to testimony showing that the United Company had no machines for doing the work of any one of the miscellaneous General Department machines which the Stanley Company was putting out and that the agreement amounted simply to an agency contract.

The United States quotes at length the covenant made by the Stanley Company not to compete in foreign countries, but it omits to refer to the covenants in the same agreement (P.'s Ex. 78, R. Vol. 3, pp. 621–622) which provided:—

(1) "that the said United Company shall use its best endeavors to sell in foreign countries, machines made by the said Stanley Company . . .;"

(2) that in case the United Company should discontinue the purchase from the Stanley Company and sale

> "of any of the machines, parts or supplies made by the said Stanley Company . . . the said Stanley Company may then and thereafter sell such machines, parts or supplies thus discontinued to any and all persons without respect to the country to which they are to be sent;"

and

(3) "That the said Stanley Company may advertise and create and maintain in all proper business ways a demand for its machines in any and all countries in the world."

The United States (p. 83) characterizes as "a somewhat similar transaction" the agreement with W. J. Young. This transaction was similar only in the respect that it related solely to business in foreign countries. The facts of the Young transaction are set forth in full on pages 40–42 of the Appendix to main brief.

Bay State International Shoe Machinery Company (Brief for the United States, p. 83).

(The facts of this transaction are set forth in the Appendix to main brief, p. 28.)

The United States sets forth that the United Company acquired for its French and German companies "the property and good will for the Continent of Europe of the Bay

State International Shoe Machinery Company" for $25,000 in preferred stock of the United Company. It further states that Howard testified that the Bay State Company "'had a welter and stitcher and I think *a rough rounder*' but that he did not know whether it 'was shipping machinery from the United States to foreign countries'" (italics theirs).

The United States omits to state that after further investigation Mr. Howard testified that the machines of the Bay State Company were manufactured in Montreal, Canada; none whatever in this country. Other important facts, as shown by the record, which the United States does not mention, are that the machines of the Bay State Company were very different in construction from and distinctly inferior to the United Company's machines; that it had done business only in England and had put out only ten sets of its machines in England; that its machines infringed the United Company's English patents; and that the purchase was made at the earnest solicitation of the people interested in the company, who were also customers of the United Company, as the cheapest way to dispose of the litigation.

George W. Emerson & Company (Brief for the United States, pp. 83–84).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 43–45.)

The United States says (p. 84) that Howard testified that the United Company acquired from the Emerson Company a power spring-heel scarfer and a heel burnishing machine and that at that time the United Company

was "putting out a heel-burnishing machine but of a different type from that put out by the Emerson Company, and that the United Company was also putting out a spring-heel scarfing machine to be operated by hand."

The United States omits to make any reference to the following important facts:—

The principal business of the Emerson Company was manufacturing and supplying lasts and forms to be used for sole leveling machines of the "Giant" type, and the United Company was developing a leveling machine on which lasts and forms were used.

The Emerson Company had a tip scourer used in repairing the tips of patent leather shoes. The United Company had no tip scourer (R. Vol. 1, p. 58, lines 24–25; p. 95, lines 1–3).

The Emerson heel burnishing machine was of a different type and performed its operation in an entirely different way from the United Company's machine. Some manufacturers insisted upon one type of machine and others upon the other type. The Emerson Company's machine infringed numerous important claims in two patents controlled by the United Company.

An important object of the transaction was to obtain the services of William R. Sampson, the active man in the Emerson concern.

Another object was to settle the pending litigation.

Joseph W. Leary (Brief for the United States, pp. 84–85).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 49–50.)

The United States sets forth that the United Company ac-

quired from Joseph W. Leary, of Lynn, Massachusetts, "his business of manufacturing and dealing in shoe machinery."

This statement is very misleading. Leary was doing no manufacturing of any kind. He employed no men and had no factory. He was principally engaged in retailing cements and blackings, and he also dealt in a very small way in second-hand sewing machines for sewing together the parts of shoe uppers.

Leary was also local agent for the United Company's Amazeen skiving machine. He was extremely capable and successful as salesman, and the United Company desired to obtain his services in a wider field. He stated that he would enter its employ if the company would buy his stock of cement and second-hand machinery, and he was paid $3,052 for the small stock that he had.

The United States alleges (p. 85) that Leary "agreed to convey to the United Company all improvements which he should make within 10 years from the date of the termination of his employment with the United Company."

In fact, Leary made no covenant whatever to assign any future improvements. On the contrary, the Leary agreement (P.'s Ex. 108, R. Vol. 4, p. 768) specifically provided that Leary should "not be required to disclose his secret formulæ for making cements, blackings or stains."

Zachary Taylor French (Brief for the United States, pp. 85–86).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 53–54.)

The United States alleges that the United Company "acquired the business of Zachary Taylor French, Boston,

Mass., engaged in the development of machines designed and used in the manufacture of boots and shoes."

The testimony to which the United States then refers shows that the United Company did not acquire any "*business*" from French but that the transaction was merely an agreement commuting obligations to pay royalties which would become due under various existing contracts.

The United States omits to explain that these contracts had all been made with the Goodyear Company prior to 1899 and that the agreement was made because French desired to have his royalty contracts placed upon a definite basis of annual payment.

Kimball & Hadley (Brief for the United States, pp. 86–88).

(The facts of this transaction are set forth in the Appendix to main brief, pp. 54–55.)
